

DENON

Hi-Fi Personal Component System

SERVICE MANUAL

PERSONAL COMPONENT SYSTEM

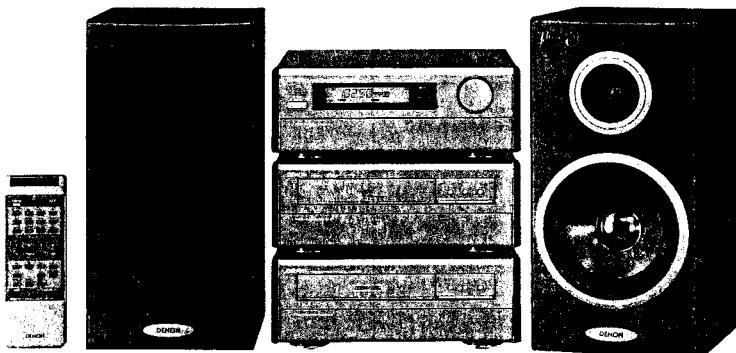

UNIT No. UDRA-70 (MW LW FM Stereo Receiver)

UNIT No. UDR-70 (Cassette Tape Deck)

UNIT No. UCD-70 (Compact Disc Player)

EUROPE & U.K. models

D70 Aho

The D-70 Personal Component System consists of the following:

Receiver Section	UDRA-70
Remote Control Unit	RC-142
Cassette Deck Section	UDR-70
CD Section	UCD-70
Speaker Section	USC-70

MAIN FEATURES

- **30 FM/AM station random preset tuner**
 - * Random presetting makes for easy operation and will come in handy when the FM stations increases in the future.
- **Power amplifier designed for quality sound**
 - * 30W + 30W high quality power amplifier.
- **SDB control**
 - * Super dynamic bass control for clear low bass sound.
- **Super linear converter and high performance digital filter**
 - * DENON's unique systems for preventing loss of CD sound quality create an excellent sound field.

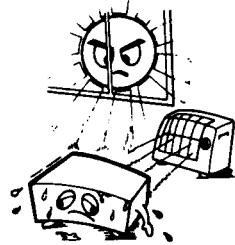

- **Editing circuit included**
 - * When performing edited recording onto tapes, tracks can be selected automatically so that the blank space on the tape is minimum.
- **Dolby B, C N.R**
 - * For playback and recording with high quality sound.
- **CD SRS circuit**
 - * CDs can be recorded at the touch of a button.
- **Easy-to-use remote control unit**

Check that the following parts are included in the package aside from the main unit:

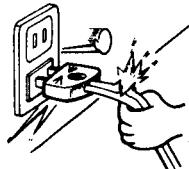

① Operating Instructions	1
② FM Antenna	1
③ AM Loop Antenna	1
④ Remote Control Unit	1
⑤ R6P/AA batteries	2
⑥ System Connector	2
⑦ FM Antenna adapter	1

NIPPON COLUMBIA CO., LTD.

**NOTE ON USE/HINWEISE ZUM GEBRAUCH/OBSERVATIONS RELATIVES A L'UTILISATION
NOTE SULL'USO/NOTAS SOBRE EL USO/ALVORENS TE GEBRUIKEN/OBSERVERA**

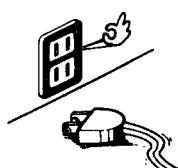

- Avoid high temperatures
Allow for sufficient heat dispersion when installed on a rack.
- Vermeiden Sie hohe Temperaturen
Beachten Sie, daß einezureichende Luftzirkulation gewährleistet wird, wenn das Gerät auf ein Regal gestellt wird.
- Eviter des températures élevées
Tenir compte d'une dispersion de chaleur suffisante lors de l'installation sur une étagère.
- Evitate di esporre l'unità a temperature alte.
Assicuratevi che ci sia un'adeguata dispersione del calore quando installate l'unità in un mobile per componenti audio.
- Evite altas temperaturas
Permita la suficiente dispersión del calor cuando está instalado en la consola.
- Vermijd hoge temperaturen.
Zorg voor een degelijk hitteafvoer indien het apparaat op een rek wordt geplaatst.
- Undvik höga temperaturer.
Se till att det finns möjlighet till god värmeavledning vid montering i ett rack.

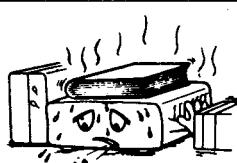

- Handle the power cord carefully.
Hold the plug when unplugging the cord.
- Gehen Sie vorsichtig mit dem Netzkabel um.
Halten Sie das Kabel am Stecker, wenn Sie den Stecker herausziehen.
- Manipuler le cordon d'alimentation avec précaution.
Tenir la prise lors du débranchement du cordon.
- Manneggiate il filo di alimentazione con cura.
Agite per la spina quando scollegate il cavo dalla presa.
- Maneje el cordón de energía con cuidado.
Sostenga el enchufe cuando desconecte el cordón de energía.
- Haarreter het netsnoer voorzichtig.
Houd het snoer bij de stekker vast wanneer deze moet worden aan- of losgekoppeld.
- Hantera nätkablen varsamt.
Håll i kabeln när den kopplas från eluttaget.

- Keep the set free from moisture, water, and dust.
- Halten Sie das Gerät von Feuchtigkeit, Wasser und Staub fern.
- Protéger l'appareil contre l'humidité, l'eau et la poussière.
- Tenete l'unità lontana dall'umidità, dall'acqua e dalla polvere.
- Mantenga el equipo libre de humedad, agua y polvo.
- Laat geen vochtigheid, water of stof in het apparaat binnendringen.
- Utsätt inte apparaten för fukt, vatten och damm.

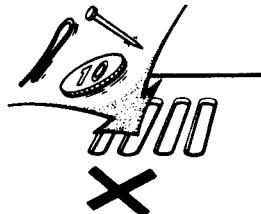

- Unplug the power cord when not using the set for long periods of time.
- Wenn das Gerät eine längere Zeit nicht verwendet werden soll, trennen Sie das Netzkabel vom Netzstecker.
- Débranchez le cordon d'alimentation lorsque l'appareil n'est pas utilisé pendant de longues périodes.
- Disinnestate il filo di alimentazione quando avete l'intenzione di non usare il filo di alimentazione per un lungo periodo di tempo.
- Desconecte el cordón de energía cuando no utilice el equipo por mucho tiempo.
- Neem altijd het netsnoer uit het stopcontact wanneer het apparaat gedurende een lange periode niet wordt gebruikt.
- Koppla ur nätkablen om apparaten inte kommer att användas i lång tid.

*(For sets with ventilation holes)

- Do not obstruct the ventilation holes.
- Die Belüftungsöffnungen dürfen nicht verdeckt werden.
- Ne pas obstruer les trous d'aération.
- Non coprite i fori di ventilazione.
- No obstruya los orificios de ventilación.
- De ventilatieopeningen mogen niet worden beblokkeerd.
- Täpp inte till ventilationsöppningarna.

- Do not let foreign objects in the set.
- Keine fremden Gegenstände in das Gerät kommen lassen.
- Ne pas laisser des objets étrangers dans l'appareil.
- E' importante che nessun oggetto è inserito all'interno dell'unità.
- No deje objetos extraños dentro del equipo.
- Laat geen vreemde voorwerpen in dit apparaat vallen.
- Se till att främmande föremål inte tränger in i apparaten.

- Do not let insecticides, benzene, and thinner come in contact with the set.
- Lassen Sie das Gerät nicht mit Insektiziden, Benzin oder Verdünnungsmitteln in Berührung kommen.
- Ne pas mettre en contact des insecticides, du benzène et un diluant avec l'appareil.
- Assicuratevi che l'unità non venga in contatto con insetticidi, benzolo o solventi.
- No permita el contacto de insecticidas, gasolina y diluyentes con el equipo.
- Laat geen insectenverdelgende middelen, benzine of verfverdunner met dit apparaat in kontakt komen.
- Se till att inte insektsmedel på sprayburk, bensen och thinner kommer i kontakt med apparatens hölje.

- Never disassemble or modify the set in any way.
- Versuchen Sie niemals das Gerät auseinander zu nehmen oder auf jegliche Art zu verändern.
- Ne jamais démonter ou modifier l'appareil d'une manière ou d'une autre.
- Non smontate mai, né modificate l'unità in nessun modo.
- Nunca desarme o modifique el equipo de ninguna manera.
- Nooit dit apparaat demonteren of op andere wijze modifiëren.
- Ta inte isär apparaten och försök inte bygga om den.

IMPORTANT
(BRITISH MODEL ONLY)

The wires in this mains lead are coloured in accordance with the following code:

Blue:	Neutral
Brown:	Live

The colours of the wires in the mains lead of this apparatus may not correspond with the coloured markings identifying the terminals in your plug proceed as follows.

The wire which is coloured blue must be connected to the terminal which is marked with the letter N or coloured black.

The wire which is coloured brown must be connected to the terminal which is marked with the letter L or coloured red.

SAFETY IMPORTANT

WARNING:

TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

LASER PRODUCT"

GENERAL SECTION

MAIN SPECIFICATIONS

● Receiver Section (UDRA-70)

Amplifier

Practical maximum output: 30W + 30W (40 Hz ~ 20 kHz)

Bass adjustment: 100 Hz ±8 dB

Treble adjustment: 10 kHz ±8 dB

SDB (Super Dynamic Bass): 80 Hz, +8 dB

Included jacks: PHONO (MM Cartridge) Input jacks (input sensitivity 2.5m/V/47 kohms)
DAT/VCR: Input jacks output jacks for recording
(input sensitivity 150mV/75 kohms)
Headphones jack: 3.5 mm mini-size jack

● Tuner

Reception frequency range: FM: 87.50 MHz ~ 108.00 MHz

MW: 522 kHz ~ 1611 kHz

LW: 153 kHz ~ 279 kHz

Reception sensitivity: FM: 1.5 µV, 75 ohms (SN ratio 30 dB)

MW: 20 µV (SN ratio 20 dB)

LW: 35 µV (SN ratio 20 dB)

FM stereo separation: 35 dB (1 kHz)

Max. external dimensions: 250 (W) × 96 (H) × 354 (D) mm (9-27/32" × 3-25/32" × 13-15/16")

Weight: 5.3kg (11 lbs 11 oz)

Power supply: AC 220V, 50 Hz (for Europe model)

AC 240V, 50 Hz (for U.K. model)

Power consumption: 100W

● CD Player Section (UDCM-70)

Wow & flutter: Below measurable limits (±0.001% W.Peak)

Playing time: 60 minutes/one side

Sampling frequency: 44.1 kHz

Light source: Semiconductor

Max. external dimensions: 250 (W) × 96 (H) × 312 (D) mm (9-27/32" × 3-26/32" × 12-9/32")

Weight: 2.8kg (6 lbs 3 oz)

● Cassette Deck Section (UDR-70)

Type: Horizontal 4-track, 2-channel auto reverse stereo cassette deck

Heads: 1 hard permalloy head for recording and playback, 1 double-gap ferrite head for erasing

Tape speed: 4.75 cm/s

Included circuits: Dolby B and C

Wow & flutter: 0.06% or less (W.R.M.S.)

Usable tapes: Normal, chrome and metal tapes

Max. external dimensions: 250 (W) × 96 (H) × 312 (D) mm (9-27/32" × 3-25/32" × 12-9/32")

Weight: 3.2 kg (7 lbs 1 oz)

● Remote Control Unit (RC-142)

Type: Infrared pulse

Number of buttons: 38

Max. external dimensions: 65 (W) × 175 (H) × 20 (D) mm (2-9/16" × 6-57/64" × 25/32")

Weight: 130 g (approx. 5 oz) (including batteries)

* Maximum dimensions include controls, jacks, and covers. (W) = width, (H) = height, (D) = depth

● For improvement purposes, specifications and functions are subject to change without advanced notice.

Only discs with the mark at the right can be played on this system.

GENERAL SECTION

CONNECTIONS

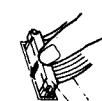

Only connect the AUDIO jacks when connecting a DAT.

When disconnecting the system connector cord, press on the center of the connector plug until you hear a click.

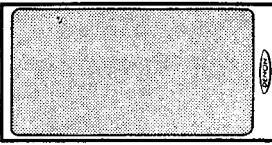

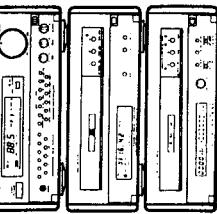

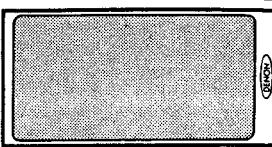

Connecting the System Connector Cord

When connecting the system connector cord, press on the center of the connector plug towards the middle and pull.

NOTE
This system includes digital circuitry, so it may cause problems with the colors on a TV. If so, turn the system's power switch off.

The sets can also be placed next to one another.
(Set the receiver on the very top.)

- Do not plug the power cord into the power outlet until all connections are completed. Connect properly as shown in the diagram.
- Check the right and left channels, and be sure to connect the speaker's L terminals to the amplifier's L terminals, the speaker's R terminals to the amplifier's R terminals.
- Be sure to insert the plugs securely. Incomplete connections can cause noise.
- Note that grouping connection cords (pin-piling cords) together with power cords or setting them near power transformers can cause noise.
- Note that if the input jacks selected with the FUNCTION selectors are open (if nothing is connected), the sound may leak to another component connected to different input jacks.

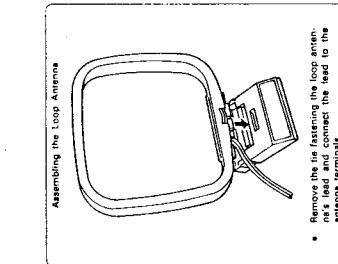

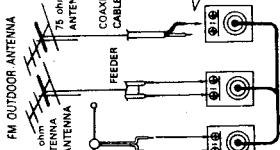

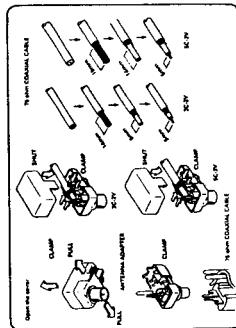

GENERAL SECTION

REMOTE CONTROL UNIT

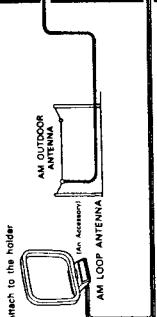

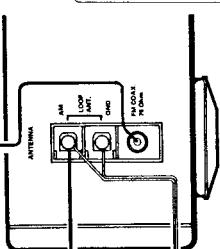

⑥ ANTENNA CONNECTIONS

Connecting the Included Antennas

Connecting the Included Antennas

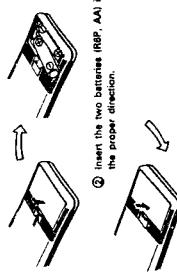

- Remove the tie fastening the loop antenna's lead and connect the lead to the antenna terminals.

Inserting the Batteries

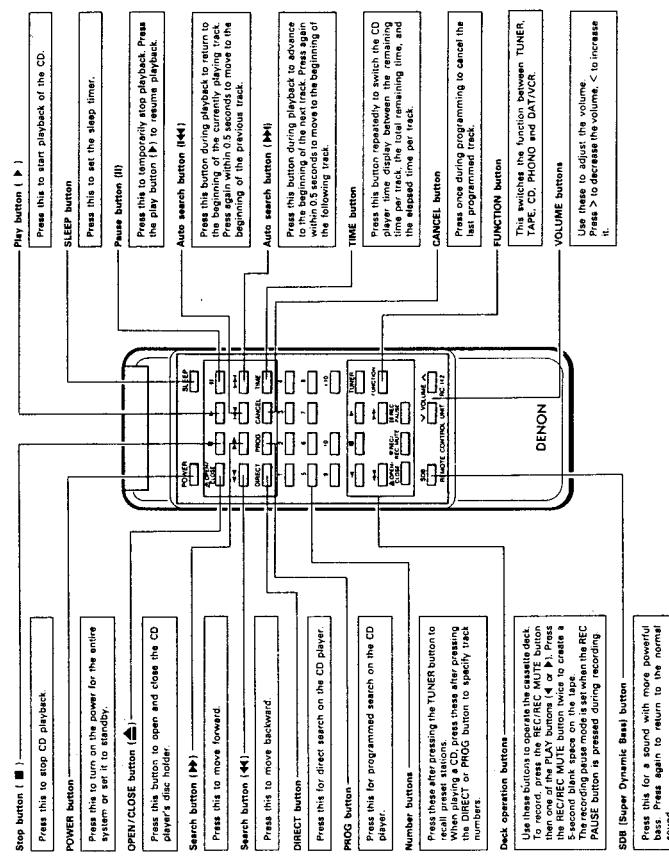

- ① Open the battery case lid on the back of the remote control unit.

- ① Set the battery case lid back in place.

- When adjusting the volume from the remote control unit, the volume will stop changing if the remote control transmitter is moved away from the remote control sensor. Press the button again to continue changing the volume.

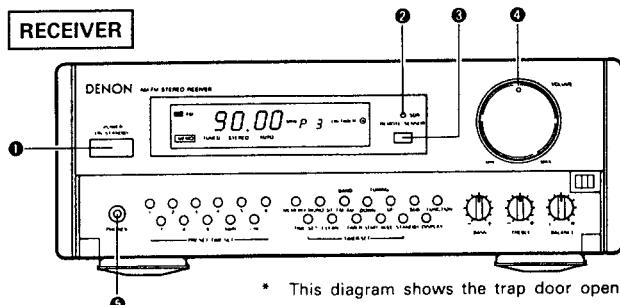

Button Names and Functions

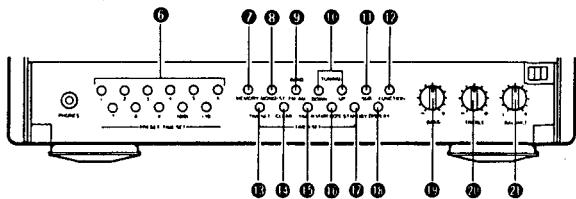

RECEIVER SECTION

PART NAMES AND FUNCTIONS

RECEIVER

* This diagram shows the trap door open.

① POWER switch

Press this switch once to turn on the power and the display. The displays on the CD player and cassette deck also light. The CD player's play indicator does not light. The cassette deck's direction of play indicator lights.

② SDB (Super Dynamic Bass) indicator

This lights when the SDB function is turned on with the SDB button.

③ REMOTE SENSOR

④ VOLUME control

Use this control to adjust the volume. Turn clockwise (↑) to increase the volume, counterclockwise (↓) to decrease it.

⑤ PHONES jack

When using headphones, plug them in here. The sound from the speakers is cut when headphones are plugged in.

⑥ Number buttons for FM/AM presetting, time setting, etc.

These are used to preset and recall AM and FM broadcasts, to set the time and timer, etc.

⑦ MEMORY button

This button is used when presetting AM and FM stations.

⑧ MONO/ST. (FM stereo mute/mono) selector button
(For FM reception)

STEREO mute: Use this mode to receive FM broadcasts in stereo. ("AUTO" appears on the display.) The muting circuit is activated to cut noise between stations.

MONO: In this mode, FM broadcasts are received in monaural, regardless of whether they are broadcast in monaural or stereo.

Set to the mono mode if there is much noise in the stereo mute mode (with "AUTO" displayed) or if the signals are weak.

This button will not function when receiving MW and LW broadcasts.

⑨ BAND (FM/MW/LW) selector button

The band switches between FM and MW, LW each time this button is pressed.

⑩ AUTO TUNING UP and DOWN buttons

These are used to tune in MW, LW and FM stations, and for corrections when setting the time and timer.

⑪ SDB (Super Dynamic Bass) button

Press this button for more powerful bass sound.

Press again to turn the SDB function off.

⑫ FUNCTION selectors

Use these to select the program source.

⑬ TIME SET button

This is used when setting the timer and the current time, and when checking the timer settings, etc.

⑭ CLEAR button

This is used to change the current time and the timer settings.

⑮ TIMER button

This is used to set the timer.

⑯ Timer START MODE button

Use this button to select the function when setting the timer.

⑰ Timer STANDBY button

Press this button so that the timer will operate at the set times.

⑱ DISPLAY TIME/FUNCTION button

Press this button to switch the display between the function and the time.

⑲ BASS control

Use this to adjust the bass.

