# TopScreen interface

Permits fingertip control with a single button that changes colour according to wash phase. Programs, temperatures, time to end of cycle and other information, as selected by the user, are shown on the LCD display which also shows user alerts such as door not tightly closed, salt and chemical product low condition and other messages. This system overcomes the restrictions of conventional digital interfaces, without the complications and limited ease of use of a touch screen.

The Smart Button changes colour according to machine status: flashing green, machine heating; steady green, machine ready; blue, wash cycle in course.

## ProGrams for TopScreen interface

Permit extremely versatile operation combined with maximum ease of use: highly specialised, specifically tailored cycles make it possible to deal effortlessly with an everyday mix of wash-ware, from fine glassware to plates and pans.

There are three basic programs (standard, intensive, long) and the user can also choose one of the ProGrams cycles with the possibility of modifying selection at any time:

### ProClean (self-clean)

Washes the wash chamber, hydraulic circuit and drains the tank and boiler (80% of contents).

### ProLong (continuous)

Increases wash time by up to 12' with the possibility of manual interruption and automatic activation of the rinse phase.

### ProSan (sanitation)

Thermal disinfection cycle in accordance with EN ISO 15883-1/3; A0 level adjustable between 20 and 60. Washing is carried out at 72 °C and rinsing at 85 °C. Cycle time is regulated electronically and depends on the A0 value selected (with A0 = 30, approx. 12').

### ProGlass (glasses)

Specific program for glasses of particular shape; cycle time is extended, rinsing increased by 20% at an optimal temperature of 65 °C.

### ProPlates (dishes)

Specific cycle for plates; rinsing is reduced by 17% and temperature is brought to an optimal 78 °C.

### ProAct (intensive)

Heavy duty cycle for washing utensils and small pans, comprising a prewash phase followed by elimination of food soil from the bottom of the tank, a chemical degreasing phase and final washing at high temperature (65 °C) with rinsing at 78 °C. Water consumption is 5 litres.

### ProSteel (cutlery)

Cutlery cycle comprising several washing phases at increasingly higher temperature up to 70 °C and a final rinse phase at 85 °C. Water consumption is 5.5 litres/cycle and cycle time around 6 minutes.

### ProGreen (ECO)

Reduced energy consumption, environment-friendly cycle. Operates at lower wash and rinse temperatures (50 °C and 65 °C) with an increase in cycle time and a 13% reduction in CO<sub>2</sub>.

### ProNew

Clean water wash cycle, with complete drainage and replacement of tank water. Ideal for incompatible food soils such as milk and beer glasses or for quick water refresh.

### ProWater

Specific cycle for washing glasses with osmosis water. Designed to operate with the WS140 reverse osmosis filter using the Pro-Wash Crystal detergent and ProRinse Crystal rinse aid. All parameters are modified to optimise final results on the glasses.

# ProSmart interface

Permits finger-tip control of dishwasher main functions. A generously-sized four-digit display facilitates selection of the programs held in the memory and also displays wash and rinse temperatures and system self-diagnostic messages, to facilitate servicing, and the number of racks washed. Correct functioning of the machine can be monitored according to the colour (green, orange or red) of the Check-Bar.

The Smart-Bar indicates current machine status (ready, heating, in use) and progress of the cycle according to changes in colour and size. Functioning parameters and temperatures can be personalised and dispensers can be software regulated, entering the dose required directly in g/l.

## Special programs for ProSmart interface

Permit extremely versatile operation combined with maximum ease of use: highly specialised, specifically tailored cycles make it possible to deal effortlessly with an everyday mix of wash-ware, from fine glassware to plates and pans.

