## GENERAL

The IRIS modul 22SY686 is the control- and display-unit for radio and clock in the car. It does not work standalone.

To run this modul you have to connect the I-BUS line to the radiomodul 22DC786 (BMW C33) or 22DC986 (BMW CD33). You have to pullup this I-BUS connection with a resistor of 2,2 K $\Omega$  to permanent +.

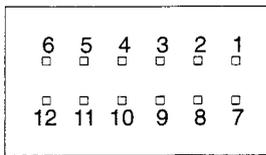

However you can run the testmodes without the I-BUS connection (see chapter Testmode)

IRIS is also designed to control BMW carradios from other sources with possibly other functions as described in this Service Manual.

## TECHNICAL DATA

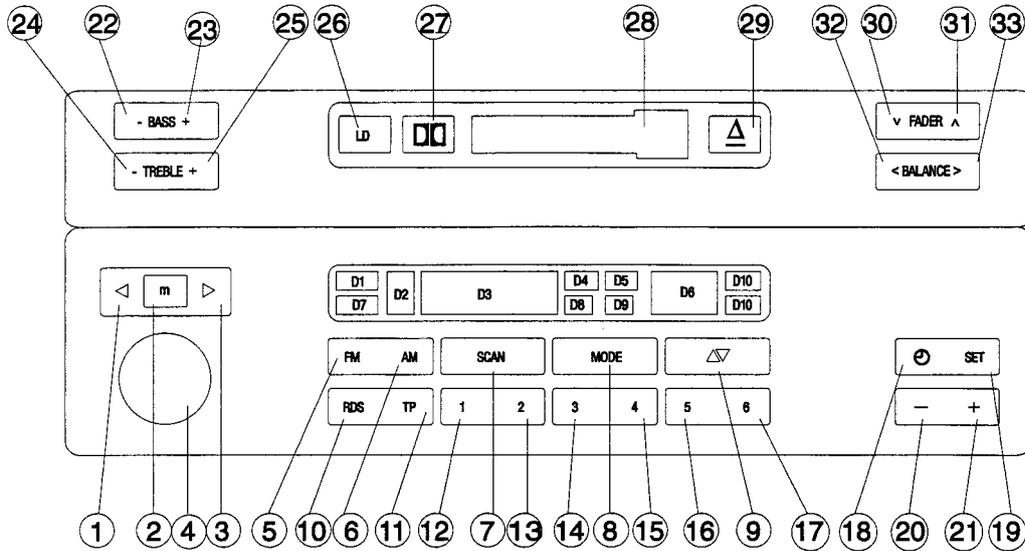

POWER SUPPLY	Voltage range:	6 V – 16 V
	Quiescent current:	< 1 mA
	Current consumption when activ, incl. illumination:	< 700 mA
DATA COMMUNICATION	Intern (MCU – EEPROM)	I <sup>2</sup> C
	Extern (IRIS – CAR)	I-BUS
MCU (P89CE558EFB)	8 Bit controller – 11,059 Mhz	
	32 KB ROM	
	1 KB RAM	
	I <sup>2</sup> C interface	
	UART interface	
	2 PWM pins	
	8 channel 10 Bit A/D converter	
EEPROM	ST24C02AM6-013TR, 256 Bytes	
DISPLAY	Full dot matrix, 65 x 7 segments	
	5 symbols with 5 x 7 segments each	
	1 colon	
	15 fixed symbols	
	U <sub>DISPLAY</sub> = 6,35 V (nom. at 25°C)	

## CONNECTORBLOCK

1	GND (31E)	7	NC
2	PERM.+ (30)	8	IGN.KEY (R)
3	EXT.ILL. (58G)	9	NC
4	DATA (I-BUS)	10	NC
5	NC	11	NC
6	NC	12	NC

## CONTROLS

### IRIS

- 1 Tuning button down
- 2 Manual Tuning
- 3 Tuning button up
- 4 On/Off and volume
- 5 Selection of waveband FM
- 6 Selection of waveband AM
- 7 Station scan, CD title scan (optional)
- 8 Mode switch
- 9 Track selection of Cassette Deck
- 10 Activation of RDS
- 11 Activation of Traffic Program
- 12-17 Preset buttons 1-6, CD selection (optional)
- 18 Request clock display
- 19 Activation of clock setting
- 20 Clock setting button down
- 21 Clock setting button up

### C33 / CD33

- 22 Sound setting bass down
- 23 Sound setting bass up
- 24 Sound setting treble down
- 25 Sound setting treble up
- 26 Loudness on/off
- 27 Activation of Dolby
- 28 Cassette / CD compartment
- 29 Cassette / CD eject button
- 30 Sound setting rear
- 31 Sound setting front
- 32 Sound setting left
- 33 Sound setting right

## DISPLAY

- D1 Indicator for of waveband, search levels, manual function
- D2 Display of selected preset button
- D3 Display of frequency, program name, cassette mode, CD number and track
- D4 Indicator for RDS
- D5 Indicator for Traffic Message Channel (currently not available)
- D6 Display of clock
- D7 Indicator for FM-Band Autostore
- D8 Indicator for traffic program
- D9 Indicator for 'Skip Blank' function (not available with C33 and CD33)
- D10 Indicator for AM/PM in 12-h clock format

## RADIO FUNCTIONS

### Mode choice

Stepping through the different modes can be achieved by repetitive pressing of the Mode button [8]:  
Tuner mode → Cassette, resp. CD mode → CD changer mode (optional) → Tuner mode a.s.o.