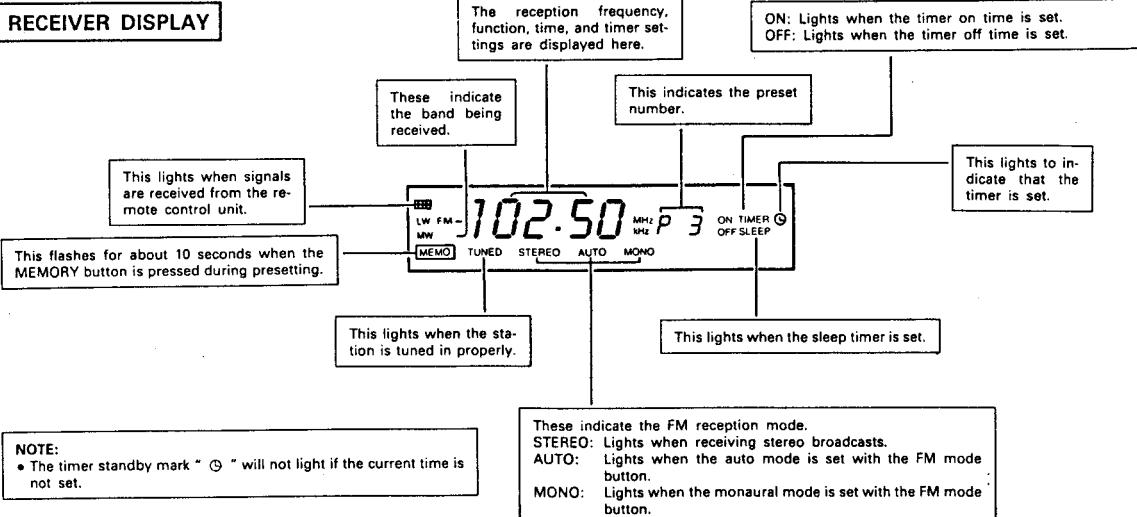

⑳ TREBLE control

Use this to adjust the treble.

㉑ BALANCE control

Use this to adjust the balance between the volume of the left and right channels. The volume is the same for the left and right channels when the control is at the center.

RECEIVER DISPLAY

NOTE:

- The timer standby mark "◎" will not light if the current time is not set.

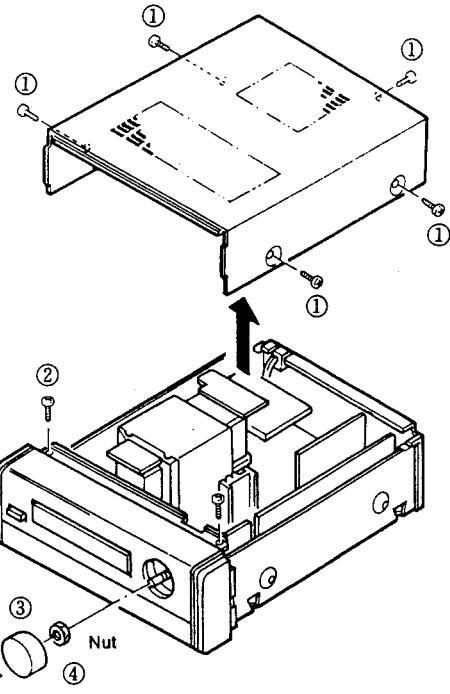

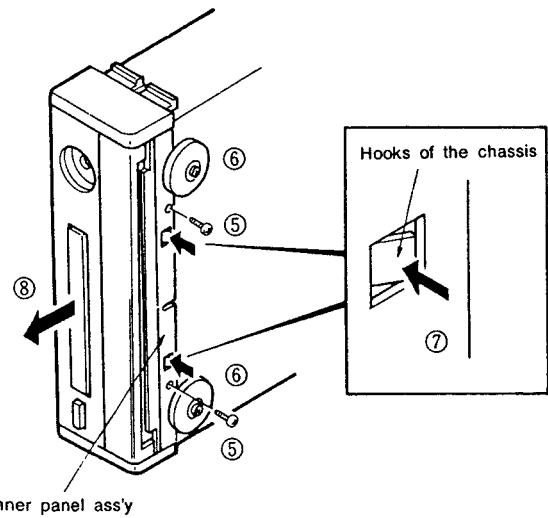

RECEIVER SECTION

REMOVAL OF EACH SECTION

(Follow this procedure in the reverse order when assembling.)

1. Removal of the top cover and the front panel assembly

- ① Remove the 5 screws which fasten the top cover.
- ② Remove the 2 screws which fasten the front panel.
- ③ Remove the volume control assembly in the direction of the arrow.
- ④ Remove the nut which fastens the volume knob. At this time, remove with care the connector which connects the amp unit assembly and the front panel side assembly.

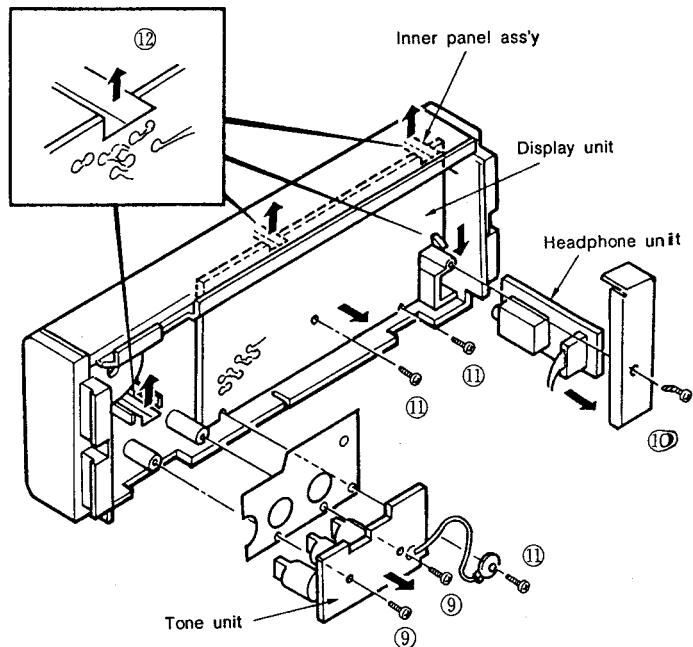

- ⑤ Stand the main unit as illustrated in the diagram and remove the 2 screws which fasten the inner panel assembly.
- ⑥ Slightly loosen the screws of the 2 front legs.
- ⑦ Remove the hooks of the chassis from the inner panel assembly.
- ⑧ Remove the front panel assembly in the direction of the arrow.

2. Removal of the printed wiring board assembly

DISPLAY UNIT ASSEMBLY (1U-2277-2)

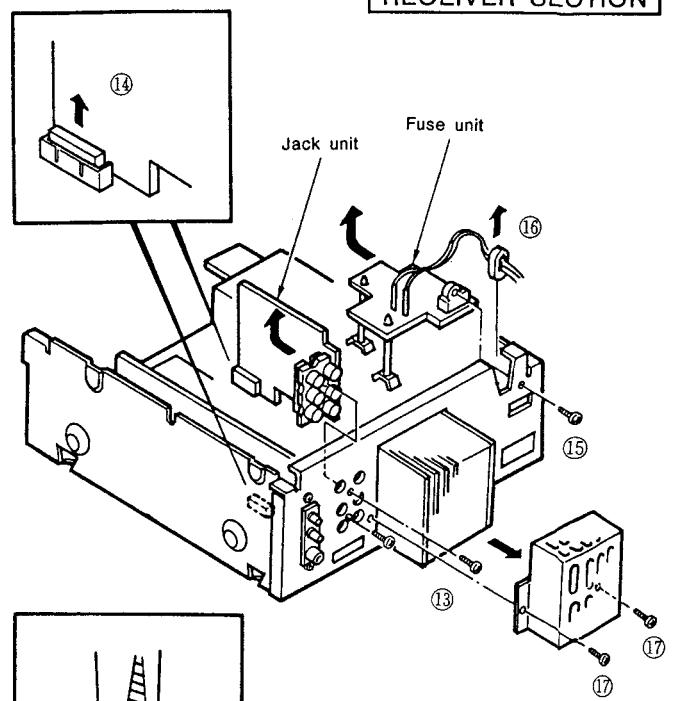

- ⑨ Remove the 2 screws which fasten the tone board.
- ⑩ Remove the screw which fastens the headphone board.
- ⑪ Remove the 3 screws which fasten the display unit assembly.
- ⑫ Remove the hooks of the inner panel assembly from the display unit assembly.

RECEIVER SECTION

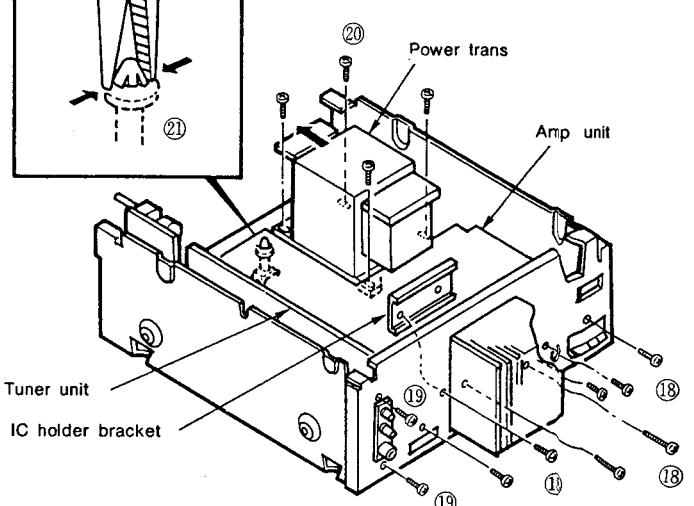

JACK UNIT ASSEMBLY (1U-2278-2) and FUSE UNIT ASSEMBLY
(not on the parts list)

- ⑬ Remove the 2 screws which fasten the jack unit assembly.
- ⑭ Remove the connector which connects the jack unit assembly and the amp unit assembly. (Press the main unit assembly down slightly.)
- ⑮ Remove the screw which holds the fuse unit assembly.
- ⑯ Remove the cord bush from the rear panel and remove the fuse unit assembly in the direction of the arrow.
- ⑰ Remove the 2 screws which fasten the radiator cover.

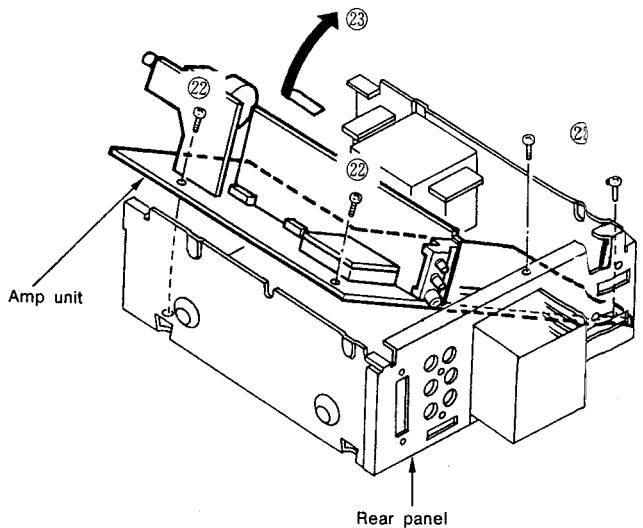

AMP UNIT ASSEMBLY (1U-2277-1)

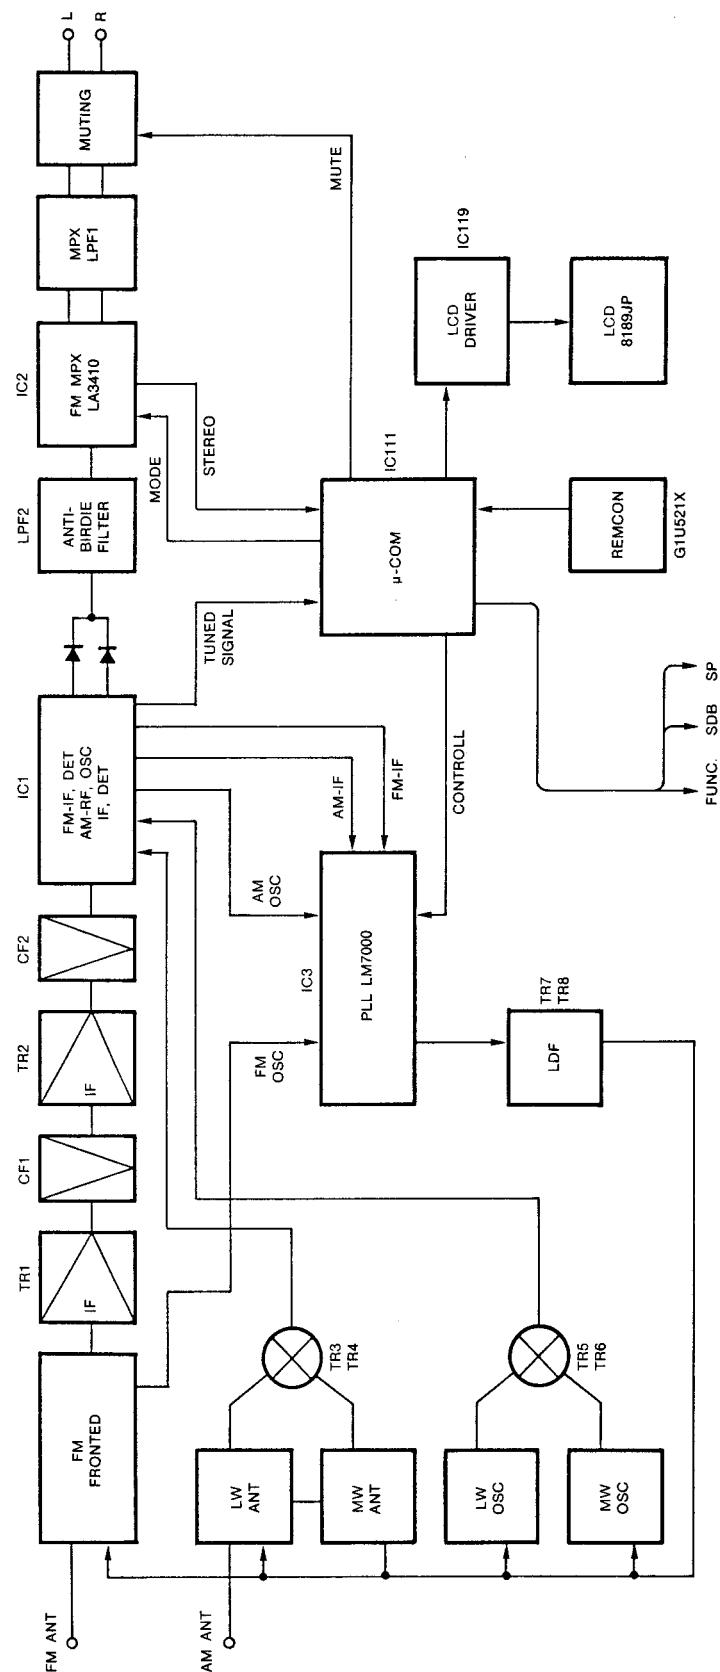

- ⑯ Remove the 5 screws which fasten the amp unit assembly.
- ⑰ Remove the 2 screws which fasten the tuner unit assembly.
- ⑱ Remove the 4 screws which fasten the power transformer. Slide the power transformer in the direction of the arrow at this time.
- ㉑ Use radio pliers or another suitable tool to remove the PCB holder which fastens the amp unit assembly.

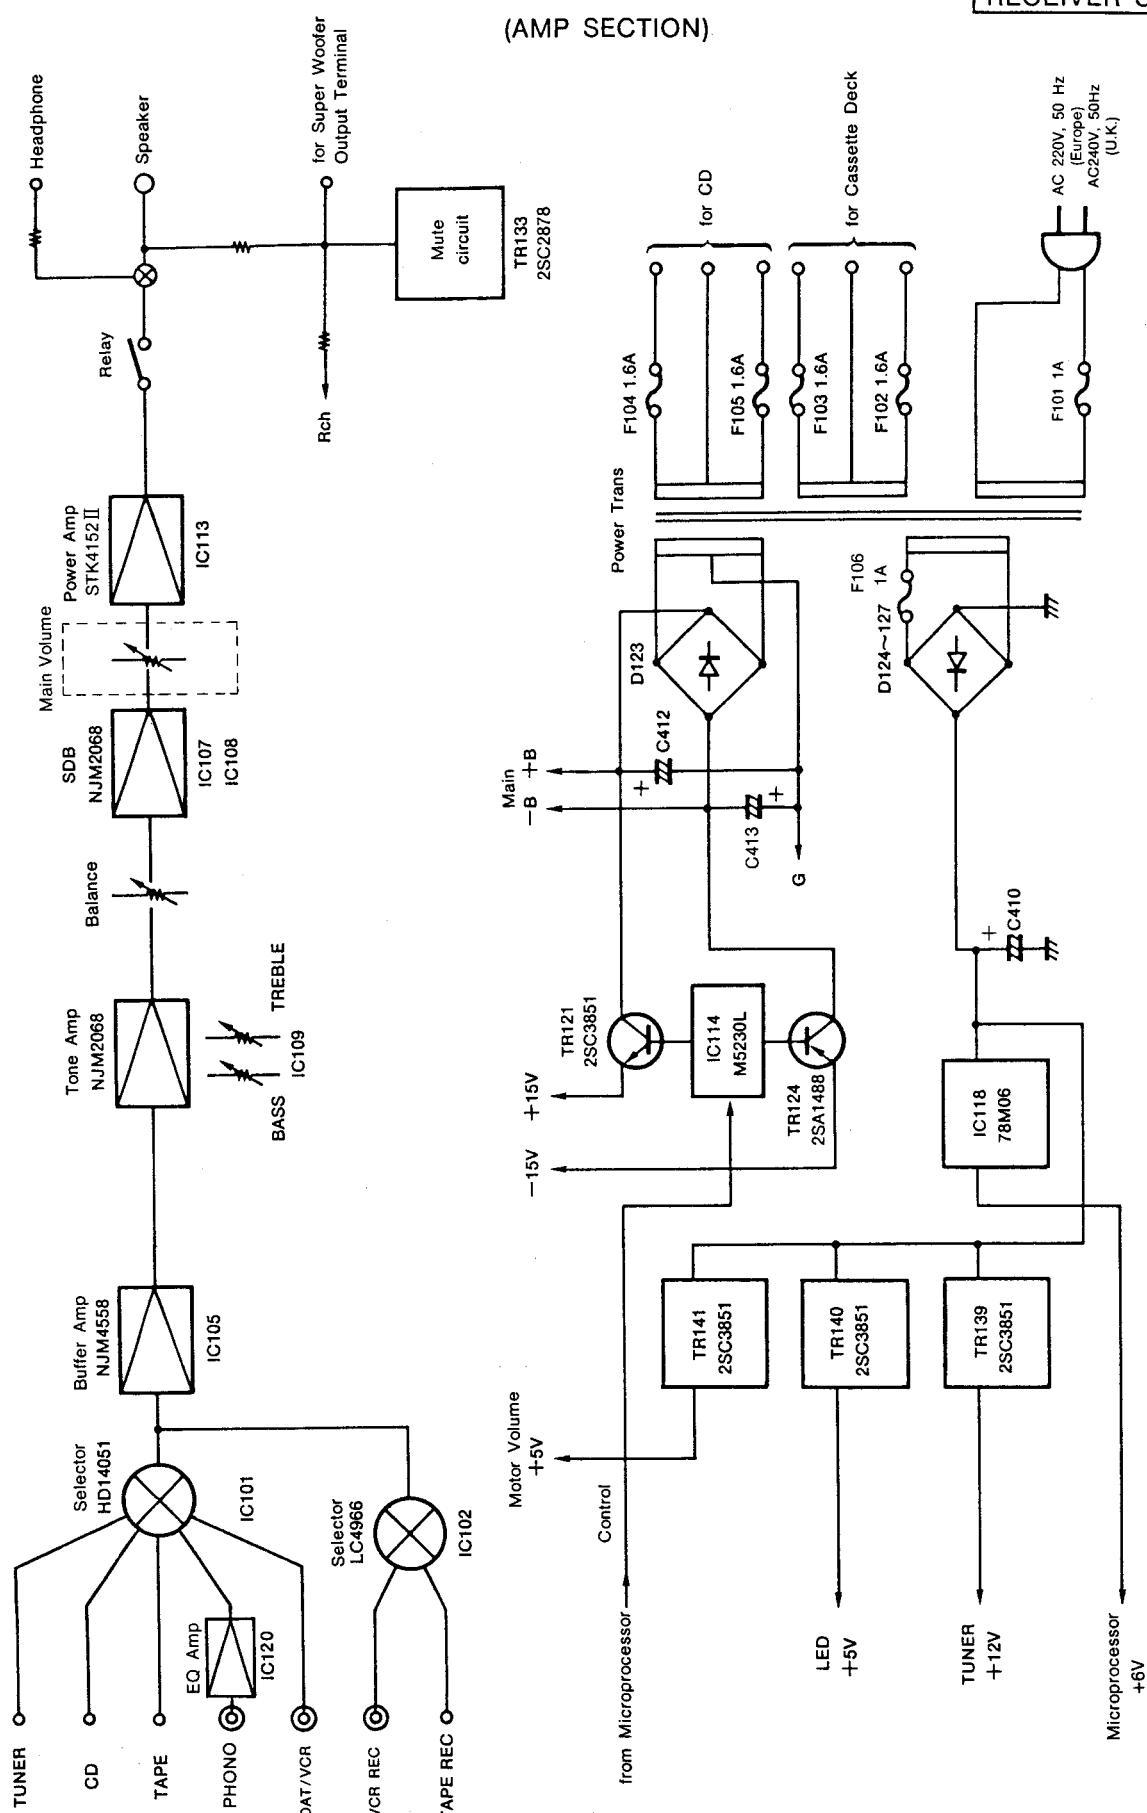

- ㉒ Remove the 4 screws which fasten the amp unit assembly.
- ㉓ Remove the amp unit assembly from the rear panel, then remove the amp unit assembly in the direction of the arrow.