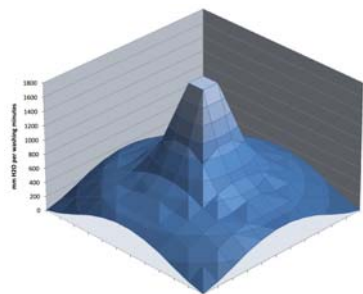

There are three basic programs (standard, intensive, long) and the user can also choose one of the Special programs with the possibility of modifying selection at any time:

	<b>ProLong</b> (continuous) Increases wash time by up to 12' with the possibility of manual interruption and automatic activation of the rinse phase.		<b>ProGlass</b> (glasses) Specific program for glasses of particular shape; cycle time is extended, rinsing increased by 20% at an optimal temperature of 65 °C.		<b>ProPlates</b> (plates) Specific cycle for plates; rinsing is reduced by 17% and temperature is brought to an optimal 78 °C.
	<b>ProGreen</b> (ECO) Reduced energy consumption, environment-friendly cycle. Operates at lower wash and rinse temperatures (50 °C and 65 °C for washing and rinsing) with an increase in cycle time and with a 13% reduction in CO <sub>2</sub> .		<b>ProSelf</b> Semi-automatic self-clean program which washes only the wash chamber.		<b>ProWater</b> Specific cycle for washing glasses with osmosis water. Designed to operate with the WS140 reverse osmosis filter using the ProWash Crystal detergent and ProRinse Crystal rinse aid. All parameters are modified to optimise final results on the glasses.

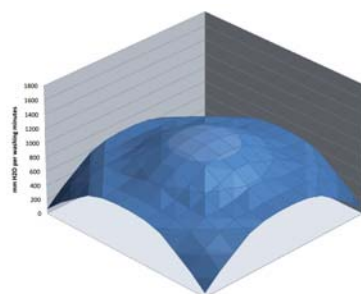

## Equalizer<sup>2</sup>

The lower arm sprays water from the bottom up and the upper arm from the top down. The use of identical arms imposes compromises that tend to reduce performance. Colged adopts a steel lower spray arm with high pressure nozzles and a composite material (acetal resin with talc and fibreglass) upper arm with high power nozzles.

Their light weight offsets the difference in hydraulic power due to the longer length of the circuit, facilitating rotation. Uniform distribution of the water is guaranteed with also an improvement in cleaning power, for example, on the back of soup plates.

Water distribution with conventional arms.

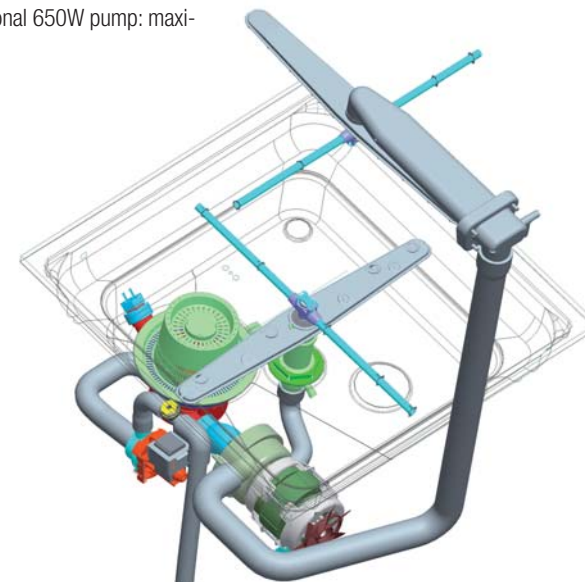

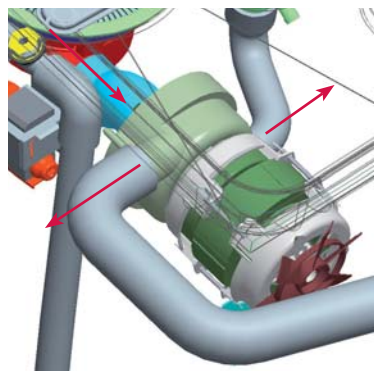

Water distribution with Equalizer<sup>2</sup>.