### Common hints to mode choice

If there is no medium (Cassette, CD-Magazine, CD) in the selected device or any malfunction is detected, the display [D3] shows an appropriate message:

- No cassette inserted: Message NO TAPE
- No CD inserted: Message NO DISC
- No magazine inserted into the changer: Message NO MAGAZINE
- No CD in the magazine: Message NO DISCS
- Faulty cassette: Message TAPE ERROR
- Faulty or wrongly inserted CD: Message CD ERROR
- Operation temperature exceeded: Message HIGH TEMP

In these cases the device stays in the currently selected mode.

Nevertheless, the momentary impossible mode can be skipped by pressing the Mode button [8] again.

### Waveband choice

FM bands: tap FM button [5] FM I → FM II → FM AUTO

AM bands: tap AM button [6]: MW → LW → SW

### Station selection by automatic search

Press one of the tuning buttons < or > [1 or 3].

First run – search level 1, [D1] shows "I", second run – search level 2, [D1] shows "II".

Manual choice of selectivity: Search for strong stations: Tap tuning button [1 or 3] once.  
Search for weak stations: Tap tuning button [1 or 3] twice.

### Station selection by manual search

Press button m [2], the "MAN" indicator [D1] is lit. Tap tuning buttons to tune the frequency.

### Reception of a RDS station

Tap button RDS [10] to toggle between RDS on and off. Indicator [D4] shows status.

If a RDS station is received, the display [D3] first shows the frequency and afterwards the program service name.

### Regionalization

Press button RDS [10] for about 2 sec. Display [D3] will briefly indicate status REG ON / REG OFF

### Traffic program

Switch on/off by using TP button [11], [D8] indicates status.

Only stations providing traffic messages are received. The set automatically searches a TP station ("TP" blinking).

The Cassette- or CD-Operation will be interrupted during of a traffic message.

If a traffic program is received, but the TP-function is not activated, the indicator [D8] displays the character "T".

### Station storage manual

Press one of the preset buttons [12 – 17] about 2 sec. until the tuned station is audible again after a short mute.

### Autostore

Keep FM button [5] pressed until display indicates "AUTOSTORE".

The strongest FM stations are stored on the preset buttons [12 – 17] (waveband FM AUTO).

### Recall of a stored station

Select waveband [5 or 6] and tap desired preset button [12 – 17].

### Station scan

Tap SCAN button [7]. The frequency band is scanned upwards with selectivity level I.

If a station with sufficient strength is found, it gets audible for 8 seconds. Afterwards the searching is continued.

During the scan, the display [D3] toggles between the string "SCAN" and the frequency of the station.

The scan function can be aborted by pressing SCAN [7] again or by selection of any other radio function.

## **CASSETTE OPERATION (only C33)**

### **Start cassette operation**

Insert cassette into the compartment [28] **or** if there is already a cassette inside, tap the Mode-Button [8].

### **Stop cassette operation**

Press eject button [29]. The cassette is ejected **or** if the cassette should stay inside, tap the Mode-Button [8].

### **Dolby noise reduction**

With every tap on button [27] the function changes between "Dolby B", "Dolby C", "Off".

### **Track selection**

With every press of button [9], playback toggles between track 1 (NOR) and track 2 (REV).

### **Fast winding**

Tap button "m" [2] and then within 2 sec. tuning button [3] for fast forward winding or [1] for fast reverse winding. Stop winding by pressing button [1 or 3] again or by selection of another function.

### **Music search**

Tap tuning button [1 or 3]. The tape winds to the begin of the next title, then the deck starts playback. Stop search by pressing button [1 or 3] again or by selection of another function.

### **Clean**

After every 20 hours of cassette operation, the message "TAPE CLEAN" is displayed. Clean head and tape guidings with a wet cleaning cassette.

## **CD OPERATION (only CD33)**

### **Start CD operation**

Insert CD into the compartment [28] **or** if there is already a CD inside, tap the Mode-Button [8].

### **Stop CD operation**

Press eject button [29], **or** if the CD should stay inside, press the Mode-Button [8].

If the CD is not removed from the player after eject, it is pulled in again automatically after a few seconds, but without changing to CD mode.