● IC's

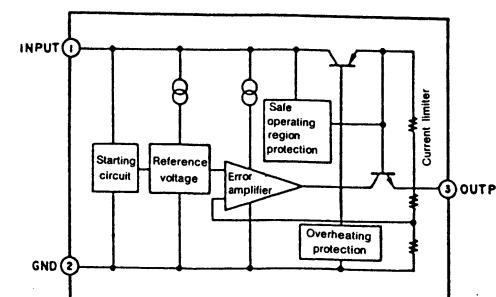

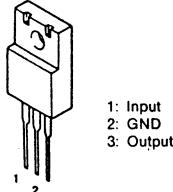

Pin Description

- SYC : Clock (400 kHz) for the controller
- XIN, XOUT : Xtal oscillator (7.2 MHz) with built-in feedback resistor
- FM IN, AM IN : Local oscillator signal input
- CE, CL, DATA : Data input
- B01, B02, B03 : Band data output. B01 can be set as the time base output (8 Hz).
- STRQ : IF counter request input
- STOUT : Auto research stop signal output
- VDD1, VDD2, VSS : Power supply (VDD2 is a back-up power supply)
- AMIF, FMIF : IF signal input
- PDI, PD2 : Charge pump output

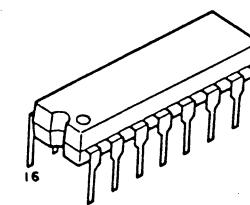

NJM78M06FA (IC118)

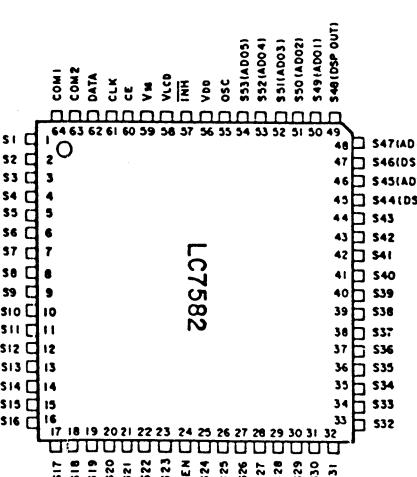

SEMICONDUCTORS

LA3410 (IC002)

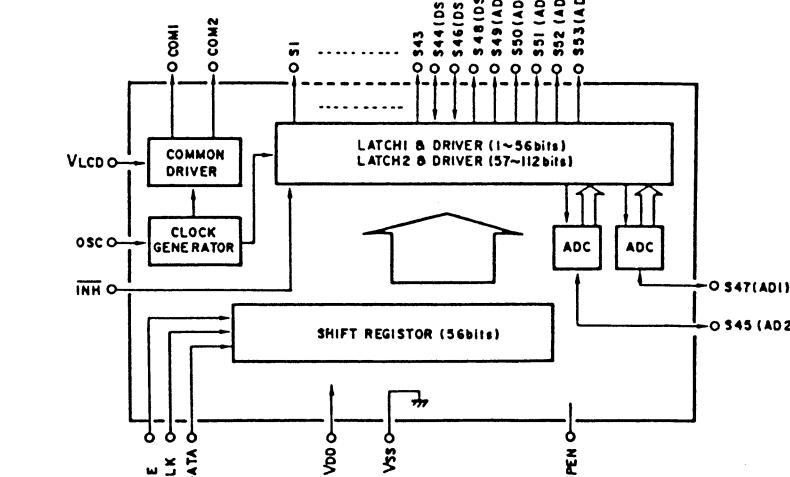

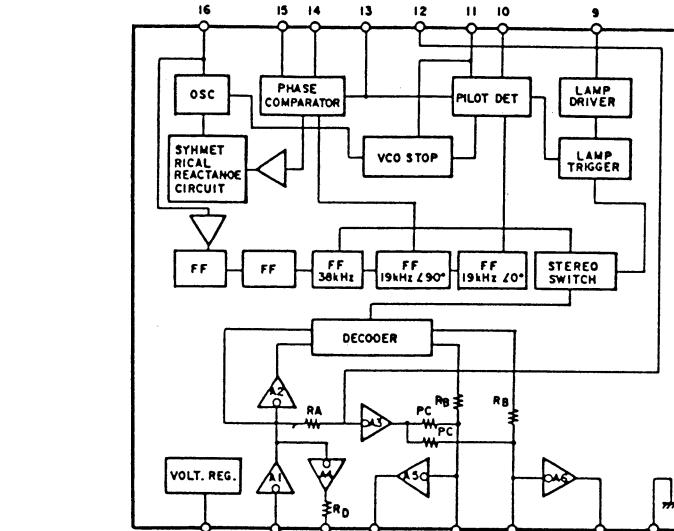

LC7582 (IC119)

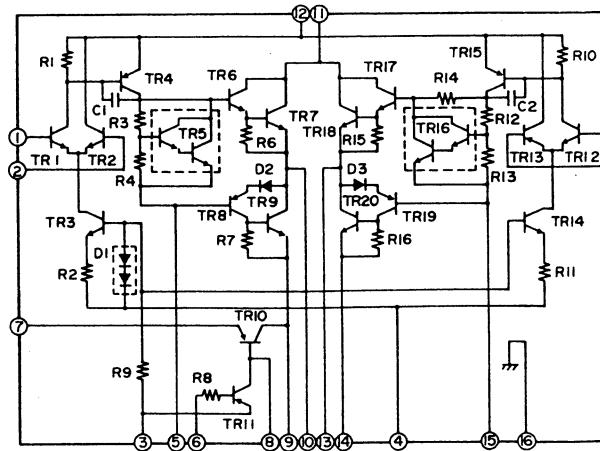

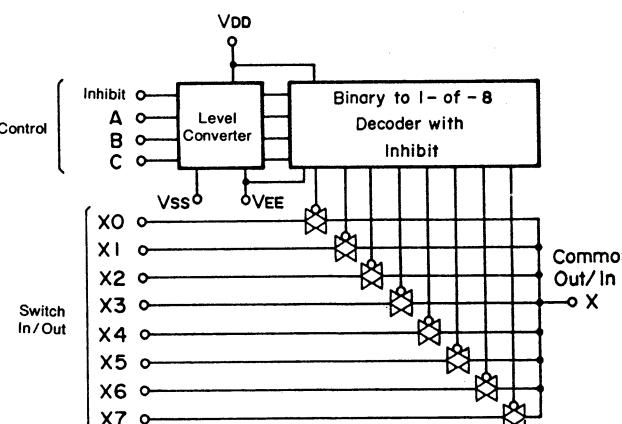

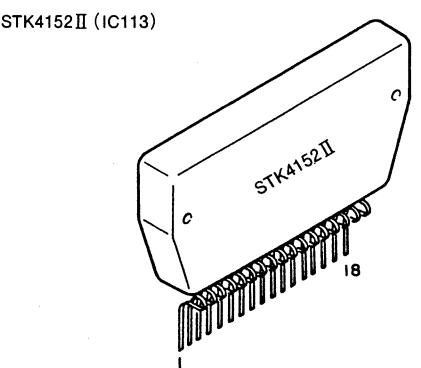

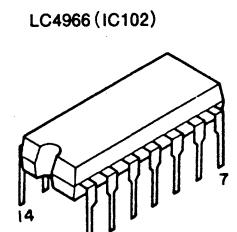

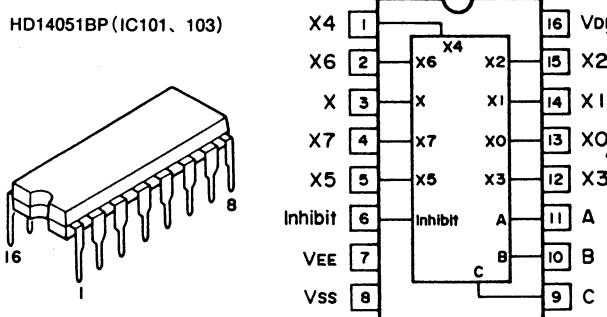

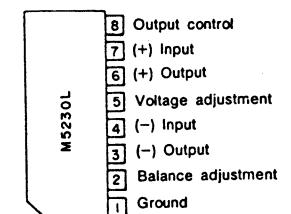

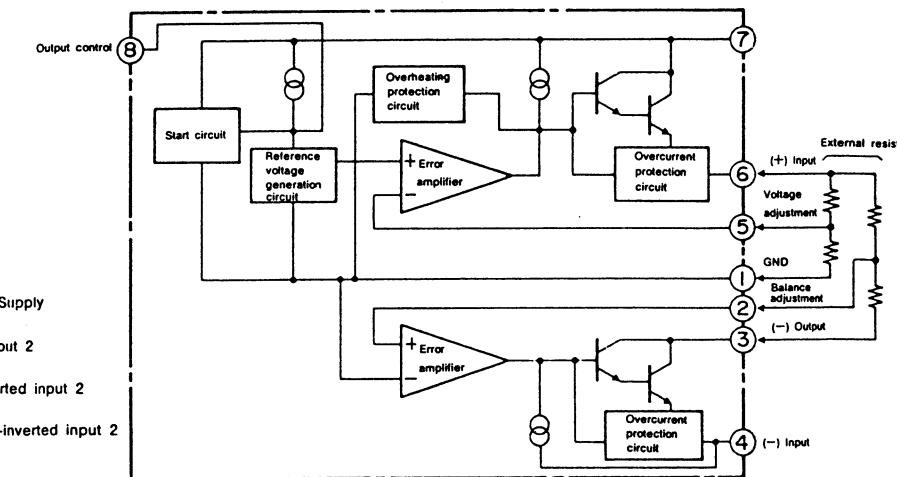

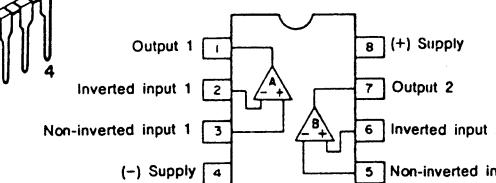

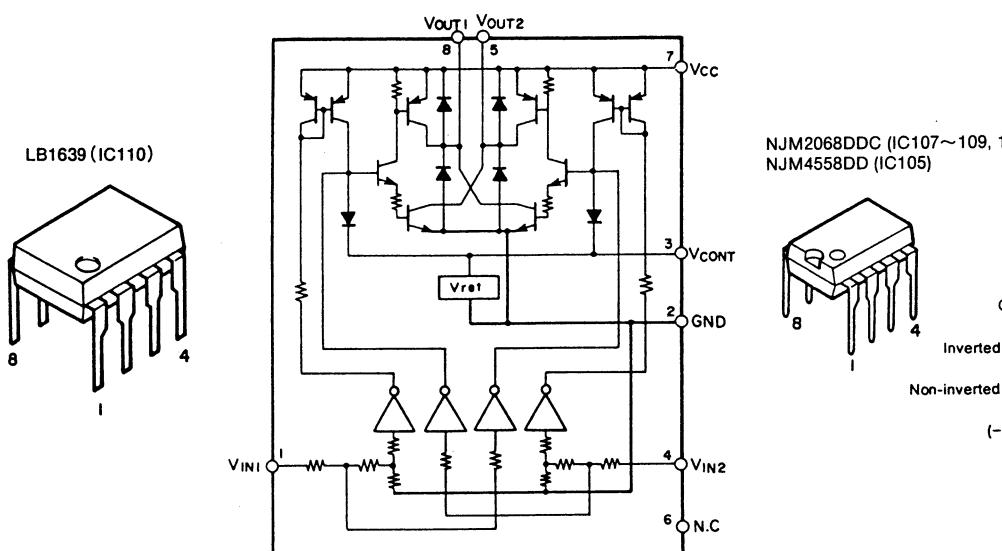

Pin Description

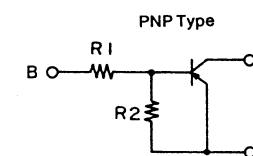

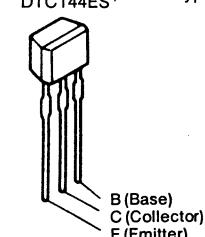

- S1 through S43 : Segment output pins
- S46 (DSP1), S44 (DSP2) : Segment output or DSP input pins
- S47 (AD1), S45 (AD2) : Segment output or AD input pins
- S48 (DSPOUT) : Segment output of DSP output pin
- S49 through S53 (AD01 through 5) : Segment output or AD output pins
- COM1, 2 : Common output pins (Only COM1 is used at time of 1/1 duty, and COM2 is set open)
- V_{LCD} : LCD bias voltage setting pin
- OSC : Oscillation pin
- CE, CLK, DATA : Input pin for serial data transfer
- V_{SS}, V_{DD} : Supply pins
- INH : Display-off input pin. (Valid only with the output driver. This means that the transfer of serial data is possible while the display is off.)
- OPEN : No connection is made.

MICROPROCESSOR DOCUMENTATION

HD404729B20FS: 2621484003

1. Overview

The functions of this microcomputer are made up of the following three pillars.

a. Tuner functions

These functions perform the required control for the reception of FM and AM broadcasts.

b. Auto Functions

b. Auto Functions
Positioned at the heart of the system stereo, the auto functions perform serial communications with other components (such as the deck, CD, and amplifier) to provide overall control.

These functions do

c. Timer functions

Counts the clock.

Note 1: When buttons **1** and **7** of the wiring diagram are pressed simultaneously and the power cord is inserted into the power outlet, the

frequencies used for the tracking adjustment will auto-

Use this information for tuning and other procedures.										
	P1	P2	P3	P4	P5	P6	P7	P8	P9	P10
FM (MHz)	87.50	89.00	98.00	100.10	108.00	87.50	87.50	87.50	87.50	87.50
	P11	P12	P13	P14	P15	P16	P17	P18	P19	P20
MW (kHz)	522	603	846	999	1,098	1,404	1,512	1,611	522	522
	P21	P22	P23	P24	P25	P26	P27	P28	P29	P30
LW (kHz)	153	173	254	279	163	216	270	153	153	153

2. Receiving Band Table

Band	Receiving frequency	Local oscillator frequency	IF frequency	Frequency division ratio	Comparison frequency	Step frequency	Other
FM	87.50~108.00 MHz	98.2~118.9 MHz	10.7 MHz	1/2	25 kHz	50 kHz	STEREO
MW	522~1611 kHz	972~2061 kHz	450 kHz	—	9 kHz	9 kHz	
LW	153~279 kHz	603~729 kHz	450 kHz	—	1 kHz	1 kHz	