## DuoFlo

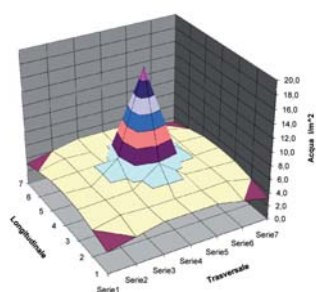

A conventional pump has an inlet (from the tank) and an outlet towards the two spray arms: the flow of water must be distributed using a T or Y connector. Our research has revealed that this is where 25 - 30% of power is lost. Colged has eliminated the problem with a simple solution: the pump has one inlet but two outlets without any T divider.

Loss is not only reduced but completely eliminated, with also a 50% reduction in noise. A 480W DuoFlo pump delivers the same performance as a conventional 650W pump: maximum efficiency and minimum energy consumption.

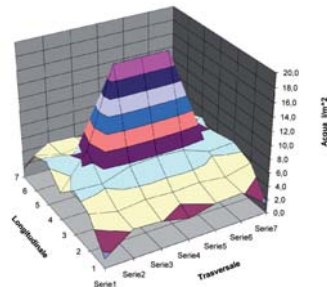

# UltraRinse<sup>2</sup>

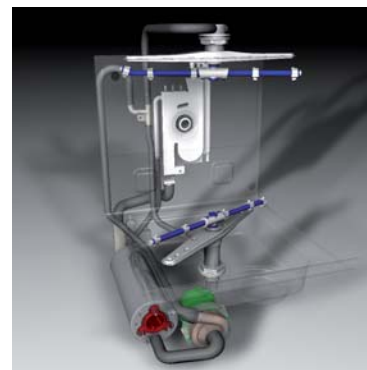

Rinse system protected by various international patents that delivers exceptional results regardless of installation conditions, with an up to 60% reduction in water consumption/cycle. To achieve this result, the entire circuit is designed to spray blades and not cones of water so that rinse water is directed towards the rack and not to the bottom of the machine. Usually, a large amount of rinse water is wasted due to losses at the central hub and useless rinsing of tank bottom and walls. UltraRinse<sup>2</sup> reduces losses from the hub and the differently-shaped co-moulded steel/resin arms do not simply spray water but deliver a powerful jet centred on the rack.

UltraRinse<sup>2</sup> rinse system.

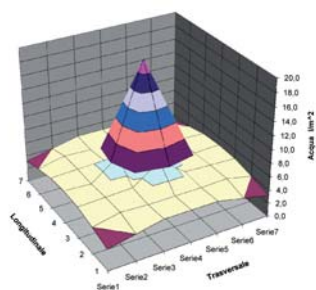

Rinsing with old generation "break tank".

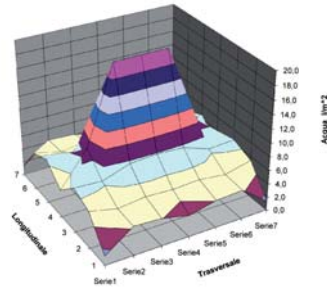

# ProRinse<sup>2</sup>

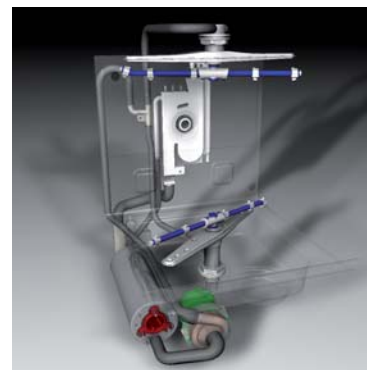

Rinse system protected by various international patents and comprising an open boiler with suction side rinse pump and water supply side constant pressure and delivery non-return Break Tank that delivers exceptional results regardless of installation conditions, with a reduction in water consumption/cycle. With conventional rinsing at 80-85 °C, temperature drops by more than 25 °C during the cycle (intake water at 10 °C). With ProRinse<sup>2</sup>, temperature remains constant, consuming less water and delivering the same results at a lower temperature with reduced power consumption.

ProRinse<sup>2</sup> rinsing.

Rinsing with old generation "break tank".