### **Cue and Review playback**

First tap button "m" [2], then within 2 seconds press and hold tuning button [1 or 3] for fast playback.

After releasing the button, or when reaching the begin/end of the disc, the player resumes normal playback.

After 8 sec. the MANUAL function will automatically switch off.

### **Track up**

Tap tuning button [3] to chose next track. If the button is held down, the track number is continuously incremented.

### **Track down**

Tap tuning button [1] once to restart the current track.

Tap twice to chose previous track. If the button is held down, the track number is continuously decremented.

### **Scan search**

Press SCAN button [7]. The tracks of the CD are played back for a few seconds in ascending order.

During the scan, the display [D3] toggles between the string "SCAN" and the number of the current track.

The scan function can be aborted by pressing "SCAN" [7] again or by selection of any other function.

### **Random playback**

Keep button "SCAN" [7] pressed, until "RANDOM" appears. The tracks are played back in random order.

The display [D3] toggles between the string "RANDOM" and the number of the current track.

The random function can be aborted by pressing button [7] again or by selection of any other function.

## **CD CHANGER OPERATION (optional)**

### **Start CD changer operation**

Insert magazine into the CD changer **or** if there is already a magazine inside, tap the Mode-Button [8].

### **Stop CD changer operation**

Press magazine eject button at the CD changer **or** if the magazine should stay inside, press the Mode-Button [8].

### **CD selection**

Press button [12 – 17] to chose the desired CD. If there is no CD in the selected slot, "NO DISC" appears.

### **Cue playback, Track up/down, Scan search and Random playback**

See the corresponding sections of the single CD operation.

## **C33/CD33 CONTROLS**

### **Bass**

Tap or keep pressed button [22] to decrease bass level and button [23] to increase bass level.

In the display, the current setting is indicated by the position of the vertical bar: BASS - \_\_\_\_|\_\_\_\_ +

### **Treble**

Tap or keep pressed button [24] to decrease treble level and button [25] to increase treble level.

In the display, the current setting is indicated by the position of the vertical bar: TREB - \_\_\_\_|\_\_\_\_ +

### **Fader (front/rear)**

Tap or keep pressed button [30] to increase the rear volume and button [31] to increase the front volume.

In the display, the current setting is indicated by the position of the vertical bar: FADR v \_\_\_\_|\_\_\_\_ ^

### **Balance (left/right)**

Tap or keep pressed button [32] to increase the left volume and button [33] to increase the right volume.

In the display, the current setting is indicated by the position of the vertical bar: BAL < \_\_\_\_|\_\_\_\_ >

### **Loudness**

Switch On/Off by tapping button [26].

### **Tone Linear**

To adjust all tone settings to their central position, keep button [26] pressed until "TONE LINEAR" appears.

### **Volume adjustment**

Adjust volume by turnknob [4].

## **CLOCK FUNCTIONS (only available when set is connected to the timer modul of the car or the I-BUS tool)**

### **Request clock display**

Tap button [18] to display the actual time for about 8 seconds (also possible with ignition off).

### **Clock setting**

If power supply was interrupted the clock has to be set initially. This is indicated by a blinking clock display.

Press button "SET" [19], in the display [D6], the segments for the minutes are blinking.

Press or keep pressed one of the clock setting buttons [20, 21] to increment or decrement the minutes.

If the minutes are adjusted correctly, press button "SET" [19] again. The segments for the hours are blinking.