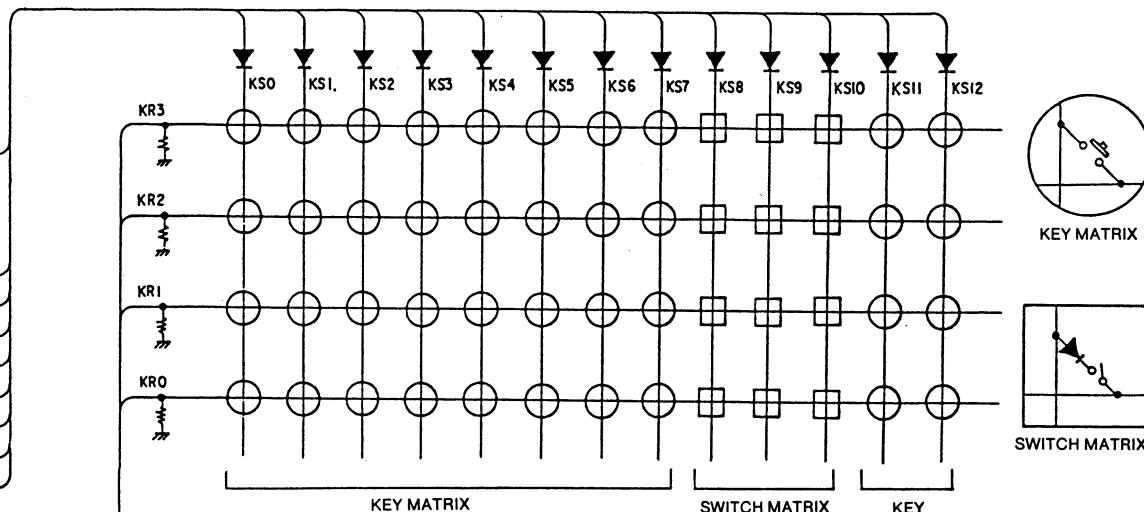

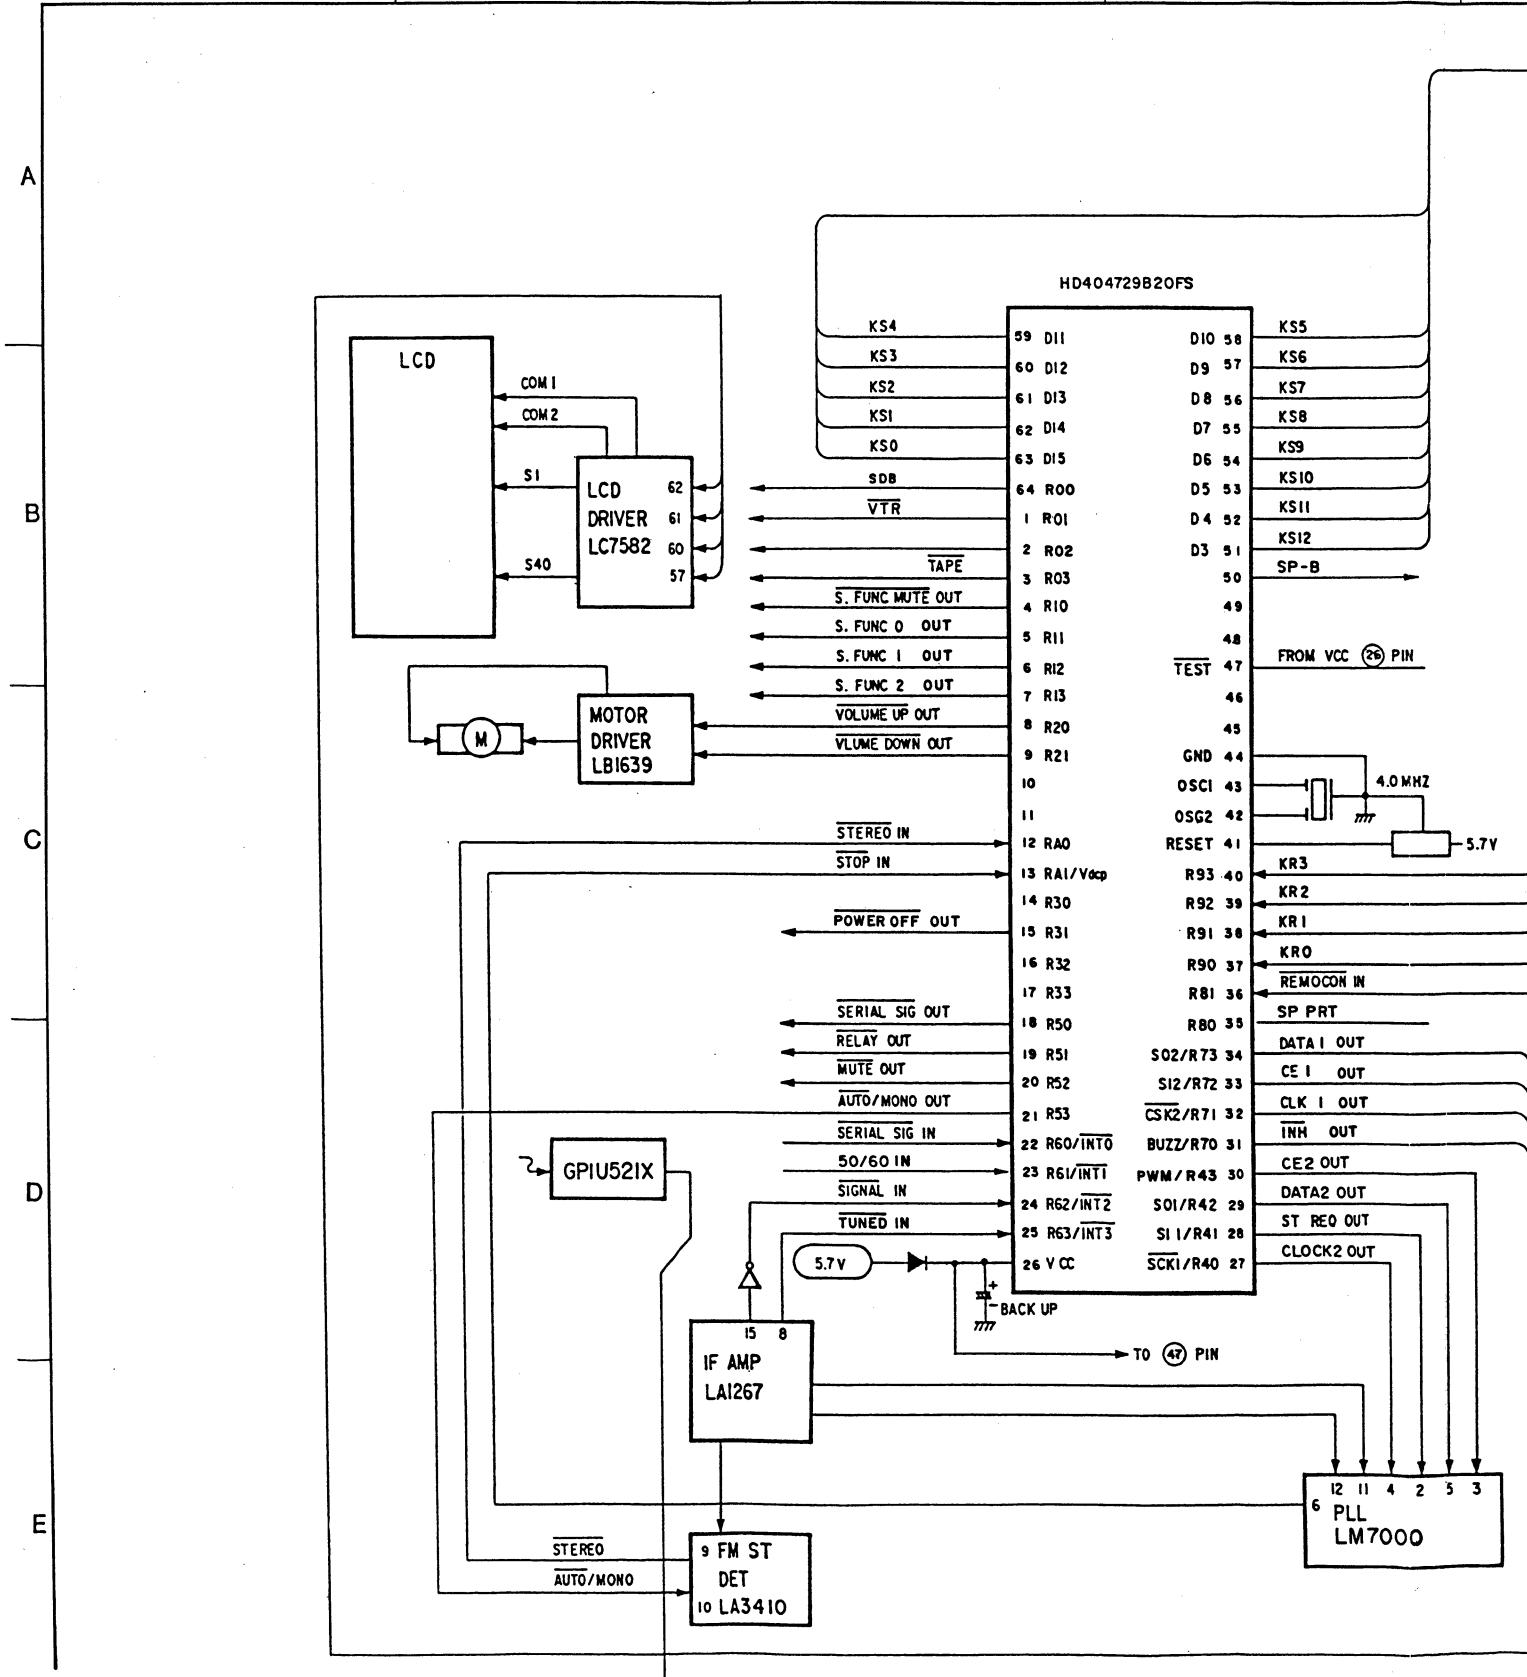

3. Description of Key and Selection Switch Inputs

No.	Function name	Function
1	P1-P10	Input keys for preset station calling and preset storage. P1 through P10 provide a numerical key pad function when making a time setting. The P10 key operates as a zero.
2	P+10	Specifies 10 stations to be added to the stored stations when making preset station calls and preset storage.
4	BAND	Operates in a cyclic manner to specify switching to the FM or MW or LW receiving modes.
7	FREQ, UP	<p>*In the tuner mode Changes the receiving frequency upward one step at a time. When held for 0.5 seconds or longer, the change is continuous. The unit enters the auto tuning mode the moment the key is released. Pressing the key again engages the step operation.</p> <p>*In the clock mode Becomes the lower digits shift key of the display. (→)</p>
8	FREQ, DOWN	<p>*In the tuner mode Changes the receiving frequency downward one step at a time. When held for 0.5 seconds or longer, the change is continuous. The unit enters the auto tuning mode the moment the key is released. Pressing the key again engages the step operation.</p> <p>*In the clock mode Becomes the upper digits shift key of the display. (←)</p>
10	MODE	At the time of FM reception, specifies the switching of the receiving mode between the stereo / mono auto mode and the forced mono mode.
14	CLEAR	Orders the clearing of the timer setting contents.
15	CLOCK ADJ	<p>Orders a switch to the time setting mode. Operates as the ENT key for the time setting in the time setting mode. At this time the P1 through P10 keys operate as a numerical key pad, but the P+10 key is not accepted.</p> <p>*To escape from this mode part way through a time setting, press the CLEAR key.</p>
16	ONCE	Provides a transition to the setting mode which operates the timer only once each day at the set time.
17	SLEEP	Provides a transition to the mode which switches the power off after a set time within 60 minutes. (On remote control)
18	POWER	Provides a toggle operation of RELAY OUT (H and L) which switches the power of other components of the system on and off.
19	STAND BY	<p>Pressing this key selects whether or not the timer operation is performed. To engage the timer operation, use this key to light the stand by mark on the LCD.</p>
21	TIMER START	<p>Press this key to select the component of the system from which the start operation is to begin when the once timer is switched on.</p> <p>*The function selected by this key is stored. When the power is switched on at the timer setting time, the start code of the component is output.</p>
22	FUNC	<p style="text-align: center;">↓</p> <div style="border: 1px solid black; padding: 5px; display: inline-block;"> TUNER → TEPE → CD → PHONO → DAT </div>
26	DISPLAY	Switches between the clock display and the frequency display.
27	MEMORY	<p>*In the tuner mode Provides a transition to the mode which registers the stations being received to preset memory. The "MEMORY" display will flash. Registration is accomplished by pressing the P1 through P10 keys and the P+10 key.</p>

4. IC HD404729B20FS Pin Description (See the Peripheral Wiring Diagram of Page 20.)

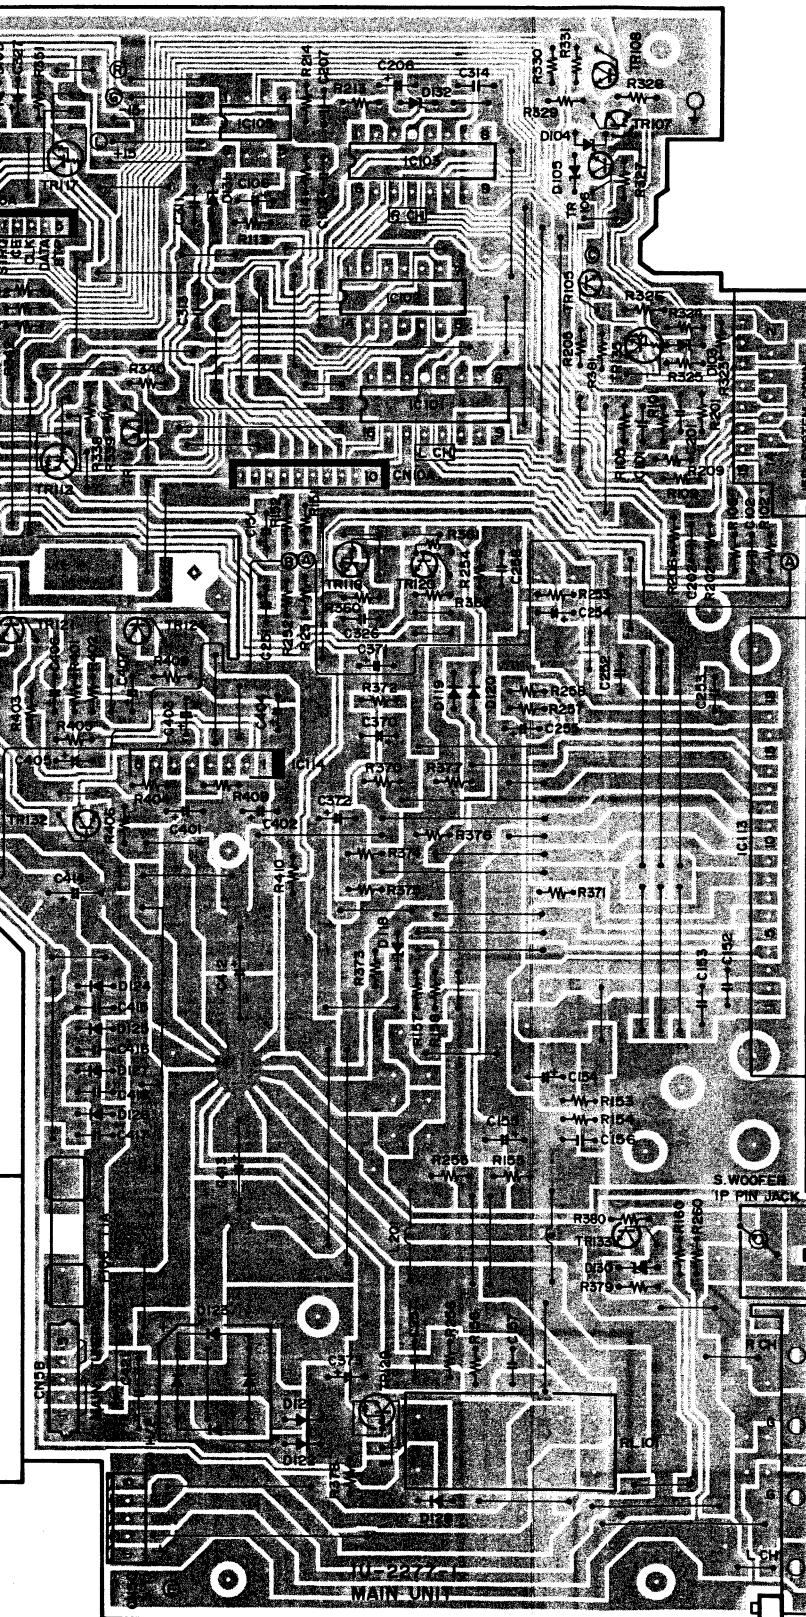

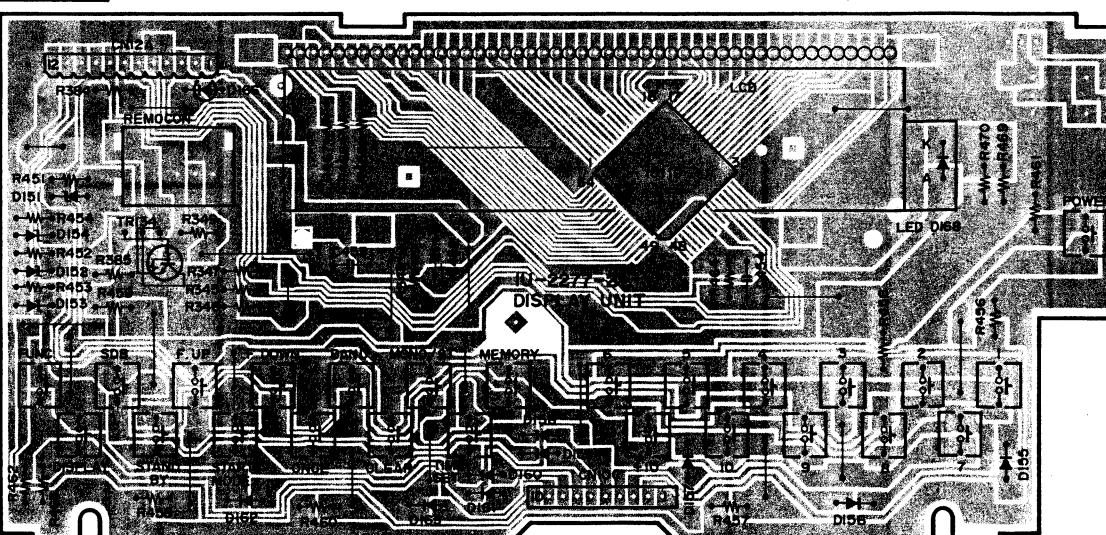

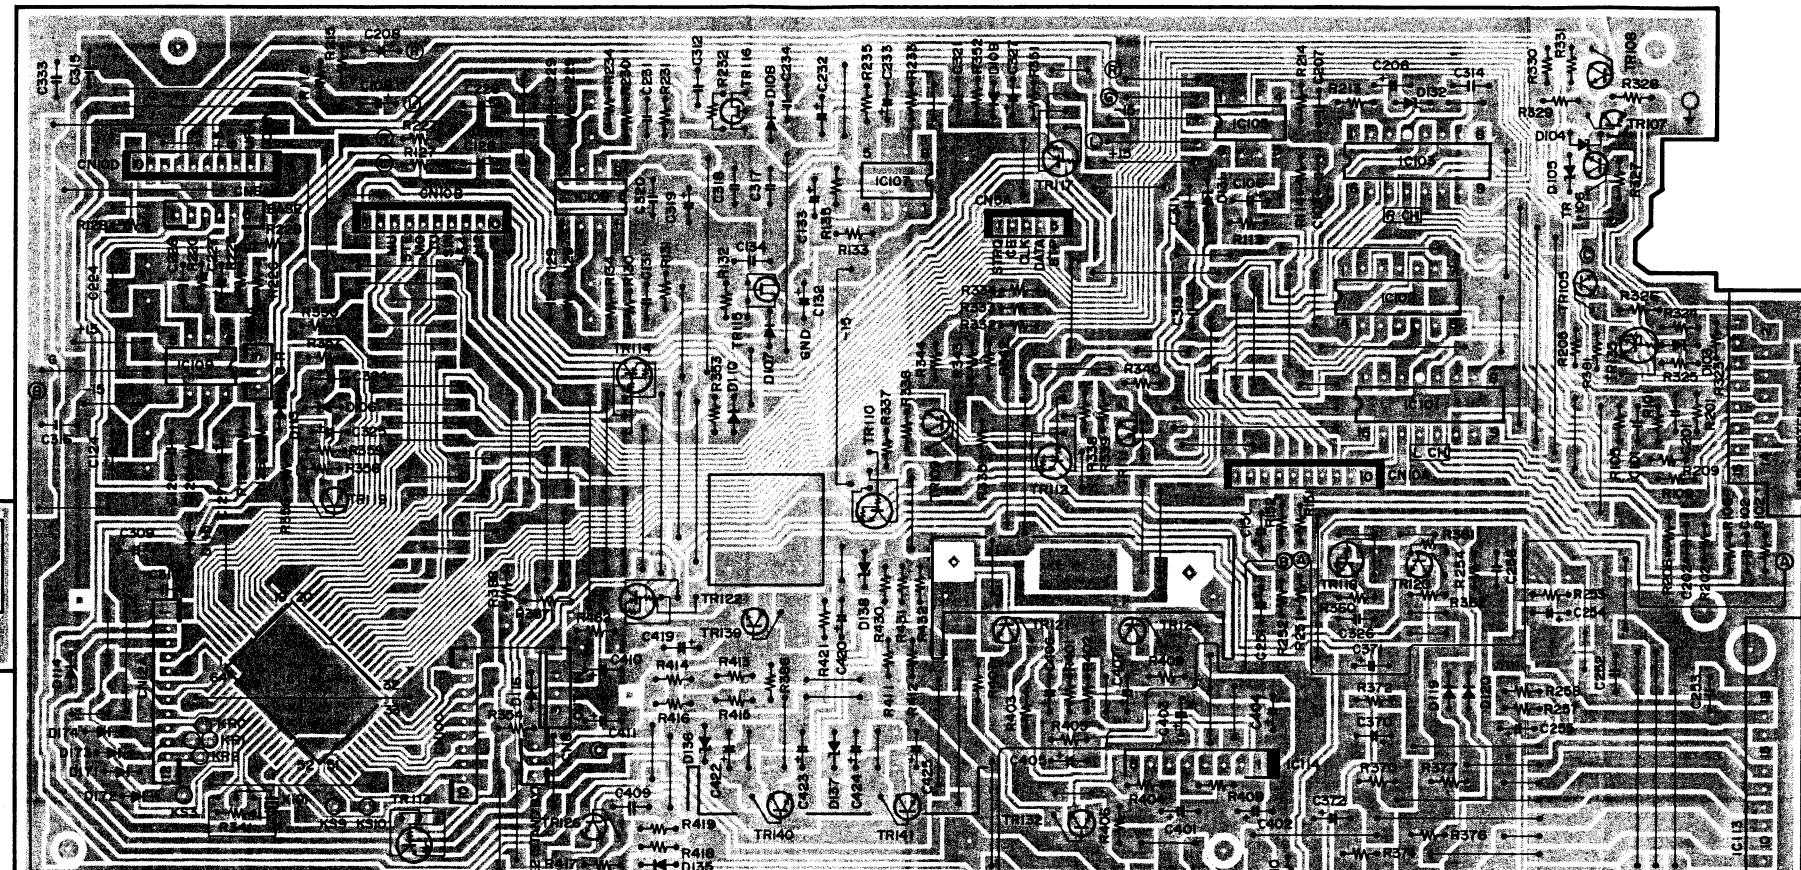

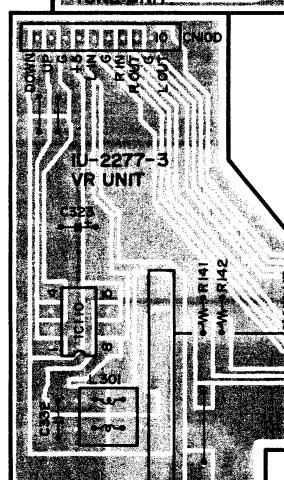

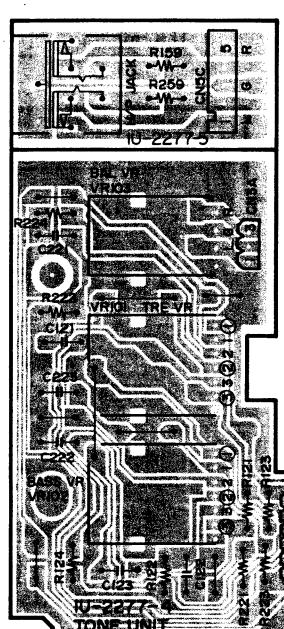

PIN NO.	Port Name	Function Name	Function
1	R02	VTR	Control signal output pin when the function has been set to DAT.
3	R03	TAPE	Control signal output pin when the function has been set to DAT.
4	R10	S.FUNC MUTE OUT	Outputs the muting output when there is a change of the S. FUNC0-2 OUT pin output.
5	R11	S.FUNC 0 OUT	Output pin for selecting the function.
6	R12	S.FUNC 1 OUT	Output pin for selecting the function.
7	R13	S.FUNC 2 OUT	Output pin for selecting the function.
8	R20	VOLUME UP OUT	Output pin used for the motor drive volume control. Up = low level
9	R21	VOLUME DOWN OUT	Output pin used for the motor drive volume control. Down = low level
12	RA0	STEREO IN	Input signal for taking in the stereo display signal from the FM MPX IC and displaying it on the LCD.
13	RA1	STOP IN	Input pin which takes in the signal that is output from the programmable divider when a station is tuned during auto tuning (i.e., when the IF count reaches the specified value).
15	R31	POWER OFF OUT	Control output pin used when the power is switched on and off. Power on = low level Power off = high level
18	R50	SERIAL SIG OUT	Output pin for sending serial signals. TXD
19	R51	RELAY OUT	This output pin is synchronized with the POWER button and performs a toggle operation. It drives a relay for switching the power on and off to another piece of equipment.
20	R52	MUTE OUT	Control signal output pin for applying muting to the audio output of the tuner.
21	R53	AUTO/MONO OUT	This signal output pin is synchronized with the input of the MULTI MODE button at the time of FM reception and performs a toggle operation. It is used to control the monaural/stereo switching pin of the FM MPX IC.
22	R60/INT0	SERIAL SIG IN	Input pin for handling serial communications. RXD
23	R61/INT1	50/60 IN	50/60 Hz half wave rectification pulse input pin. (Half wave)
24	R62/INT2	SIGNAL IN	Input pin for detecting that a station is in the vicinity during auto tuning. Active low.
25	R63/INT3	TUNED IN	Pin for taking in the signal when the tuning circuit has been properly tuned. Low level when tuned.
26	Vcc		5V supply pin. (For back ups)
27	R40/SCK1	CLOCK 2 OUT	Clock output pin used for serial data when data is sent to the programmable divider.
28	R41/SI1	ST REQ OUT	Output pin for requesting that the IC count operation be started to the programmable divider when the signal of a local station has been input from the detection IC during auto tuning.
29	R42/SO1	DATA 2 OUT	Serial data output pin for sending data to the programmable divider of the PLL IC.
30	R43/PWN	CE 2 OUT	This (output) pin is set to high level when sending data to the programmable divider, and when finished, the pin is returned to low level and serves to latch the register.
31	R70/BUZZ	INH OUT	Output pin used for forcing off the display of the LCD driver. Low level = forced off High level = display