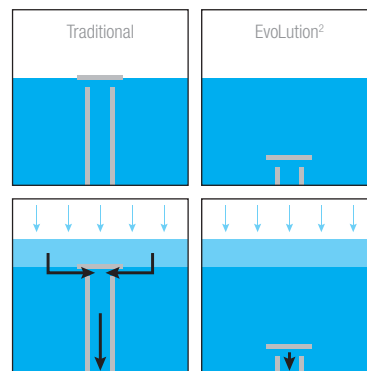

The use of stainless steel bottom spray arms with polypropylene nozzles and composite material (resin with talc and fibreglass) top spray arms guarantees balanced distribution of water. With a consumption of 2.3 litres/cycle (in dishwashers with 50x50 cm rack), more water is directed towards the rack than in the case of conventional rinsing with a consumption of 3 litres.

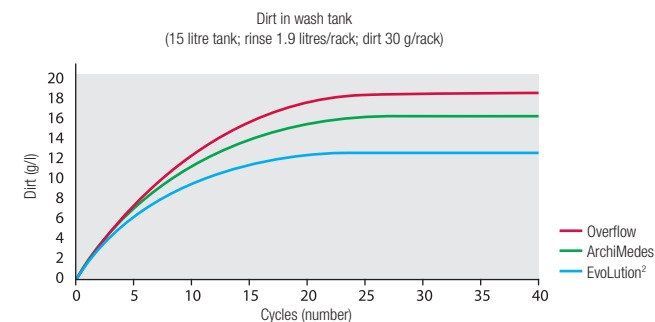

## EvoLution<sup>2</sup>

During rinsing, cold water is pumped into the tank to replace the dirty water. With a conventional gravity waste, the clean water floats on top of the heavier dirty water so that pumping in three litres, one ends up directly in the drain. EvoLution<sup>2</sup> drains water and solid particles of dirt from the bottom of the tank before rinsing, thus reducing losses and guaranteeing 100% efficiency.

The wash solution soils more slowly, water refresh is less frequent and detergent concentration can be reduced by around 20%. The drain pump and self-clean cycle of the dishwasher are standard.

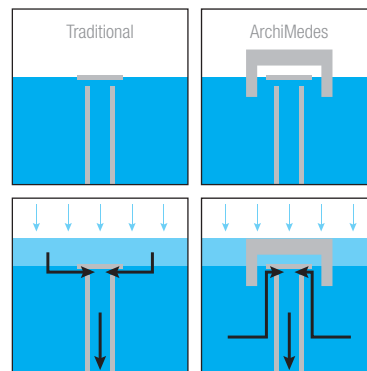

- a) Overflow: water change = 62% of the rinse.
- b) ArchiMedes: water change = 83% of the rinse.
- c) EvoLution<sup>2</sup>: water change = 100% of the rinse.

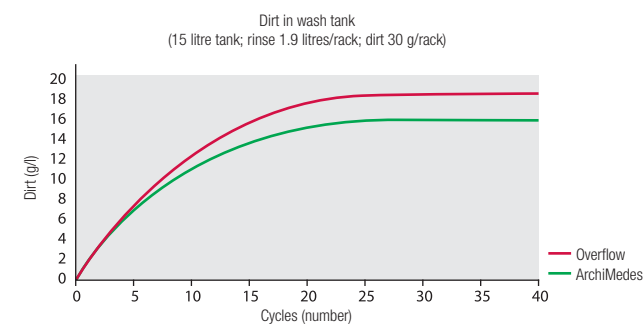

## ArchiMedes

During rinsing, clean water is pumped into the tank to replace the dirty water. With a conventional gravity waste, the clean water floats on top of the heavier dirty water so that pumping in three litres one goes directly to the drain. ArchiMedes, a Colged patent exploits the principle of communicating vessels, reducing losses by 38% to 17%.

The water is forced towards the bottom of the tank, also discharging part of the built-up particles of dirt. The wash solution soils more slowly, water refresh is less frequent and detergent concentration can be reduced by around 10%. The drain pump is optional.