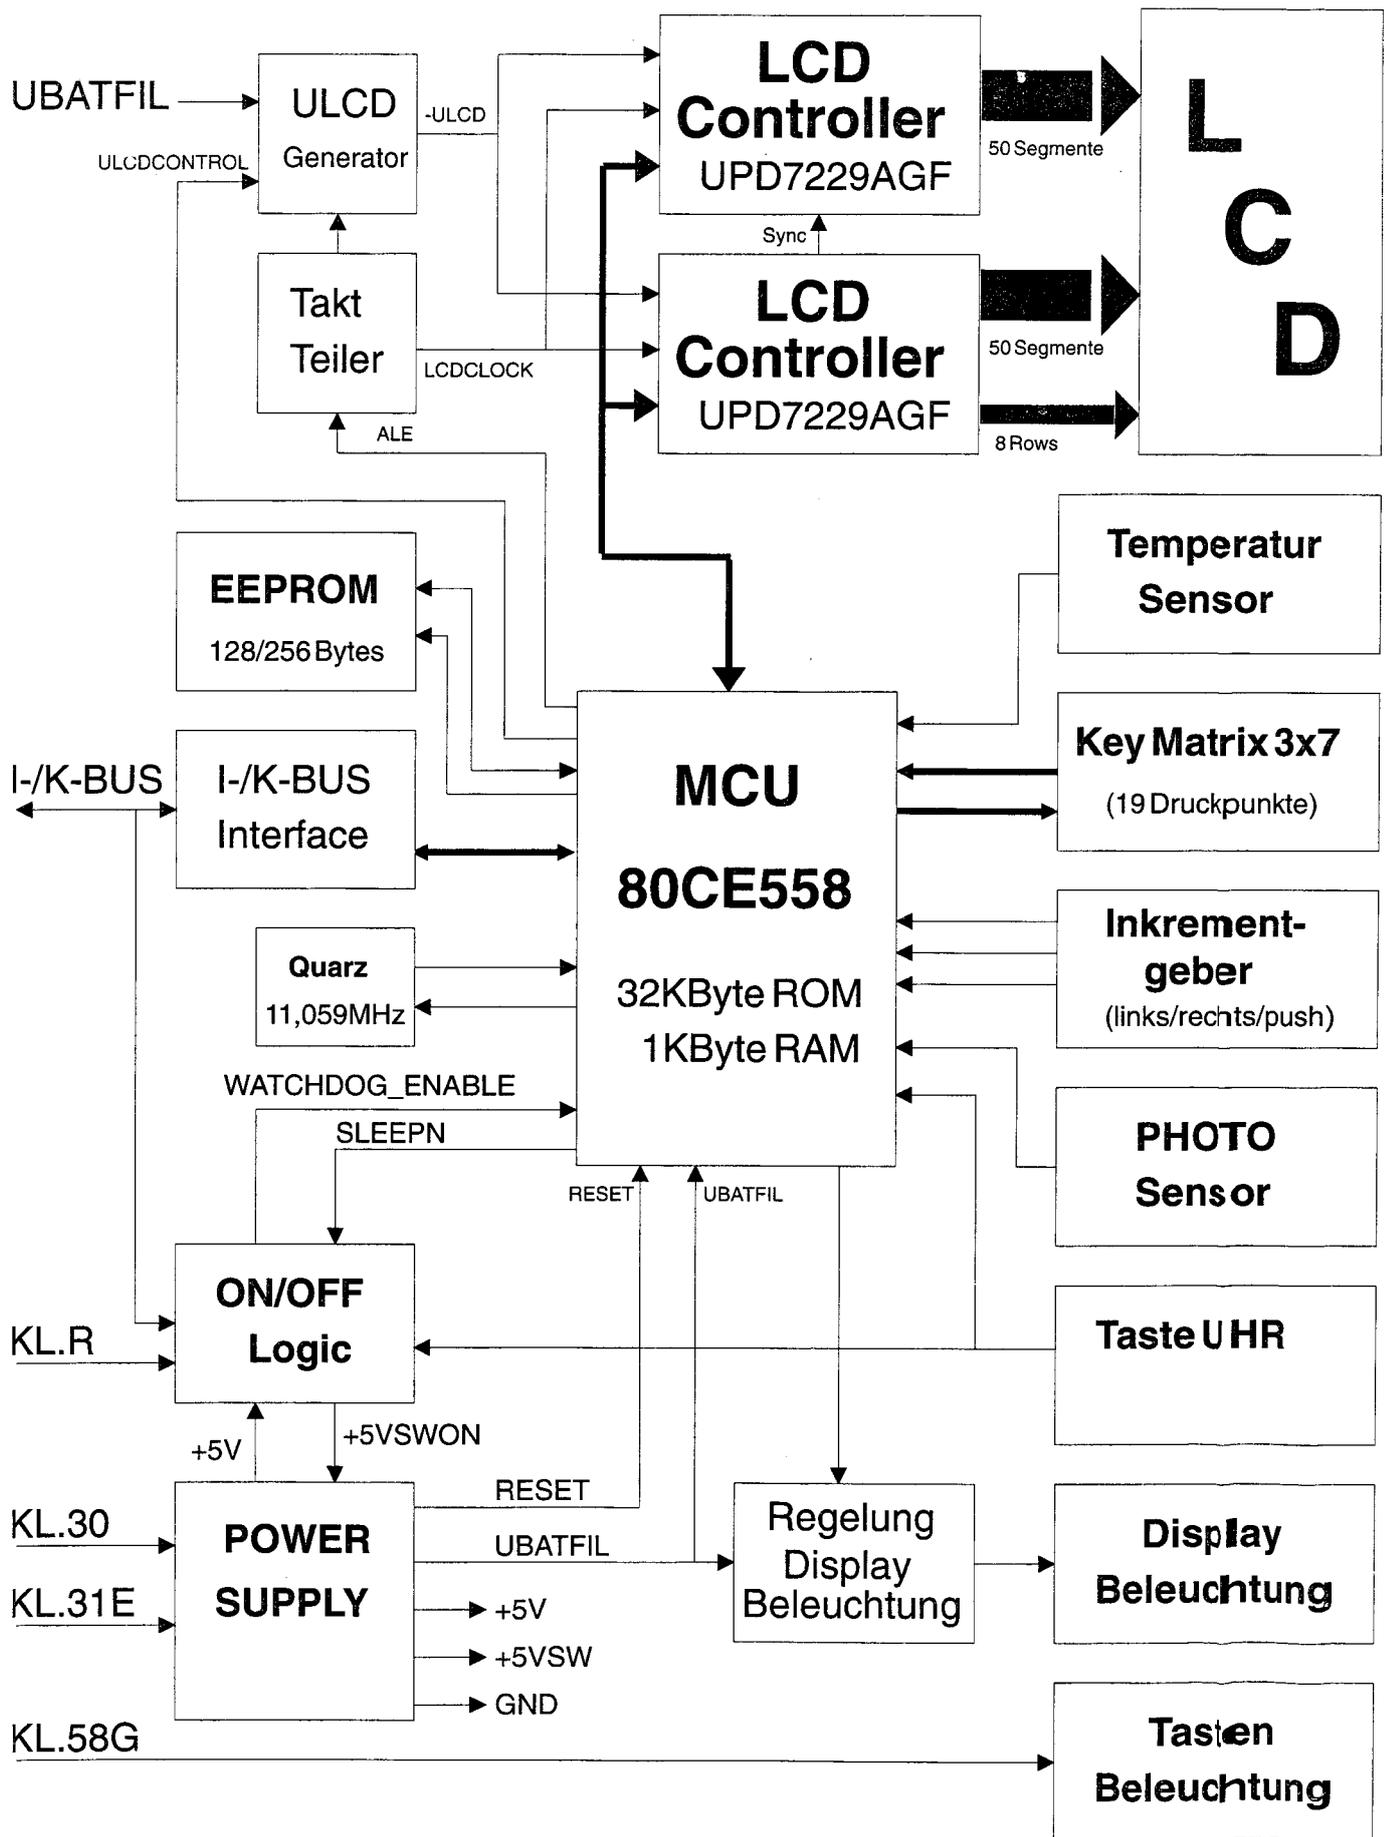

Press or keep pressed one of the clock setting buttons [20, 21] to increment or decrement the hours.

If the hours are adjusted correctly, press button "SET" [19] again to finish the setting.