PIN NO.	Port Name	Function Name	Function
32	R71/SCK2	CLK 1 OUT	Clock output pin for serial data transmission, used for sending data to the LCD driver.
34	R73/SO2	DATA 1 OUT	Output pin used for sending data to the LCD driver.
36	R81	REMOCON IN	Input pin for the remote control.
37	R90	KR 0 IN	KEY RETURN pulse input pin.
38	R91	KR 1 IN	KEY RETURN pulse input pin.
39	R92	KR 2 IN	KEY RETURN pulse input pin.
40	R93	KR 3 IN	KEY RETURN pulse input pin.
41	RESET		System reset input pin for the microprocessor.
42	OSC 2		System clock input pin for the microprocessor.
43	OSC 1		System clock input pin for the microprocessor. (f = 4 MHz)
44	GND		Ground pin.
47	TEST		Connected to the Vcc (pin 26) pin.
51	D 3	KS12 OUT	KEY STROBE PULSE output pin.
52	D 4	KS11 OUT	KEY STROBE PULSE output pin.
53	D 5	KS10 OUT	KEY STROBE PULSE output pin.
54	D 6	KS 9 OUT	KEY STROBE PULSE output pin.
55	D 7	KS 8 OUT	KEY STROBE PULSE output pin.
56	D 8	KS 7 OUT	KEY STROBE PULSE output pin.
57	D 9	KS 6 OUT	KEY STROBE PULSE output pin.
58	R10	KS 5 OUT	KEY STROBE PULSE output pin.
59	D11/FS 4	KS 4 OUT	KEY STROBE PULSE output pin.
60	D12/FS 3	KS 3 OUT	KEY STROBE PULSE output pin.
61	D13/FS 2	KS 2 OUT	KEY STROBE PULSE output pin.
62	D14/FS 1	KS 1 OUT	KEY STROBE PULSE output pin.
63	D15/FS 0	KS 0 OUT	KEY STROBE PULSE output pin.
64	R00	SDB	Control output pin for switching SDB on and off. On = high level Off = low level

NOTE FOR PARTS LIST

- Part indicated with the mark "◎" are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.
- Not including Carbon Film ±5%, 1/4 W Type in the P. W. Board parts list. (Refer to the Schematic Diagram for those parts.)

• Resistors

Ex.: RN	14K	2E	182	G	FR
Type	Shape and performance	Power	Resistance	Allowable error	Others

RD : Carbon	2B : 1W	F : ±1%	P : Pulse-resistant type
RC : Fixed	2E : 1W	G : ±2%	NL : Low noise type
RS : Metallic film	2H : 1W	J : ±5%	NB : Non-burning type
RW : Winding	3A : 1W	K : ±10%	FR : Fuse resistor
RN : Metal film	3D : 2W	M : ±20%	F : Lead wire forming
RK : Metal mixture	3F : 3W		
	3H : 5W		

* Resistance

1 8 2 ⇒ 1800 ohm = 1.8 kohm

Indicates number of zeros after effective number
 2-digit effective number, decimal point indicated by R.
 • Units: ohm

• Capacitors

Ex.: CE	04W	1H	2R2	M	BP
Type	Shape and performance	Dielectric strength	Capacity	Allowable error	Others

CE : Aluminum foil electrolyte	0J : 6.3V	F : ±1%	HS : High stability type
CA : Aluminum solid electrolyte	1A : 10V	G : ±2%	BP : Non-polar type
CS : Tantalum electrolyte	1C : 16V	J : ±5%	HR : Ripple-resistant type
CQ : Film	1E : 25V	K : ±10%	DL : For charge and discharge
CK : Ceramic	1V : 35V	M : ±20%	HF : For assuring high frequency
CC : Ceramic	1H : 50V	Z : +80%	U : UL part
CP : Oil	2A : 100V	-20%	C : CSA part
CM : Mica	2B : 125V	P : +100%	W : UL-CSA type
CF : Metallized	2C : 160V	-0%	F : Lead wire forming
CH : Metallized	2D : 200V	C : ±0.25pF	
	2E : 250V	D : ±0.5pF	
	2H : 500V	-	Others
	2J : 630V		

* Capacity

2 R 2 ⇒ 2.2 μF

1-digit effective number, decimal point indicated by R.
 2-digit effective number, decimal point indicated by R.
 • Units: μF, (for P, pF (μμF))
 • When the dielectric strength is indicated in AC, "AC" is included after the dielectric strength value.

WARNING:
Parts marked with this symbol  have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

CAUTION:

CAUTION: Before returning the unit to the customer, make sure you make either (1) a leakage current check or (2) a line to chassis resistance check. If the leakage current exceeds 0.5 millamps, or if the resistance from chassis to either side of the power cord is less than 240 k ohms, the unit is defective.

WARNING

WARNING
DO NOT return the unit to the customer until the problem is located and corrected.

NOTES

ALL RESISTANCE VALUES IN OHM K=1,000 OHM M=1,000,000 OHM

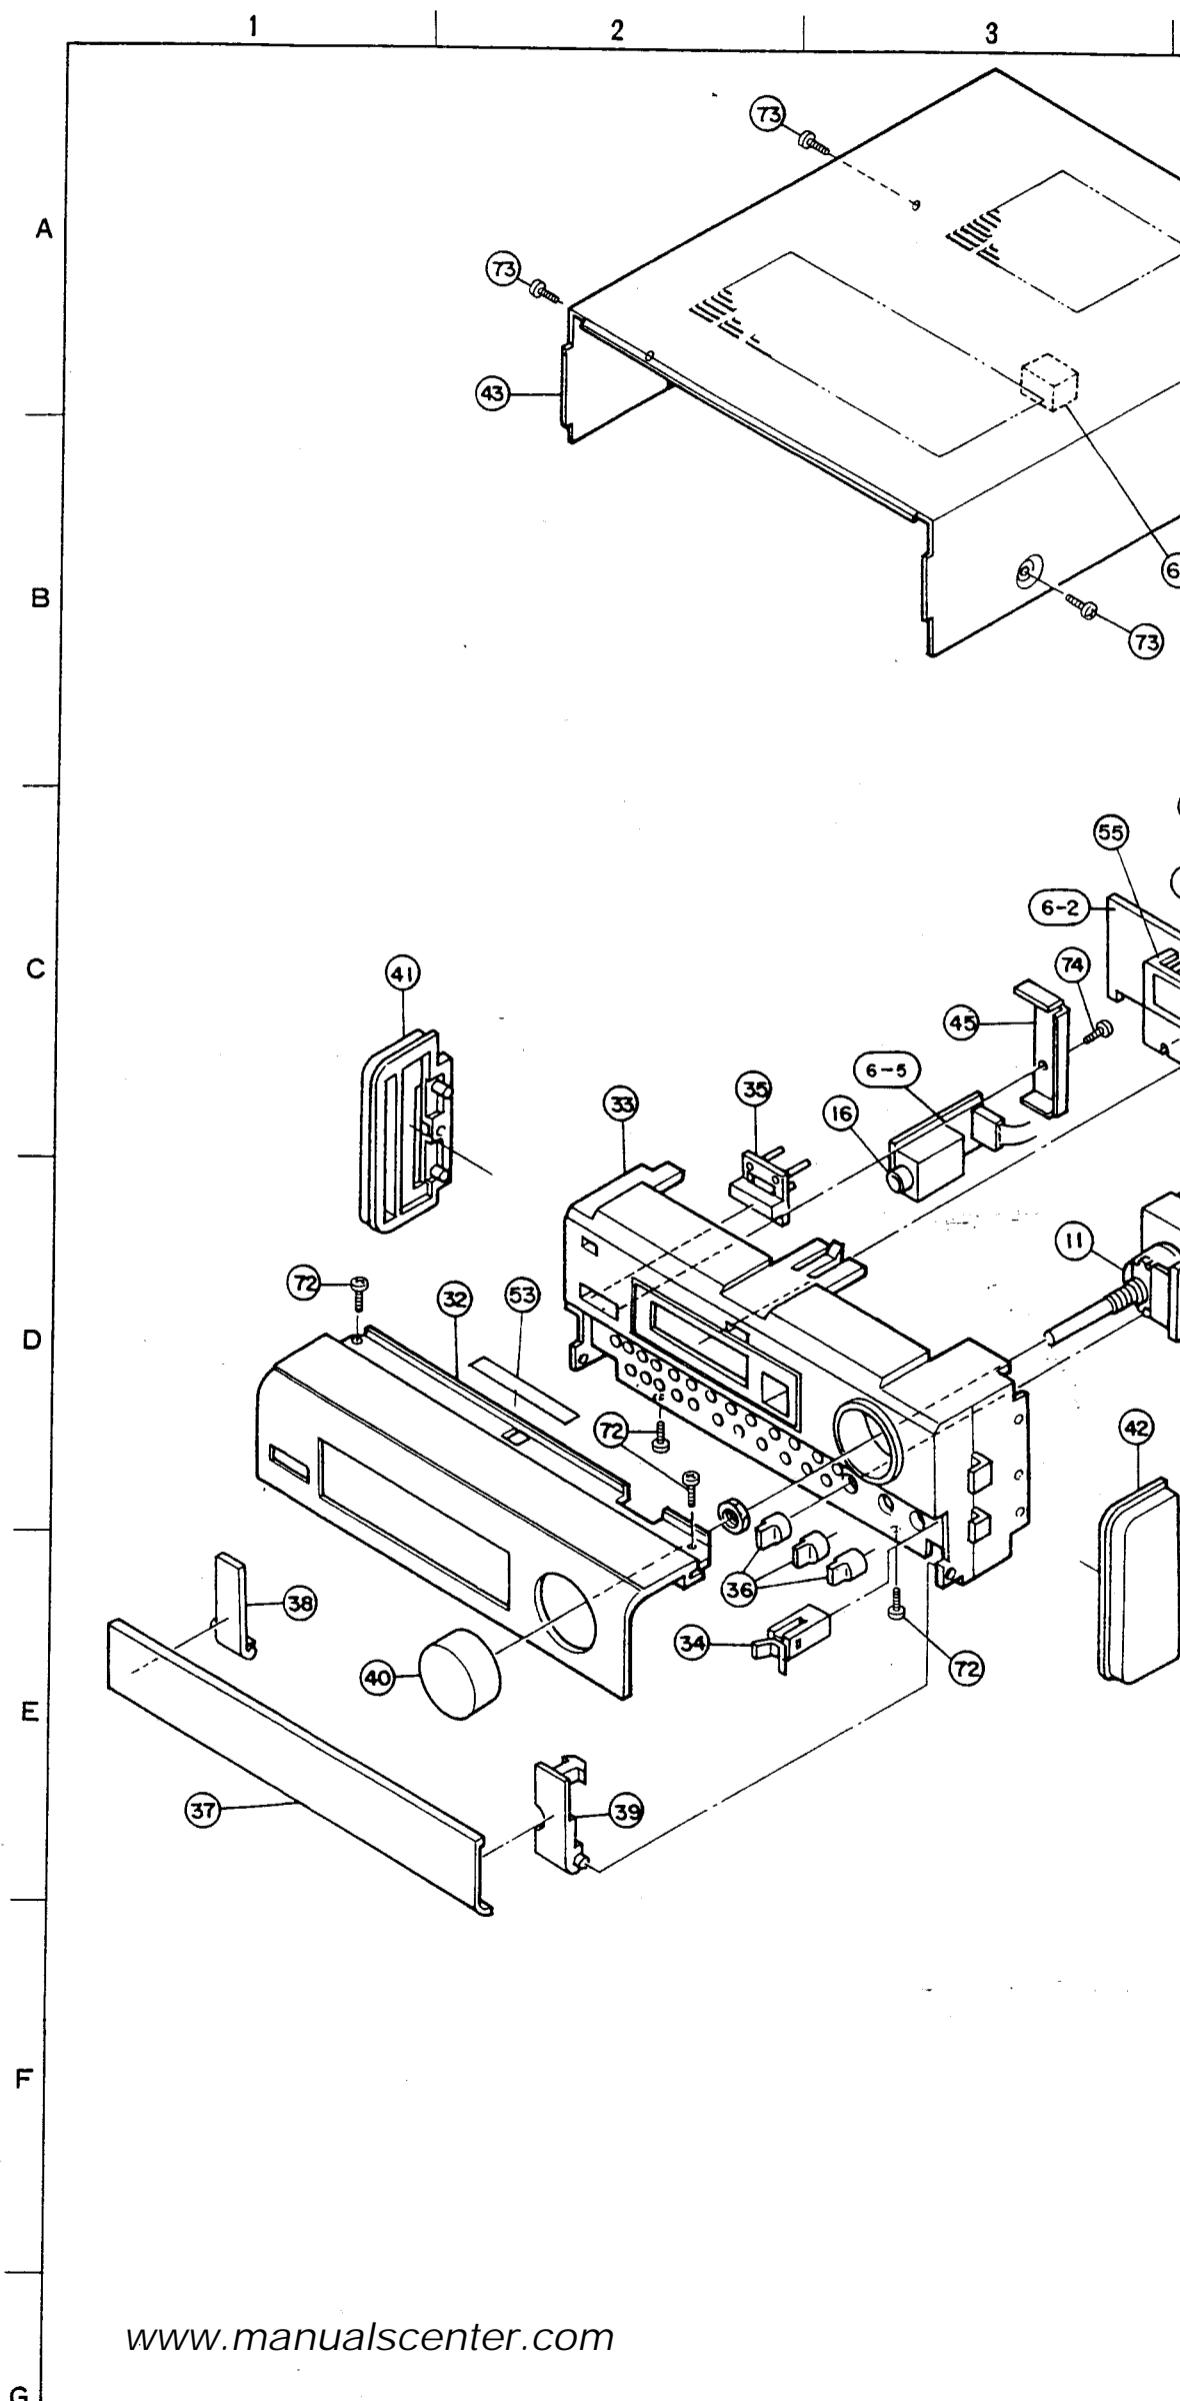

ALL CAPACITANCE VALUES IN MICRO FARAD P=MICRO-MICRO FARAD

ALL CIRCUITRY AND PARTS IN THIS DOCUMENT ARE FOR R&D PURPOSES ONLY.
EACH VOLTAGE AND CURRENT ARE MEASURED AT NO SIGNAL INPUT CONDITION.
CIRCUIT AND PARTS ARE SUBJECT TO CHANGE WITHOUT PRIOR NOTICE.

NOTE FOR PARTS LIST

- NOTE FOR PARTS LIST**

 - Part indicated with the mark “●” are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
 - When ordering of part, clearly indicate “1” and “!” (i) to avoid mis-supplying.
 - Ordering part without stating its part number can not be supplied.
 - Part indicated with the mark “△” is a little difficult to supply.

WARNING:

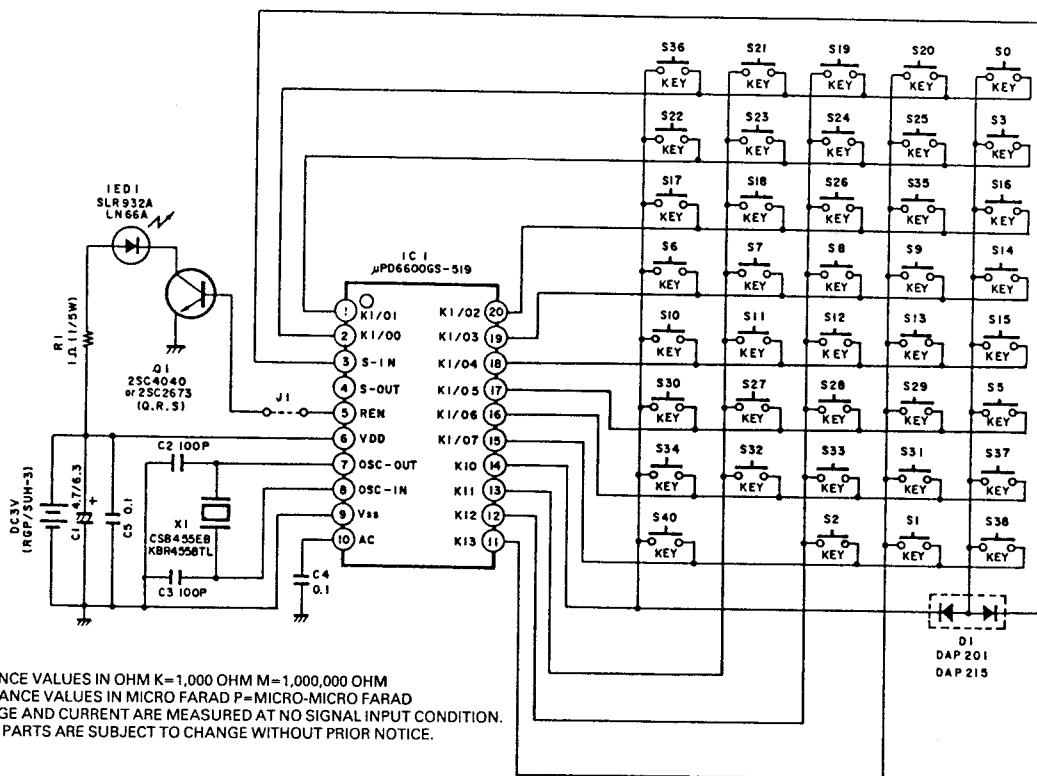

WARNING:
Parts marked with this symbol have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

CASSETTE DECK SECTION

PART NAMES AND FUNCTIONS

CASSETTE DECK

① Cassette tray

The cassette tray opens out when the OPEN/CLOSE button ⑥ is pressed. Insert the cassette tape with the side on which the tape is exposed facing away from you. To close the cassette tray, press the OPEN/CLOSE button ⑥ again.

② ▶ (forward playback button):

Press this button to record or play the tape in the forward direction.

◀ (reverse playback button):

Press this button to record or play the tape in the reverse direction.

③ ■ (stop button):

Press this button while the tape is moving to stop the tape.

④ Playback direction indicators

This flashes during playback.

⑤ Recording indicator

This lights when the recording or recording standby mode is set using the REC/REC MUTE button ⑩, and flashes during the recording mute mode.

⑥ ▲ OPEN/CLOSE button

Press this button to open and close the cassette tray.

⑦ ◀ (rewind button):

Press this button to rewind the tape. When pressed, the playback direction indicators ④ flash.