- a) Overflow: water change = 62% of the rinse.
- b) ArchiMedes: water change = 83% of the rinse.

# SoftStart

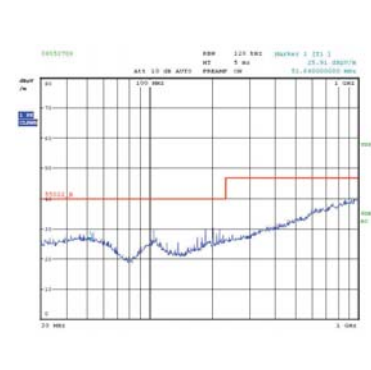

System that controls wash pump power in the start-up phase. The initial jet is delivered at lower power to avoid chipping or breaking of dishes and then gradually increased to normal washing force.

# SilentPlus

A comfortable working environment is essential for a good quality of life and noise is one of the factors that can be considerably reduced. Colged dishwashers are particularly advanced from this point of view: the intrinsic silent operation of the Equalizer<sup>2</sup> dual flow pump and full double skin construction contribute to reducing sound pressure to only 59 dB (for the undercounter models), four times lower than a conventional dishwasher.

This is the sound level normally generated by offices activities. Colged dishwashers also comply with all related standards, including stringent regulations on electromagnetic emissions. For Colged, safety means safety of the user, inherently safe design and production processes and safety of the environment.

## SmartClean

"If there is no dirt, there is no need to clean it". This is the underlying design concept of the SmartClean system. End-of-shift cleaning operations are necessary, time-consuming and tiring. All Colged products are designed without points where food soil may accumulate: tanks, inner doors and rack guides are fully moulded and generously profiled to promote discharge of impurities and vertical edges are also rounded.

## ProSoft

Door closes with a smooth, precise motion to avoid damage to more delicate dishes even if the door is closed too sharply. Operator effort is reduced to only 3 kg, half that usually required. Rack insertion is facilitated by guides moulded in the inner panel of the door, thus reducing operator fatigue, boosting productivity and reducing accidental breakages.

## ProGlide

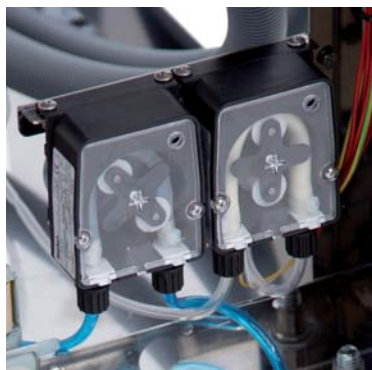

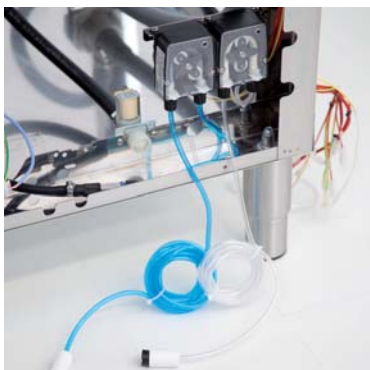

The hood slides smoothly on anti-friction guides and is activated by a system of levers, without buckling or jamming if the handle is grasped from a corner. The weight of the hood is counter-balanced and lifting force is a mere 3 kg, thus reducing operator fatigue and increasing productivity. The hood is of the double skin insulated type to reduce heat and noise emissions.

# ProChem

Electronically-regulated peristaltic rinse aid and detergent dispensers.  
Optional probes for monitoring the level of chemical products with alert on electronic display.  
The control system permits direct setting of the amount dispensed on the display.

Sensors to indicate chemical product low condition, with alert on the control panel (level switch) can also be included.

## CareFree (T)

Save hundreds of Euro a year while also protecting your dishwasher against damage caused by scale build-up, without occupying additional kitchen space and without the need for regeneration that may take tens of minutes at a frequency that depends on the hardness of the water, i.e. when a water softener is most useful. CareFree guarantees completely automatic, user-transparent regeneration during each wash cycle.