### **Cancel setting procedure**

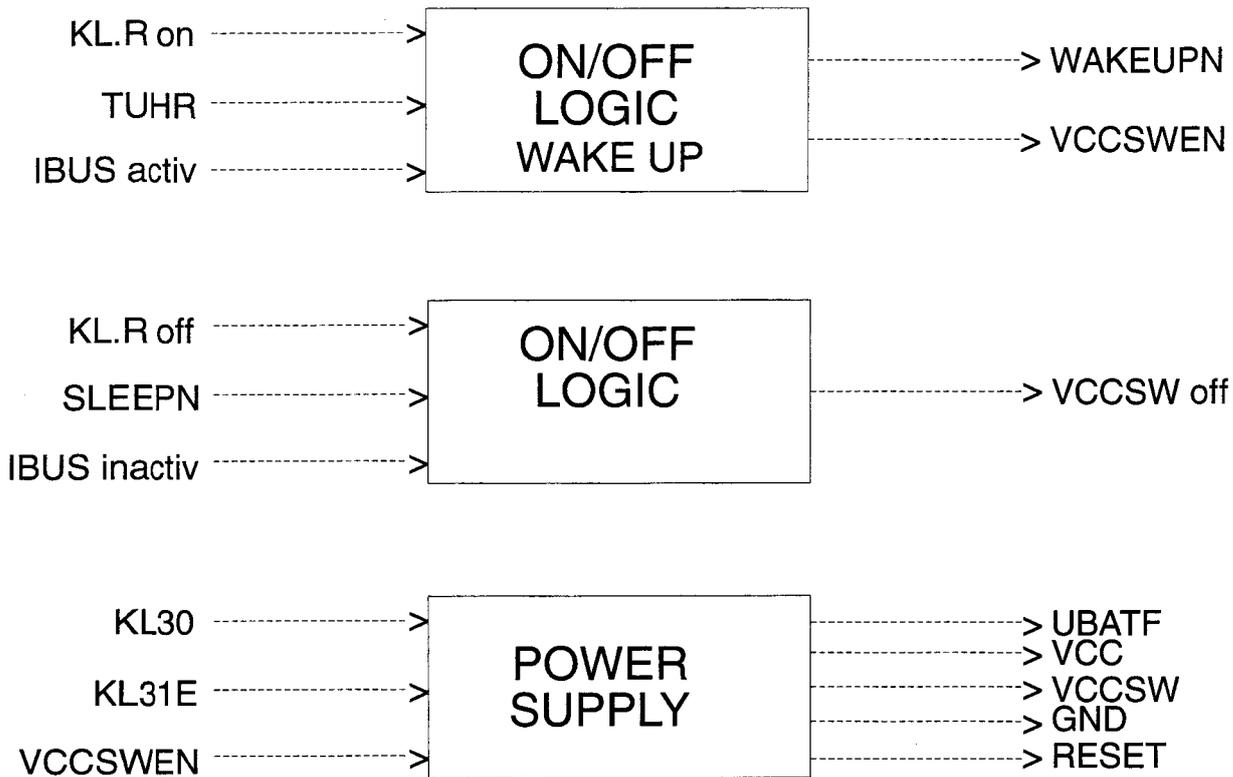

The setting procedure can be cancelled at any time by pressing the clock request button [18]. In this case, all previous manipulations of the clock are disregarded.