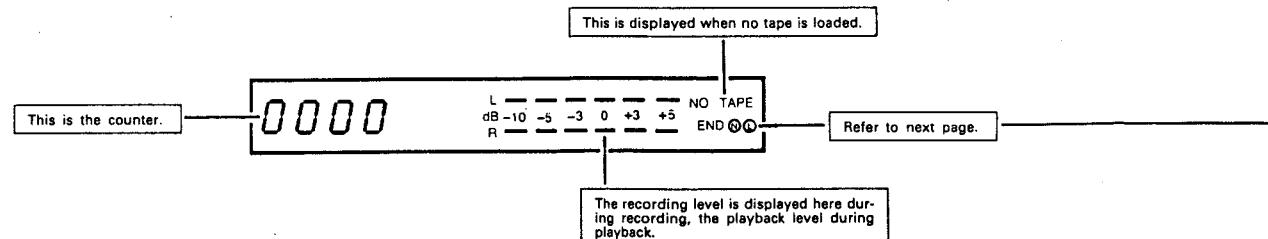

Also, if pressed during playback in the ▶ (forward) direction, the tape is rewound to the beginning of the current selection. If pressed during playback in the ▲ (reverse) direction, the tape is forwarded to the beginning of the next selection.

▶ (fast-forward button):

Press this button to fast-forward the tape. When pressed, the playback direction indicators ④ flash.

Also, if pressed during playback in the ▶ (forward) direction, the tape is forwarded to the beginning of the next selection. If pressed during playback in the ▲ (reverse) direction, the tape is rewound to the beginning of the current selection.

CASSETTE DECK DISPLAY

Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation.
"DOLBY" and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation.

⑧ COUNTER RESET button

Press this button to reset the tape counter to "0000".

⑨ CD SRS (CD synchronized recording button)

Use this button for CD synchronized recording. Refer to Page 77.

⑩ REC / REC MUTE (recording/recording mute) button

To record, press the REC/REC MUTE button and the ▶ PLAY button. If only the REC/REC MUTE button is pressed, the deck is set to the recording pause mode. If pressed during recording, the deck is set to the recording mute mode for approximately 5 seconds, after which it is set to the recording pause mode.

⑪ INPUT LEVEL control

Use this control to set the recording level.

⑫ DOLBY NR selector switch

Use this switch to select the Dolby NR mode, OFF, B or C. During playback, set this switch to the same mode in which the tape was recorded.

⑬ REV. MODE switch

Use this to set the reverse mode to one of the following modes: ▷ (one side mode), ▷ (reverse mode), ▷ (continuous mode). In the continuous mode, the tape stops automatically after both sides are played five times. Refer to Page 11.

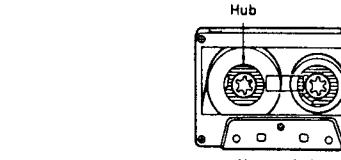

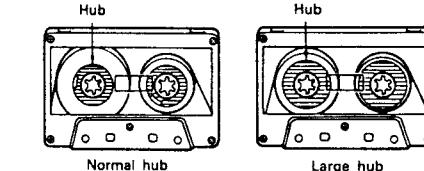

Remaining Tape Indicators - END, ④ and ⑤

These indicators notify that the tape is reaching the end during recording and playback. The indicators differ according to the diameter of the tape hub. END : This starts flashing when the tape is nearing the end during recording or playback, then stops flashing and remains lit once the end of the tape is reached. After this, the indicator turns off as soon as another mode is set.

④ : For normal hubs, ④ and END light when the tape is nearing the end. Use these two indicators to determine the amount of tape remaining. The indicator lights when the tape is nearing the end, then turns off when the tape stops.

⑤ : When recording or playing tapes with large hubs, ④ and END light when the tape is nearing the end. Use these two indicators to determine the amount of tape remaining. The indicator lights when the tape is nearing the end, then turns off when the tape stops.

Example 1: About 5 minutes from the end of the tape during playback in the forward direction on a 60-minute tape with normal hubs:
• Large hubs are hubs with a diameter of about 27mm.
Note that if the hub is larger than this, there may be a major error in indicating the remaining time.

Example 2: About 8 minutes from the end of the tape during playback in the forward direction on a 60-minute tape with large hubs:

Example 3: About 5 minutes from the end of the tape during playback in the reverse direction on a 60-minute tape with normal hubs:

Example 4: About 5 minutes from the end of the tape during playback in the reverse direction on a 60-minute tape with large hubs:

• Use the following table to determine the approximate time to the end of the tape when the END, ④ and ⑤ indicators start flashing or stop flashing, remaining lit:

Hub diameter Tape length	Normal hub		Large hub	
	Playback in forward direction	Playback in reverse direction	Playback in forward direction	Playback in reverse direction
C-46	Approx. 1 minute	Approx. 5 minutes	Approx. 1 minutes	Approx. 5 minutes
C-60	Approx. 5 minutes	Approx. 5 minutes	Approx. 8 minutes	Approx. 5 minutes
C-90	Approx. 14 minutes	Approx. 6 minutes	-	-

* There are no C-90 tapes with large hubs.

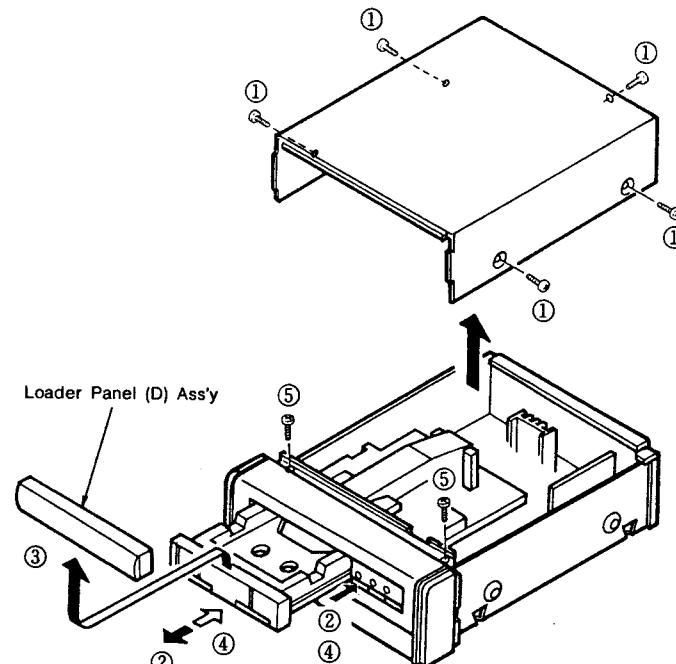

CASSETTE DECK SECTION

REMOVAL OF EACH SECTION

(Follow this procedure in the reverse order when assembling.)

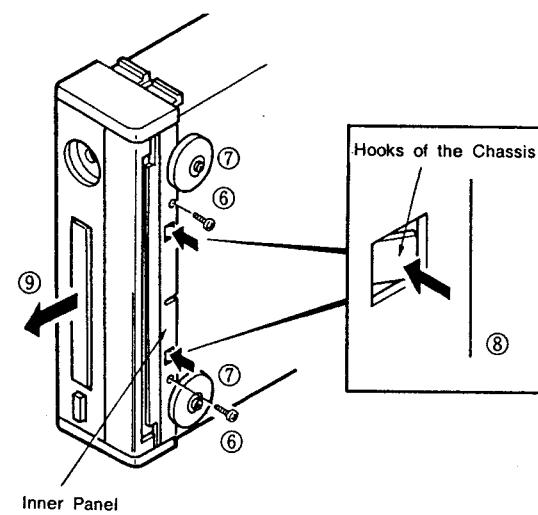

1. Removal of the top cover

- ① Remove the 5 screws which fasten the top cover.
- ② Press the ▲ OPEN/CLOSE button and eject the cassette tray.
- ③ Remove the loader panel (D) assembly in the direction of the arrow.
- ④ Press the ▲ OPEN/CLOSE button and retract the cassette tray.
- ⑤ Remove the 2 screws which fasten the front panel assembly. At this time, remove with care the connector which connects the main unit assembly and the front panel side assembly.

2. Removal of the front panel

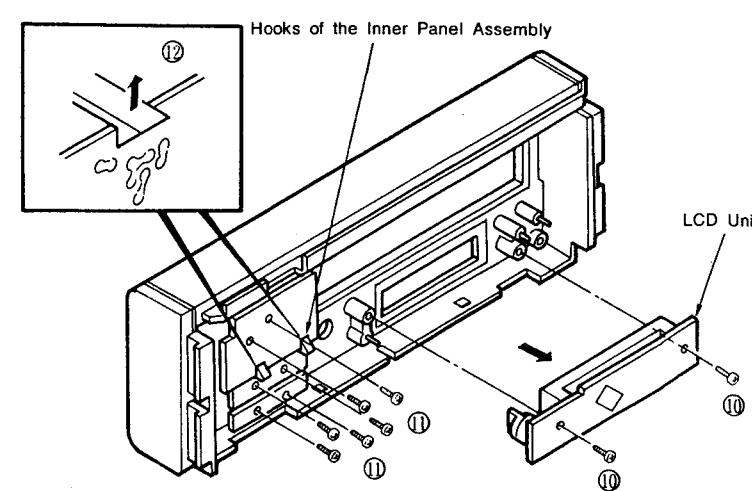

- ⑥ Stand the main unit as illustrated in the diagram and remove the 2 screws which fasten the inner panel assembly.
- ⑦ Slightly loosen the screws of the 2 front legs.
- ⑧ Remove the hooks of the chassis from the inner panel assembly.
- ⑨ Remove the front panel assembly in the direction of the arrow.

3. Removal of the printed wiring board assembly

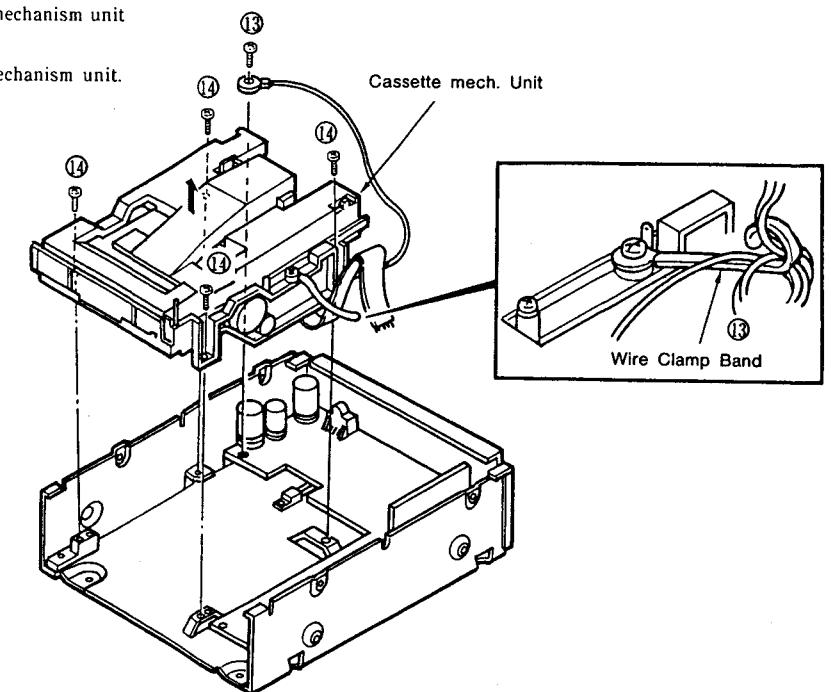

LCD UNIT (1U-2279-4)

- ⑩ Remove the 2 screws which fasten the LCD unit.
- ⑪ Remove the 6 screws which fasten the various boards.
- ⑫ Remove the hooks of the inner panel assembly from the board.

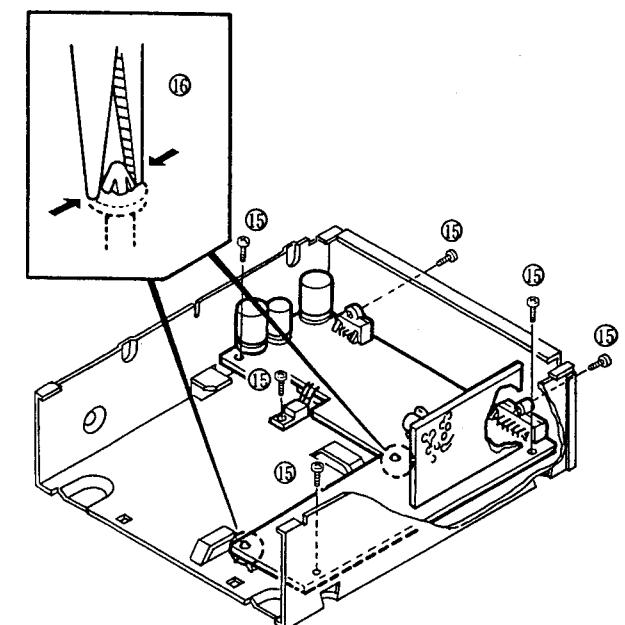

4. Removal of the cassette unit

- ⑬ After loosening the wire clamp band which bundles the wires, remove the connector which connects the cassette mechanism unit and the main unit assembly.
- ⑭ Remove the 4 screws which fasten the cassette mechanism unit.

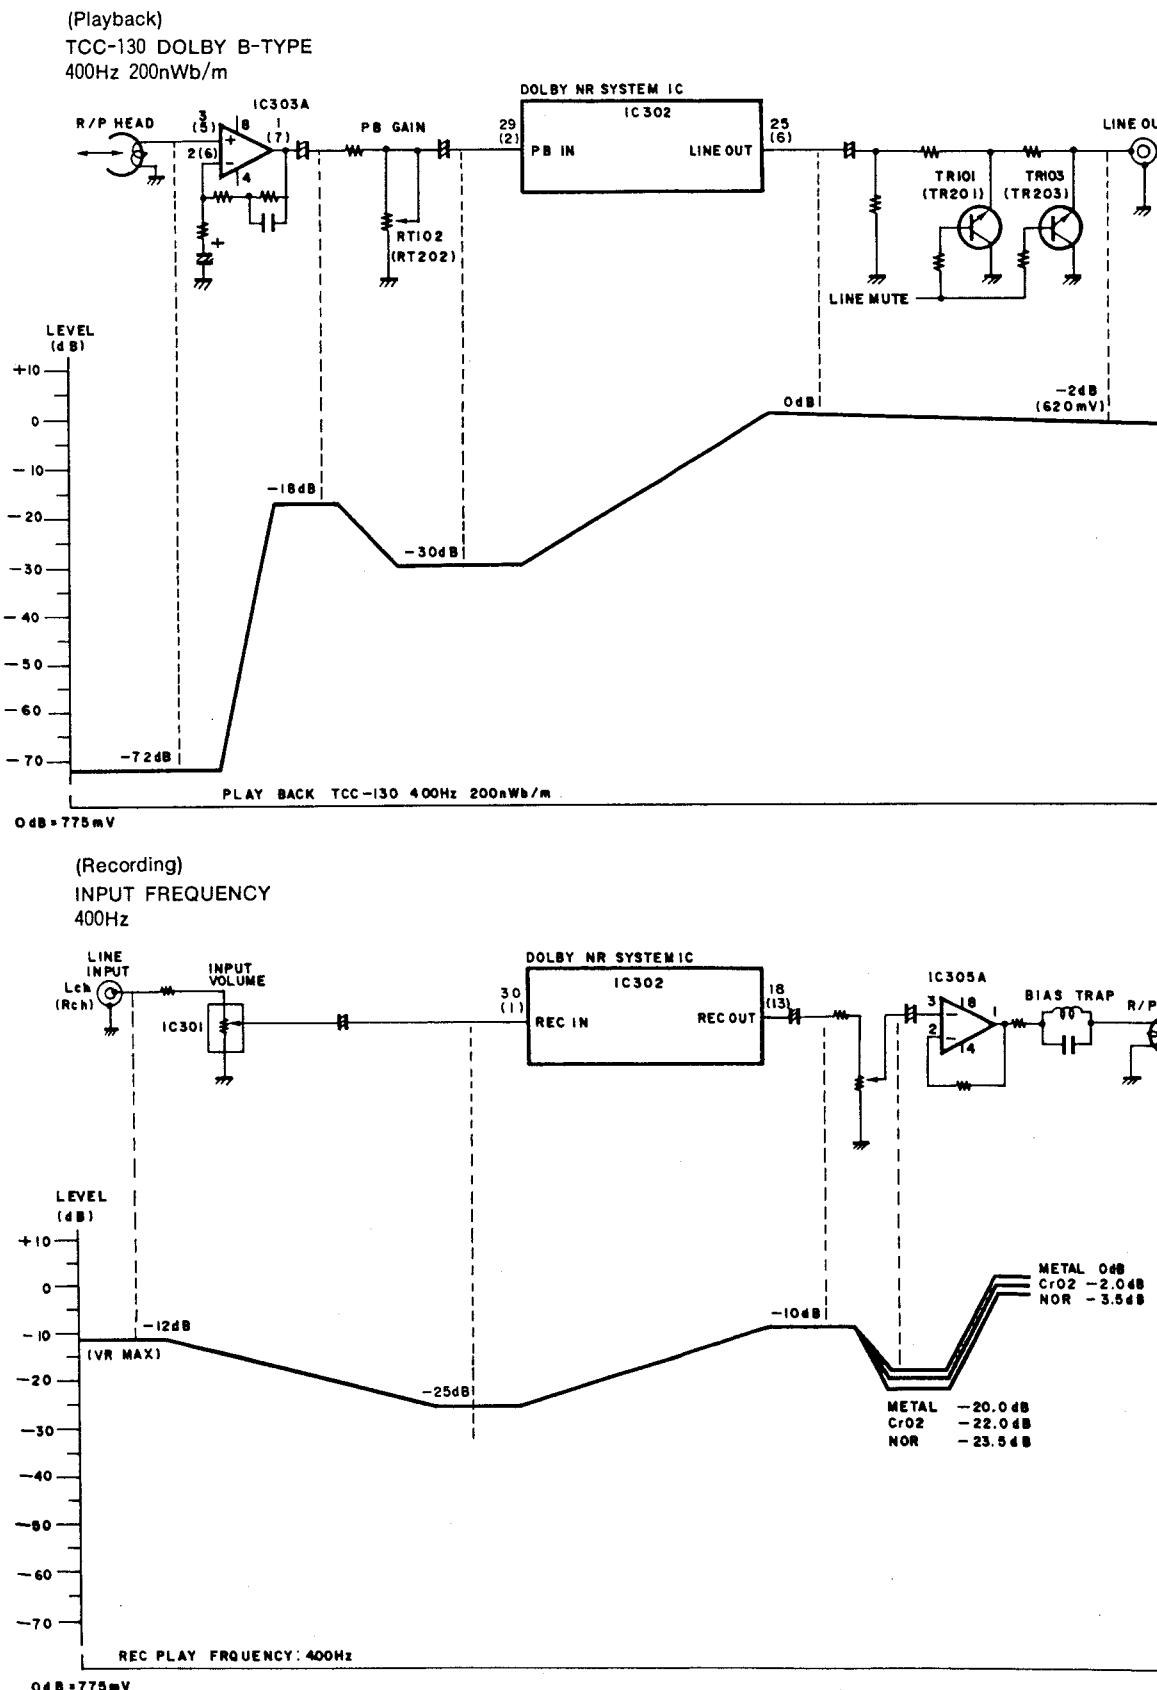

MAIN UNIT ASSEMBLY (1U-2279-1)

- ⑮ Remove the 6 screws which fasten the main unit assembly.
- ⑯ Use radio pliers or another suitable tool to remove the 2 PCB holders which fasten the main unit assembly.