Another advantage is constant water quality as opposed to conventional softeners where water quality tends to downgrade with saturation of the resins. The device is electronically controlled and a message indicates the need to top up the salt, which takes just a few seconds. This permits use of specific detergents for soft water which are less aggressive and cost 15% less than those for hard water.

## TopTronic

With Colged easy-to-use rack conveyor dishwashers and pan washers, staff training is both fast and efficient. At the operator's request, the control system provides a complete set of information, from tank and boiler temperatures to the number of cycles performed. "Simplicity means providing the information required when required".

A limited number of highly versatile programs reduce the possibility of damage to dishes due to use of the wrong cycle, as may happen with machines with many sector-specific programs.

## AutoTimer

Electronically-controlled washing with AutoTimer system: a specific sensor detects insertion of the rack in the machine; the electronic card calculates pass-through time according to feed speed and, at the end of this time, interrupts functioning of the wash pump, of the conveyor, of drying and of all other appliances.

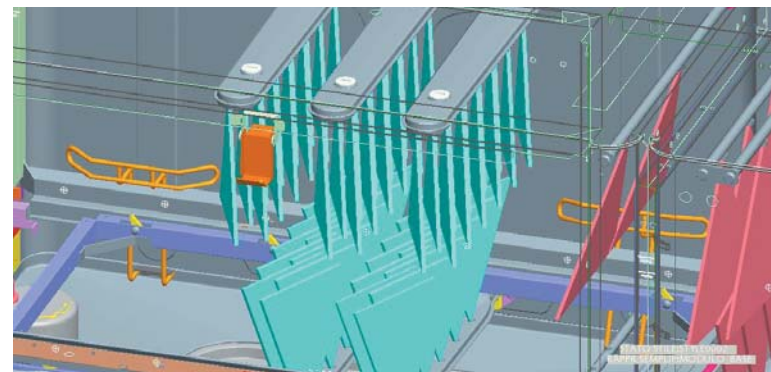

Thermostat temperature control remains active and the machine is re-activated automatically when a new rack is inserted. Electronically-controlled rinsing: a specific sensor detects the presence of the rack in the correct position and activates the flow of clean water, interrupting this as soon as the rack exits the rinsing zone, without wasting water.

# IdroWash

The HydroWash system is the core element of the rack conveyor, an evolution of that already adopted successfully for many years on all Colged rack conveyor dishwashers. HydroWash promotes a considerable improvement in washing efficiency with a reduction in power and, therefore, in consumption using special arms to deliver a powerful, balanced jet of water.

Each arm features a double row of nozzles of purpose-designed shape and direction in order to spray blades and not cones of water. This prevents the jets of waters colliding before they reach the dishes and dispersion of the energy impressed by the pump on the liquid in collisions between the drops of water, thus improving the mechanical action of food soil removal. HydroWash is another Colged useful innovation.

# UltraRinse - ProRinse

The TopTech and ProTech rack conveyor dishwashers feature a rinsing system covered by various international patents that delivers exceptional results regardless of installation conditions, with also a considerable reduction in water consumption. As no water is wasted, the amount of rinse water required is reduced, using this more effectively and efficiently.

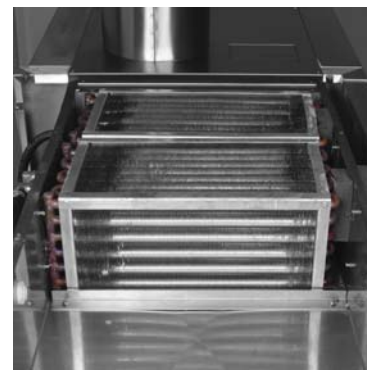

The open boiler with suction side rinse pump and intermediate break tank guarantees constant pressure, temperature and delivery of rinse water. TopTech rack conveyor dishwashers feature a rinse module dedicated to pre-rinsing of the rack prior to the last phase; therefore, the complete UltraRinse system rinses a rack with less than 1 litre of water.