# Blockdiagram IRIS

## SUPPLY VOLTAGES AND SIGNALS

### On/off logic and Power supply

KL.R	Ignition key voltage	14,0 V
KL.30	Battery voltage	14,0 V
KL.31E	GND	0,0 V
TUHR	Clock request	0,0 V when clock button pushed 5,0 V when button inactiv
IBUS	Data line (activ high)	High: 14,0 V Low during data communication
WAKEUPN	$\mu$ C start up signal (activ low)	Low: $\leq 0,9$ V (20 ms) High: 5,0 V
VCCSWEN	Breaking voltage for VCCSW	$\leq 0,2$ V
SLEEPN	$\mu$ C standby signal (activ low)	Low: $\leq 0,3$ V High: 3 0,6 V
VCC	Supply voltage	+ 5,0 V (+/-2%), max. 50mA
GND	Ground	0,0 V
VCCSW	switched supply voltage	+ 5,0 V (+2%/-5%)
UBATF	filtered battery voltage for display illumination	> 13,0 V, max. 400mA
RESET	Reset-Signal (activ high)	Low: $\leq 0,8$ V High: 3 3,85 V (10 ms) Reset when VCC < 4,5V

Keypadmatrix

TROW1 - 7	Scan signal Row 1 - Row 7	5,0 V
TCOL1 - 3	Scan signal Column 1 - Column 3	0,0 V 5,0 V if concerned button is pushed

Photosensor signal

PHOTOSEN	Photosensor signal	5,0 V when dark 0,0 V when bright
----------	--------------------	--------------------------------------

Button illumination

KL58G	Extern illumination	14,0 V
-------	---------------------	--------

Temperature sensor

TEMPSEN	Temperature sensor signal	2,5 V (25°C) 3,3 - 0,8 V for temp. range -40 to +80°C
---------	---------------------------	----------------------------------------------------------

Pulse switch

INRIGHT	turn right	0 V / 5 V alternating
INLEFT	turn left	0 V / 5 V alternating
INPUSH	push	5,0 V 0,0 V when pushed

Display illumination

UBATF	filtered battery voltage for display illumination	> 12,0 V, max. 400mA
UDISIL	Return conductor from display illumination	5 - 12 V (brightness dependend)

Controller Interface

-ULCD	Negative LCD-Voltage	-1,8 V (25°C) -2,7 - -1,0 V for temp. range -40 to +80°C
ULCDCHK	Measuring voltage for LCD-Voltagecontrol	1,4 V
LCDRESET	Reset-signal for LCD-Controller (activ high)	High: 5,0 V (20 ms) signal when KL.30 on Low: 0 V
LCDCLK	Clock for LCD-Controller	230,4 KHz
D0 - D3	Databits for LCD-Controller	Digital line
STBN	Standby not-signal for LCD-Controller	Digital line
BUSYN	Busy not-signal for LCD-Controller	Digital line
C/DN	Control/Data not-signal for LCD-Controller	Digital line
CSN	Chip select not-signal for LCD-Controller	Digital line
KLRON	KL_R voltage control	2,9 V
PWMULCD	Pulse width modulated control signal LCD voltage	ca. 200 Hz
PWMDISIL	Pulse width modulated control signal display ill.	0 - 5 V (brightness dependend), ca. 200 Hz
UBATCON	Battery voltage control	2,9 V
IBUSFIL	Filtered I-BUS signal	13 V
ULCDCLK	Clock frequency for generation of -ULCD	57,6 KHz
ALE	Clock generator for LCD controller	1843,2 KHz

Service connections (only used in production for software download)

RXD	RS232 receive signal (TTL-level)
TXD	RS232 send signal (TTL-level)
SCL	I <sup>2</sup> C-Bus clock signal
SDA	I <sup>2</sup> C-Bus data signal
SEN/STA	I-BUS control signal

## TESTMODE

Hold buttons 10 (RDS resp. AS) and 17 (Preset 6) depressed while switching ignition on (14,4 V to clamp R).  
Display will show HXX SXX (XX = Version of hardware resp. software).

Push button 7 (SCAN) within 5 sec. for display test.  
One after the other all segments will be shown.  
After the display test the program returns to HXX SXX.