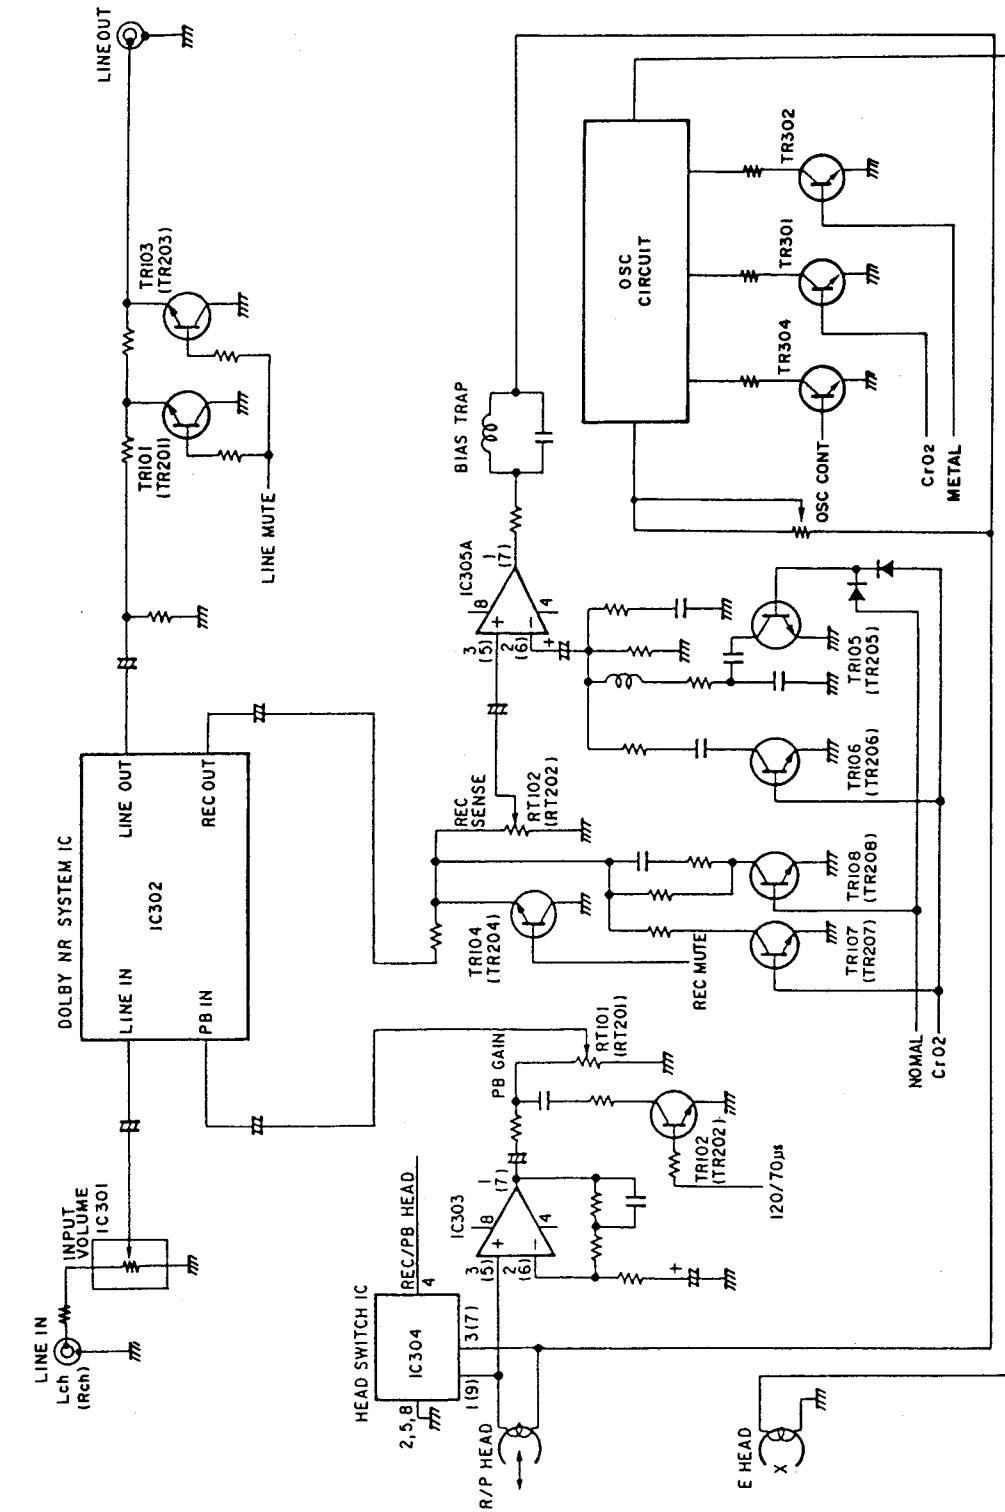

CASSETTE DECK SECTION

LEVEL DIAGRAM

BLOCK DIAGRAM

CASSETTE DECK SECTION

ADJUSTMENT

Adjustment and checking of the mechanism

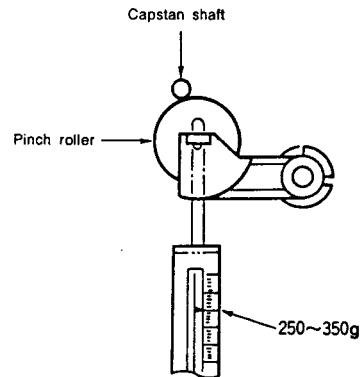

1. Replacement of the pinch roller

Before replacing the pinch roller, clean the tape contact surface of the pinch roller and the tape contact surface of the capstan shaft.
After replacement, run a C-90 tape without a pad and check for the presence of tape curl at the tape guide portion of the head.

2. Checking the pinch roller pressure

Set to the playback condition and hook a bar-type spring scale to the bracket above the center line of the pinch roller. Pull the pinch roller away from the capstan shaft, then allow the pinch roller to come into contact with the capstan shaft and check that the reading of the bar-type spring scale is between 250 g and 350 g when the pinch roller starts to rotate.

Replace the pinch roller when the value falls outside of the specified range.

**3. Replacement of the recording/playback head assembly**

Perform this procedure after removing the front panel.

3-1 Removal of the head assembly

- (1) Remove the 2 head base fastening screws.
- (2) Remove the head base from the reed holder and the wire connector.

3-2 Mounting the recording/playback head assembly

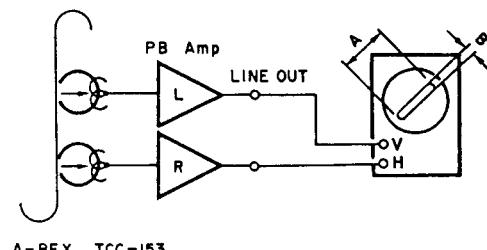

Perform by following the steps of Section 3-1 Removal of the head assembly in reverse.

4. Adjustment of the recording/playback head

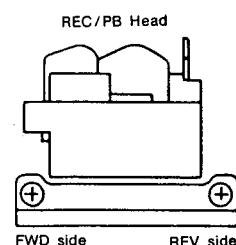

Azimuth adjustment

Load side A of the A-BEX TCC-153 test tape facing forward, and adjust.

- (1) Play in the FWD direction and turn the azimuth adjustment nut for the FWD side so that the Lissajous's figure becomes maximum at (A) and minimum at (B).
- (2) Play in the REV direction and turn the azimuth adjustment nut for the REV side, adjusting the same as in Step (1).
- (3) Repeat Steps (1) and (2), making the adjustments again.
- (4) Apply screw lock to the adjustment locations.

A-BEX TCC-153

CASSETTE DECK SECTION

5. Checking the winding torque

Load a cassette type torque meter (Sony TW2111A at the FWD side, and Sony TW2121A at the REW side) and check that the reading of the torque meter during playback is 30 to 70 g·cm at the center value.

When outside of the specified value range, check the voltage of the reel motor (approx. 4 V). When the voltage value is low, the torque is weak, and when high, the torque is strong.

6. Checking the back tension torque at the time of recording and playback

Load a cassette type torque meter (Sony W2111A at the FWD side, and Sony TWG121A at the REW side) and check that the reading of the torque meter during playback is 2 to 6 g·cm and that there is no unevenness.

7. Checking the FF and REW torque

Load a cassette type torque meter (Sony TW2231) and check that the value indicated by the torque meter for winding and rewinding is between 90 and 180 g·cm.

8. Checking the FF and REW time

Load a DENON HD-X/60 cassette tape, and check that the time for FF and REW is between 80 and 110 seconds. When outside of the specified range, check Steps 5 and 6.

9. Checking the erroneous erasure prevention, and the metal and chrome switch operations

Check that the detection lever is operating the switch properly depending upon the presence or absence of a hole.

Electrical System Adjustments

● Measuring instruments needed for the adjustments

- (1) Low frequency oscillator
- (2) Variable resistance attenuator
- (3) Electronic voltmeter
- (4) Oscilloscope
- (5) Frequency counter
- (6) Adjustment screwdriver
- (7) 4-sided adjustment rod for trap coil adjustments
- (8) Test tapes
(Sony TY224)
(A-BEX TCC-153, TCC-130, TCC-262B/162B)
(DENON HDX/60)
- (9) Mirror cassette for the transport (A-BEX TCC-902)

● Adjustment precautions

- (1) Before adjustments, use gauze or a swab moistened with alcohol to wipe the surface of the heads, the capstan shaft, and the pinch roller.
- (2) Demagnetize the record/playback head and the erase head with a head eraser.
- (3) Completely demagnetize the driver to be used for the adjustments.
- (4) Unless otherwise specified, set the various operation controls as indicated below.

Input control: Maximum (clockwise)

Dolby NR switch: Off

1. Tape transport check

Load the mirror cassette for the transport, and illuminate the area around the fixed guide of the record/playback head with a lamp and observe. Check that the tape edge is not hitting the tape guide portion.

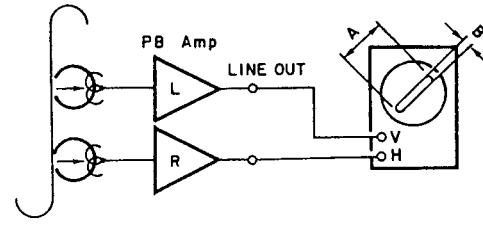

Note that the tape transport is the greatest factor affecting the performance of the cassette deck. Never move the inspection locations without good reason.

For information about replacement and adjustment of the record/playback head, see the section "Adjustment and checking of the mechanism."

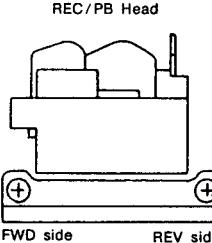

CASSETTE DECK SECTION

2. Azimuth adjustment

- 2-1 After making the tape transport check, load the test tape (A-BEX TCC-153).
- 2-2 Play back the test tape and turn the azimuth adjustment nut so that the Lissajous's figure becomes maximum at (A) and minimum at (B) for both the FWD and REV sides.

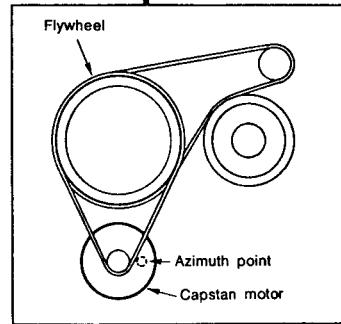

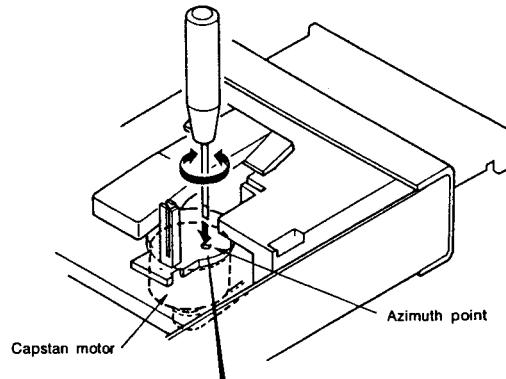

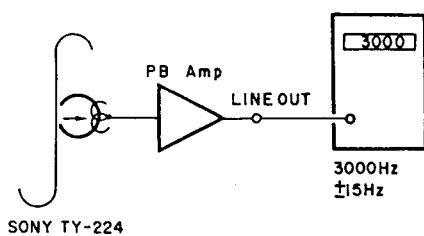

A-BEX TCC-153

3. Tape speed check and adjustment

- 3-1 Connect the frequency counter to the LINE OUT pin and load the test tape (Sony TY-224).
- 3-2 Play back the test tape at an intermediate position of the tape for both the FWD and REW sides so that the transport is stable, and adjust the adjustment screw at the top surface of the capstan motor (Exploded View number 000) so that the reading of the frequency counter is set in a range of $3000 \text{ Hz} \pm 15 \text{ Hz}$.

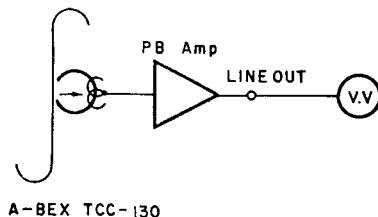

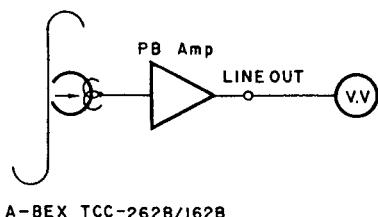

4. Adjustment of the playback system

4-1 Playback level

Play back the test tape for the Dolby standard level (A-BEX TCC-130), and adjust RT101 (left channel) and RT201 (right channel) so that the level of the LINE OUT pin becomes -2.0 dBm (620 mV). (Load resistance of 47 kohm)

4-2 Checking the playback frequency response

Play back the test tape (A-BEX TCC-262B/162B), and check that the frequency response satisfies the standard.

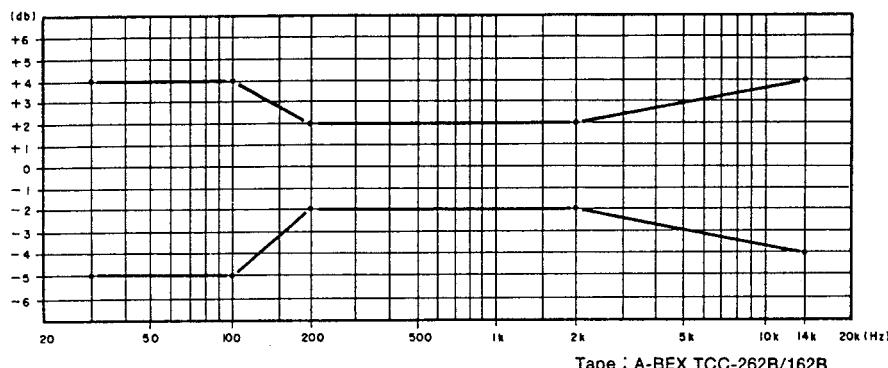

NOTE:

After making the azimuth adjustment with the 8 kHz at the start of the A-BEX TCC-262B test tape, perform check of the frequency response. Also, after the check make an azimuth adjustment again with A-BEX TCC-153, then apply screw lock.

CASSETTE DECK SECTION

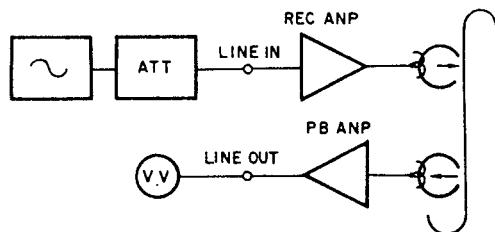

Playback Frequency Response

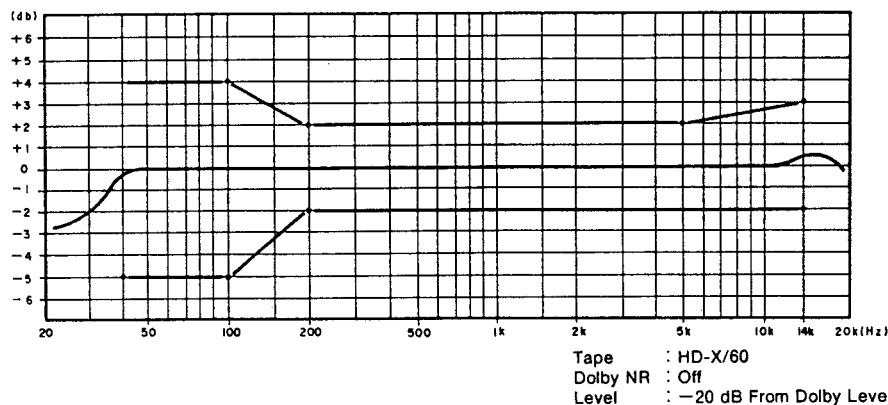

5. Adjustment of the recording system

5-1 Adjustment of the recording and playback overall frequency response

- (1) Load the DENON HDX / 60 test tape, record a signal of -20 dB 1 kHz input level, and play back.
- (2) Set the input signal to 10 kHz, record, and play back. Adjust RT103 (left channel) and RT203 (right channel) so that the response specifications of the diagram below are satisfied with respect to the 1 kHz output level.

Recording / Playback Overall Frequency Response

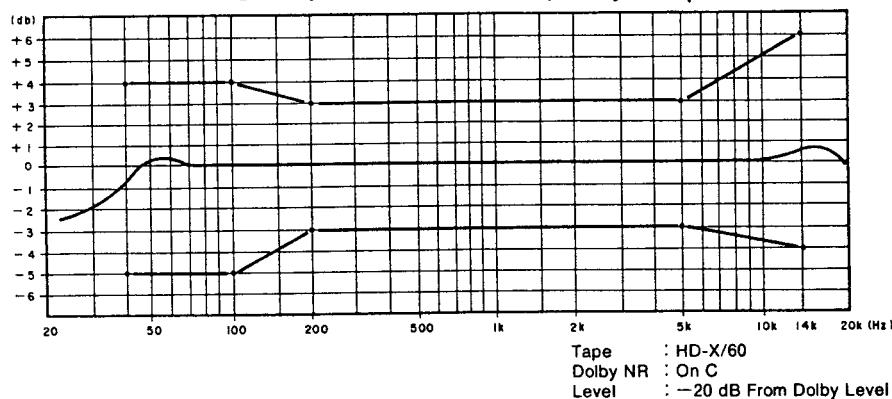

5-2 Adjustment of the recording/playback level

- (1) Load the DENON HDX / 60 test tape, record a signal of 1 kHz (-20 dB), and play back.
- (2) Adjust RT-102 (left channel) and RT-202 (right channel) so that the output of the LINE OUT pin becomes the same as the output at the time of the recording monitor.

5-3 Checking the Dolby C recording and playback overall frequency response

- (1) Set the Dolby NR switch to the "C" position.
- (2) Use the DENON HDX / 60 test tape to record and play back according to the outline of Section 5-1, then check that the response specifications have been satisfied.

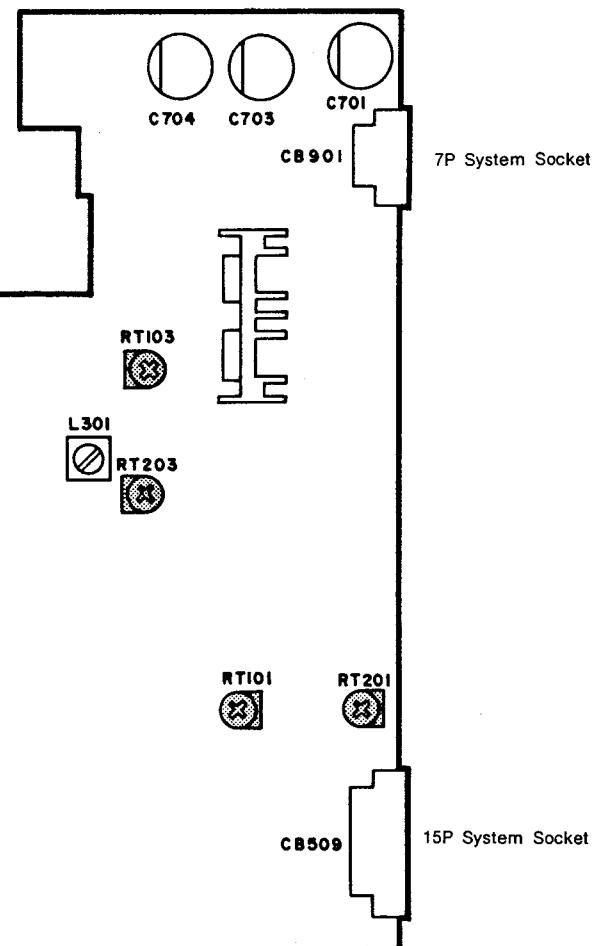

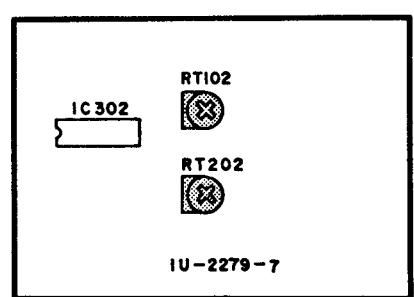

Recording / Playback Overall Frequency Response

CONTROL CIRCUIT

● Pin Description

NO	Pin name	I/O	Signal name	Function
1	D11	O	T3	Strobe signal output pin for the key and switch matrix.
2	D12	I	-	-
3	D13	O	SERIAL SIG. OUT	Serial communications output pin.
4	D14	O	REC/PB HEAD	Output pin for switching the record/playback head. "H" is output for the record head.
5	D15	O	DOLBY REC/PB	Output pin for switching the mode of the Dolby IC (CXA1330s). "H" is output at time of recording and "L" is output at time of playback.
6	R00	O	LOADING SPEED H	Output pin which sets the speed of the loading motor high. "H" sets the loading speed high.
7	R01	O	LOADING SPEED L	Output pin which sets the speed of the loading motor low. "H" sets the loading speed low.
8	R02	O	NC	-
9	R03	O	NC	-
10	D10	O	NC	-
11	R11	O	NC	-
12	R12	O	NC	-
13	R13	O	NC	-
14	R20	O	PB EQ 120μ/70μ	Output pin which switches the 120μ/70μ time constant of the playback EQ. "L" is output at 120μ (NORMAL), and "H" is output at 70μ (CHROME, METAL).
15	R21	O	NORMAL	Pin which outputs "H" at the time of normal tape. ("L" for switch input of each of chrome and metal.)
16	R22	O	METAL	Pin which outputs "H" at the time of metal tape. ("H" for switch input of each of chrome and metal.)
17	R23	O	CHIROME	Pin which outputs "H" at the time of chrome tape. ("H" for switch input of each of chrome and metal.)
18	RA0	O	TAPE PULSE IN	Input pin which takes in the reel pulse of the mechanism.
19	V	I	NC	-
20	R30	I	METAL	Input pin which takes in the metal mechanism switch. ("H" is input at the time of metal tape.)
21	R31	I	CHIROME	Input pin which takes in the chrome mechanism switch. ("H" is input at the time of metal and chrome tape.)
22	R32/INT0	I	SERIAL SIG. IN	Input pin for serial communications.
23	R33/INT1	I	-	-
24	R50	O	SOL KICK	Output pin which drives the solenoid.
25	R51	O	SOL P	Output pin used to prevent overheating of the solenoid. Output "L" during play and cue/review, and controls the maintenance of the applied voltage.
26	R52	O	CPM CONTROL	Output pin which drives the capstan motor. Outputs "H" when the capstan motor is rotating.
27	R53	O	MOTOR CONT.1	Digit output pin 1 for the control of driver IC (BA6238) which is used for loading and the reel motor.
28	R60	O	MOTOR CONT.3	Digit output pin 3 for the control of driver IC (BA6238) which is used for loading and the reel motor.
29	R61	O	PLAY SPEED	Output pin which outputs "H" at time of play, and controls the speed of the reel motor.
30	R62	O	OSC. CONTROL	Output pin used to control the bias oscillator. Outputs "H" at the time of recording.
31	R63	O	REC MUTE	Output pin which controls the muting of the recording amplifier input. Outputs "H" at times other than recording.
32	Vcc	O	Vcc	Power supply input pin.
33	R40/SCK	O	CLOCK	Clock output pin for the LCD driver IC (LC7583).
34	R41/S1	O	REC LED OUT	REC LED drive pin. "H": lit "L": off
35	R42/S0	O	DATA	Data output pin for the LCD driver IC (LC7583).
36	R43	O	CE	Chip enable output pin for the LCD driver IC (LC7583).
37	R70	O	FORWARD LED OUT	FORWARD LED drive pin. "H": lit "L": off
38	R71	O	REVERSE LED OUT	REVERSE LED drive pin. "H": lit "L": off