# NRG heat recovery

Extracts and condenses the steam present after rinsing.  
The heat recovered increases intake water temperature by 25 °C.  
Eliminates the need for an external extraction hood, improves the working environment and also promotes considerable energy saving due to the almost 40% reduction in the temperature gradient that the boiler must provide to the rinse water.

The entire process takes only 30" at the end of the cycle and is fully automatic.  
Operator comfort is also enhanced as emission of saturated steam on opening the hood is eliminated!

# Glasswasher

---

Glasswasher

# TECH STEEL 13-00

## Benefits and features

- Electromechanical cup/glasswasher with 35x35 cm rack and useful height of 29 cm, can be furnished c/w square racks and 35 cm diameter round racks (R version).
- Can wash round racks using a specific adaptor (optional).

detergent dispenser****ArchiMedes**

## Benefits and features

- Double skin hood dishwasher with electronic interface and controls on hood.
- Useful height of 46.5 cm, can also wash plates, trays and utensils.
- Use of this machine achieves two goals: savings on energy costs for heating of cold intake water from the mains and a drastic reduction in emission of steam in the working environment, with a consequent improvement in health.
- Versatile design and availability of a wide range of service tables permit optimal use in any environment with in line installation or in a corner configuration. Features excellent, constant performance, versatility and reduced consumption.
- Water consumption for rinsing of only 2.3 l.

## Benefits and features

- Extremely versatile and efficient rack conveyor dishwasher (only 1.8 litres per rack). Can be used as normal rack conveyor machine during peak periods of work or as intermittent cycle machine, similarly to a hood or undercounter machine, during low season periods. Delivers all the productivity required, when required, without additional costs.
- Electronically-controlled double feed speed: standard washing with a productivity of 100 racks/h and heavy duty washing with a productivity of 50 racks/h for dry food soil and special uses.
- Overpressure and water hammer protection device.
- Anti-flooding door safety device.
- Standard end of travel safety microswitch.
- Motor with electronic anti-block safety device that interrupts functioning immediately in the case of jamming.

## Benefits and features

- Extremely versatile and efficient rack conveyor dishwasher (only 1.5 litres per rack). Strong points include exceptional performance and extremely low running costs, promoted by high efficiency construction technologies. Wide range of optional elements and a complete set of smooth and roller tables to set up a washing area tailored to the customer's requirements.
- Three electronically-controlled feed speeds: standard washing with a productivity of 130 racks/h and intensive washing with a productivity of 100 racks/h and heavy duty washing with a productivity of 50 racks/h for dry soil and special uses.
- Overpressure and water hammer protection device.

## Benefits and features

- Extremely versatile and efficient rack conveyor dishwasher with intensive prerinse (only 1.4 litres per rack). Strong points include exceptional performance and extremely low running costs, promoted by high efficiency construction technologies. Wide range of optional elements and a complete set of smooth and roller tables to set up a washing area tailored to the customer's requirements.
- Three electronically-controlled feed speeds: standard washing with a productivity of 220 racks/h, intensive washing with a productivity of 170 racks/h and heavy duty washing with a productivity di 80 racks/h for dry soil and special uses.
- Overpressure and water hammer protection device.
- Anti-flooding door safety device.
- Standard end of travel safety microswitch.
- Motor with electronic anti-block safety device that interrupts functioning immediately in the case of jamming.

Electronic peristaltic  
detergent dispenserElectronic peristaltic  
rinse aid dispenser

## Benefits and features

- Compact, versatile front load utensil washer, with very small footprint (50 cm), able to wash from 60-litre racks to 60x40 baking trays; accepts 50x50 racks without additional components and can be transformed into a glasswasher or dishwasher using the 24-plate maxi rack, theoretical productivity can be increased to 720 dishes/hour.
- Is the ideal solution for cake shops, bakeries and ice-cream parlours.
- Rinse water consumption of only 3.5 l per rack.