Push button 8 (MODE resp. TAPE/CD) within 5 sec. for button test.  
Display will show TASTE:—  
— will change to the concerned number when you push the buttons.  
After the button test the program returns to HXX SXX.

Push button 9 (UP/DOWN resp. RANDOM resp. PROG) within 5 sec. for incremental switch test.  
Display will show INKR.:—  
Turn the volume knob to the right: The number will increase to 36.  
Turn the volume knob to the left: The number will decrease to 00.  
After the incremental switch test the program returns to HXX SXX.

To leave the testmode switch set off or wait 5 sec.

## EEPROM

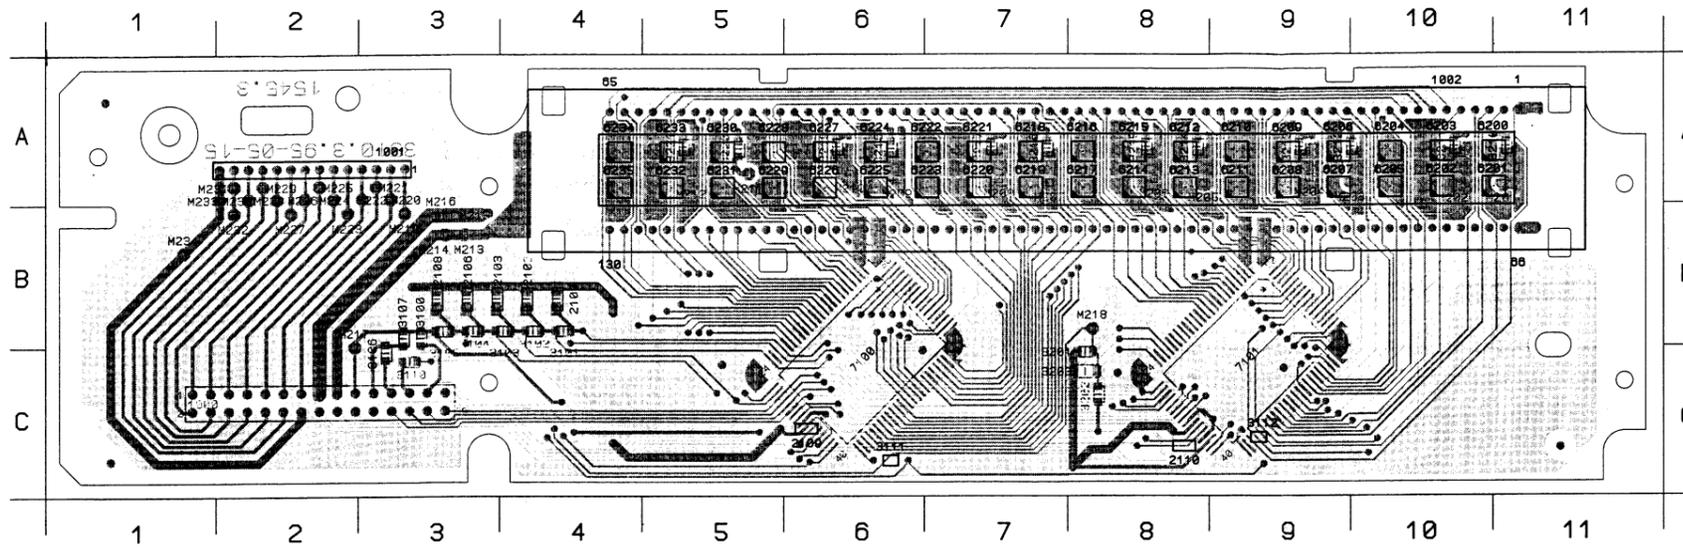

The Eeprom mentioned in the partslist is an empty one.  
This device can only be programmed with special equipment in factory Wetzlar.  
Without a correct programmed Eeprom the IRIS modul does not function according specification.  
(Power down, illumination control, LCD contrast)

**In case of a defect Eeprom send the set back to:**

Philips Apparatefabrik Wetzlar  
Department SP-CS  
Philipsstrasse 1  
D-35576 Wetzlar

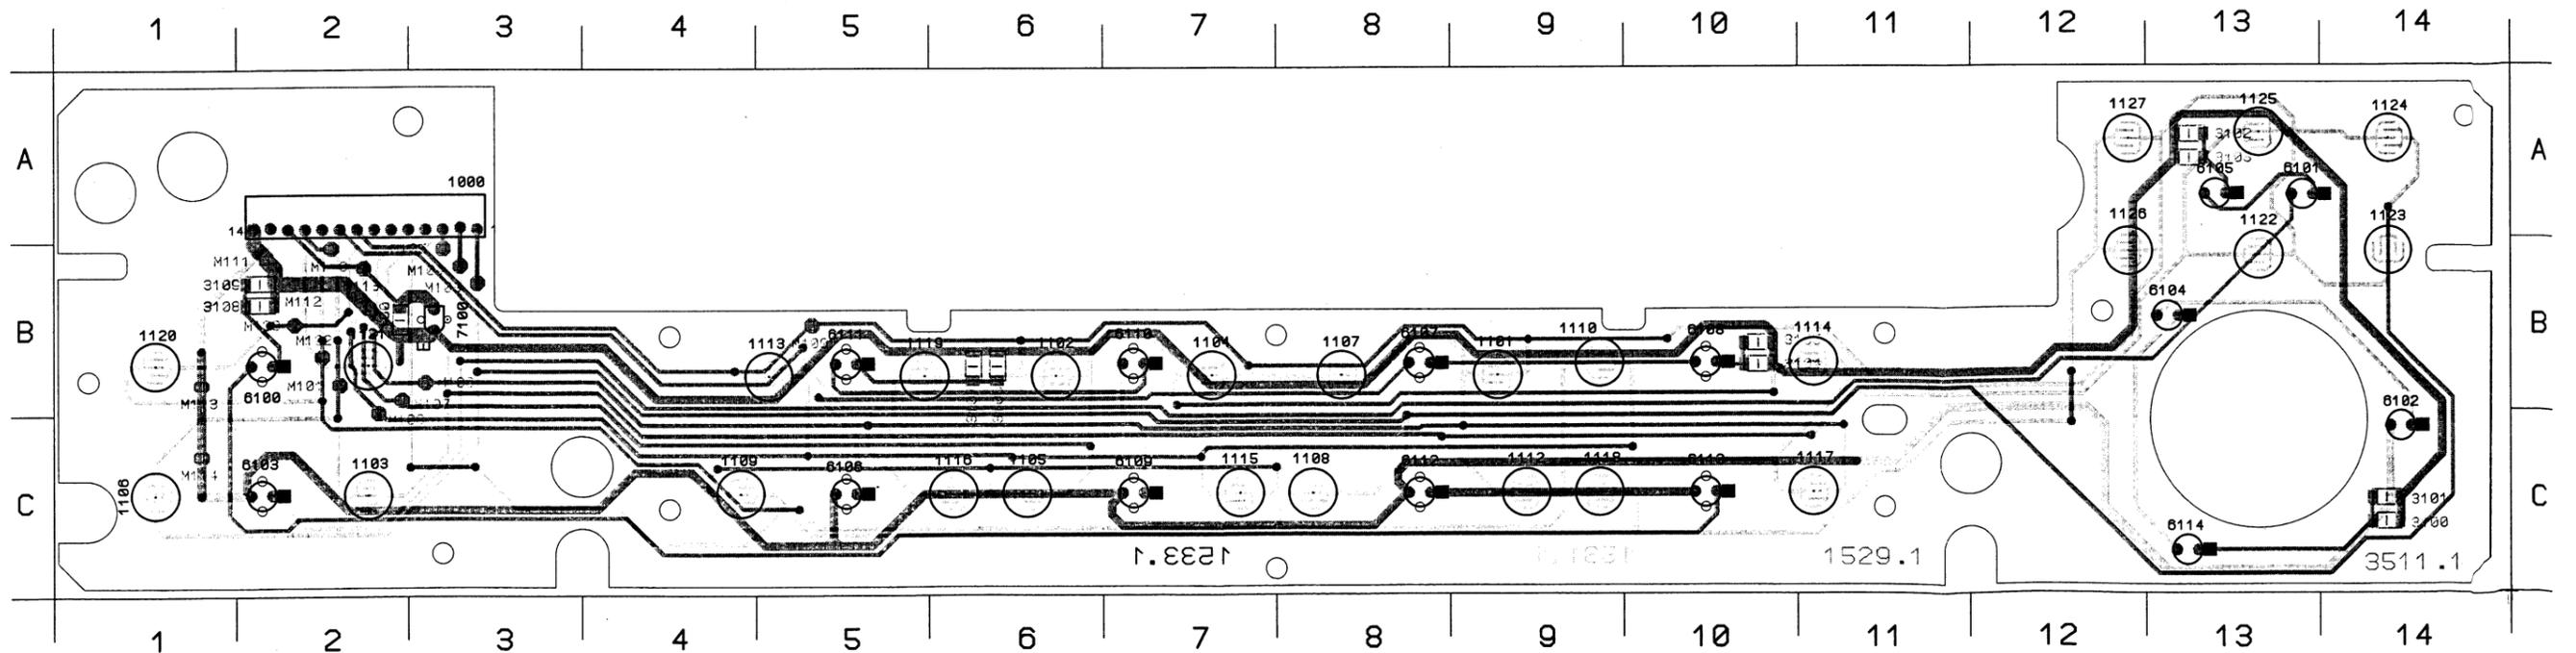

Germany