[] High withstand voltage terminal

CASSETTE DECK SECTION

NO	Pin name	I/O	Signal name	Function
39	R72	O	—	—
40	R73	O	—	—
41	R80	I	R2	Input take-in pin of keys and switches.
42	R81	I	R1	〃
43	R82	I	R0	〃
44	R83	O	NC	—
45	R90	I	R6	Input take-in pin of keys and switches.
46	R91		R5	Input take-in pin of keys and switches.
47	R92		R4	〃
48	R93		R3	〃
49	RESET		RESET	System reset input pin. (Active high)
50	TEST	I	TEST	Connected to Vcc.
51	OSC1	I	OSC1	Pin used for the system clock oscillation. (4 MHz)
52	OSC2	I	OSC2	〃
53	GND	I	GND	Ground
54	D 0	I	NC	—
55	D 1	O	NC	—
56	D 2	O	NC	—
57	D 3	I	MS SIG. IN	Input pin of the between-track detection signal from the between-track detection IC.
58	D 4	O	—	—
59	D 5	O	LINE MUTE	Output pin used for muting of the audio signal output. Outputs "H" at the time of PLAY, REC, REC PAUSE, and REC MUTE, and "L" at other times.
60	D 6	I	—	—
61	D 7	O	MOTOR CONT.2	Digit output pin 2 for the control of driver IC (BA6238) which is used for loading and the reel motor.
62	D 8	O	T0	Strobe signal output pin for the key and switch matrix. (Active high)
63	D 9	O	T1	〃
64	D10	O	T2	〃

● Description of key inputs

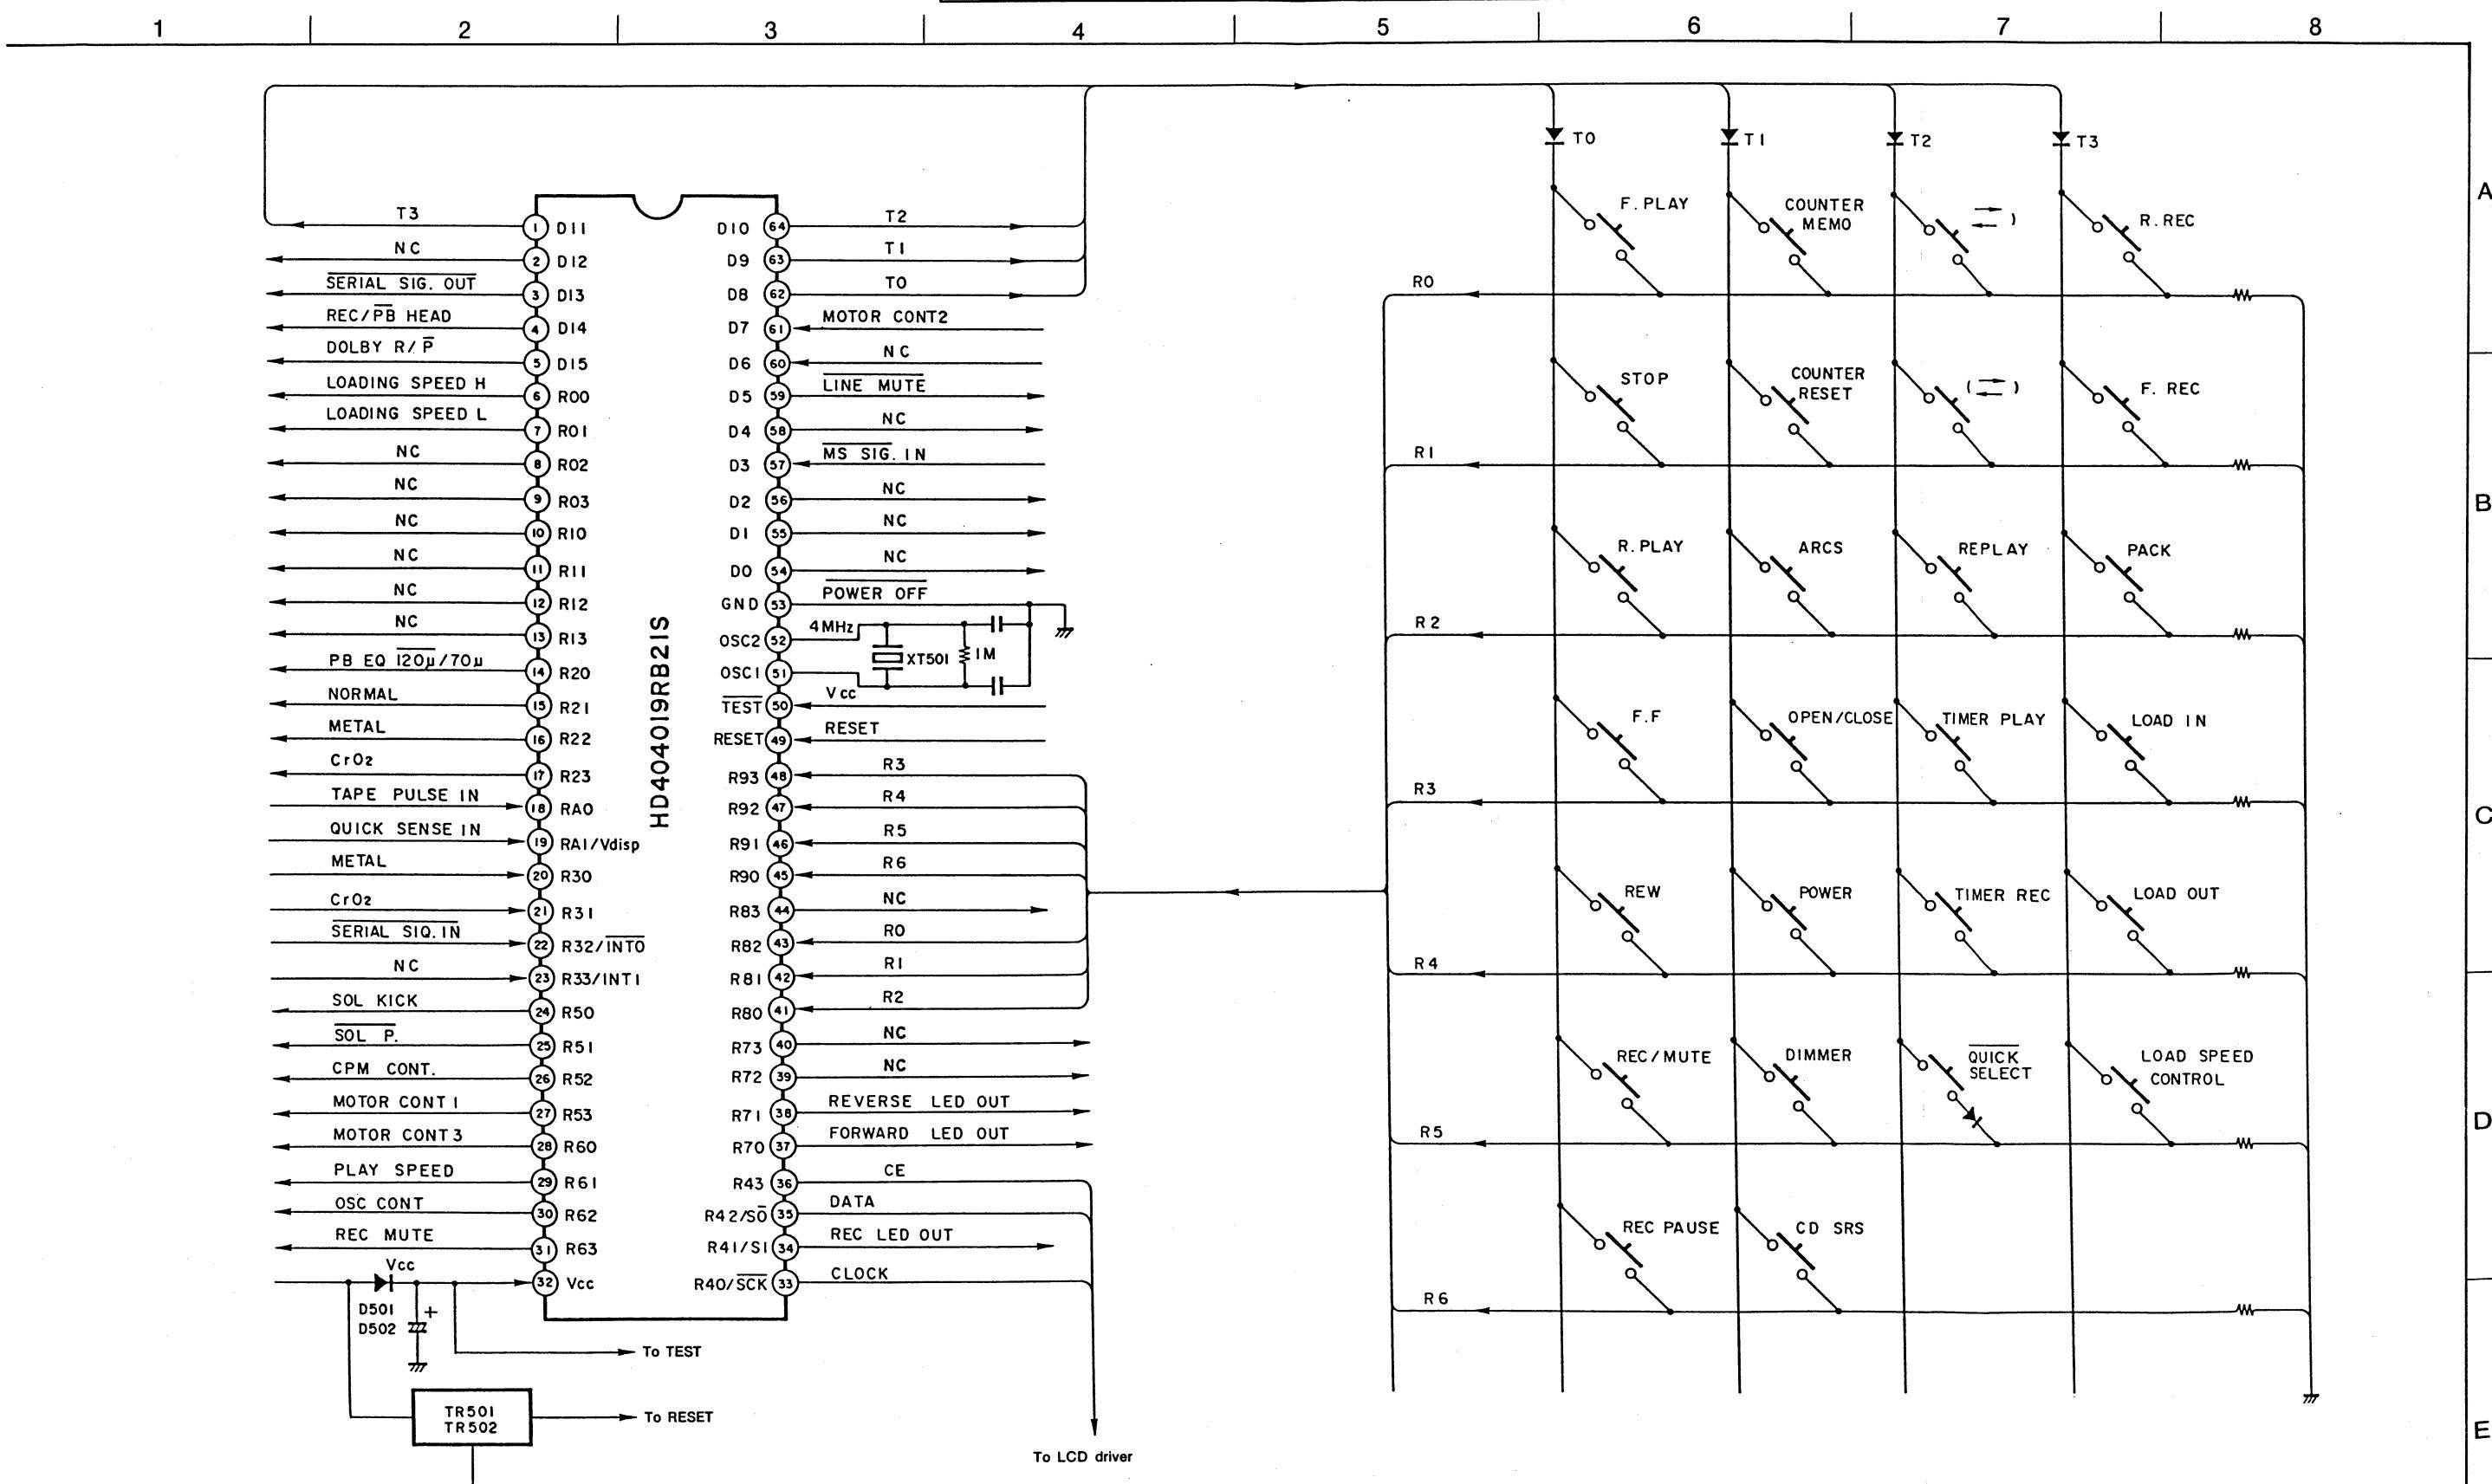

Item	Key name	Functional description
1	F. PLAY	Specifies the PLAY mode of the FORWARD direction. PLAY+REW/FF corresponding to one-touch play, or specifies the CUE/REVIEW mode with FF/REW during the PLAY mode.
2	R. PLAY	Specifies the PLAY mode of the REVERSE direction. Transition of the CUE/REVIEW mode corresponding to one-touch play is the same as F. PLAY.
3	F. F	Specifies that the tape be wound quickly to the right.
4	REW	Specifies that the tape be wound quickly to the left.
5	STOP	Specifies the STOP mode. This key input provides transition to the STOP mode regardless of the current mode.
6	REC/REC MUTE	Specifies the REC, REC PAUSE, and the REC MUTE mode. Key input in the STOP mode results in a transition to the REC PAUSE mode. Key input in the REC PAUSE mode results in a transition to the REC MUTE mode. When switched on at the same time as PLAY, or when there is PLAY key input in the REC PAUSE mode, there will be transition to the REC mode. The record conditions are to be satisfied.
7	OPEN/CLOSE	Specifies the OPEN/CLOSE mode of the cassette tray. This key input provides cyclic switching of the OPEN/CLOSE mode. Toggle operation. When there is key input while the power is off, the power will be switched on and then there will be a transition to the OPEN mode.
8	COUNTER RESET	Resets the counter to "0000".
9	CD SRS	Specifies the CD SRS operation.

● Description of switch inputs

Item	Switch name	Function description
1	(↔) : REVERSE	Specifies the both sides record/playback mode.
2	(↔) : CONTINUOUS	Specifies the continuous playback mode. When this switch is input during the REC mode, there will be a transition to the both sides recording mode.
3	F. REC	Input from this switch leads to the judgment that recording in the forward direction is possible.
4	R. REC	Input from this switch leads to the judgment that recording in the reverse direction is possible.
5	PACK	Input from this switch leads to the judgment that there is a cassette loaded.
6	LOAD IN	Input from this switch leads to the judgment that the cassette tray CLOSE operation is completed.
7	LOAD OUT	Input from this switch leads to the judgment that the cassette tray OPEN operation is completed.
8	LOAD SPEED DOWN	Input from this switch leads to the specification of LOADING SPEED DOWN for the cassette tray.

NOTES ON THE PARTS TABLE

NOTE FOR PARTS LIST

- Part indicated with the mark "◎" are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.
- Not including Carbon Film ±5%, 1/6 W, 1/4W Type in the P. W. Board parts list.
- Parts marked with this symbol △ have critical characteristics. Use ONLY replacement parts recommended by the manufacturer.
- Refer to the following table for the codes of the resistors and capacitors appearing on the parts list.

• Resistors

Ex.: RN 14K 2E 182 G FR
 Type Shape Power Resist- Allowable Others
 and per- and per- strength error

RD : Carbon	2B : 1/6W	F : ±1%	P : Pulse-resistant type
RC : Fixed	2E : 1/4W	G : ±2%	NL : Low noise type
RS : Metallic film	2H : 1/2W	J : ±5%	NB : Non-burning type
RW : Winding	3A : 1W	K : ±10%	FR : Fuse resistor
RN : Metal film	3D : 2W	M : ±20%	F : Lead wire forming
RK : Metal mixture	3F : 3W		
	3H : 5W		

* Resistance
 1 8 2 → 1800 ohm = 1.8 kohm
 Indicates number of zeros after effective number
 2-digit effective number, decimal point indicated by R.
 • Units: ohm

• Capacitors

Ex.: CE 04W 1H 2R2 M BP
 Type Shape Dielectric Capacity Allowable Others
 and per- and per- strength error

CE : Aluminum foil electrolyte	0J : 6.3V	F : ±1%	HS : High stability type
CA : Aluminum solid electrolyte	1A : 10V	G : ±2%	BP : Non-polar type
CS : Tantalum electrolyte	1C : 16V	J : ±5%	HR : Ripple-resistant type
CO : Film	1E : 25V	K : ±10%	DL : For charge and discharge
CK : Ceramic	1V : 35V	M : ±20%	HF : For assuring high frequency
CC : Ceramic	1H : 50V	Z : +80%	U : UL part
CP : Oil	2A : 100V	-20%	C : CSA part
CM : Mica	2B : 125V	P : +100%	W : UL-CSA type
CF : Metallized	2C : 160V	-0%	F : Lead wire forming
CH : Metallized	2D : 200V	C : ±0.25pF	
	2E : 250V	D : ±0.5pF	
	2H : 500V	E : -	
	2J : 630V	F : Others	

* Capacity
 2 R 2 → 2.2 μF
 1-digit effective number, decimal point indicated by R.
 2-digit effective number, decimal point indicated by R.
 • Units: μF, (for P, pF (μμF))
 • When the dielectric strength is indicated in AC, "AC" is included after the dielectric strength value.

NOTE FOR PARTS LIST

- Part indicated with the mark "●" are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.

WARNING:

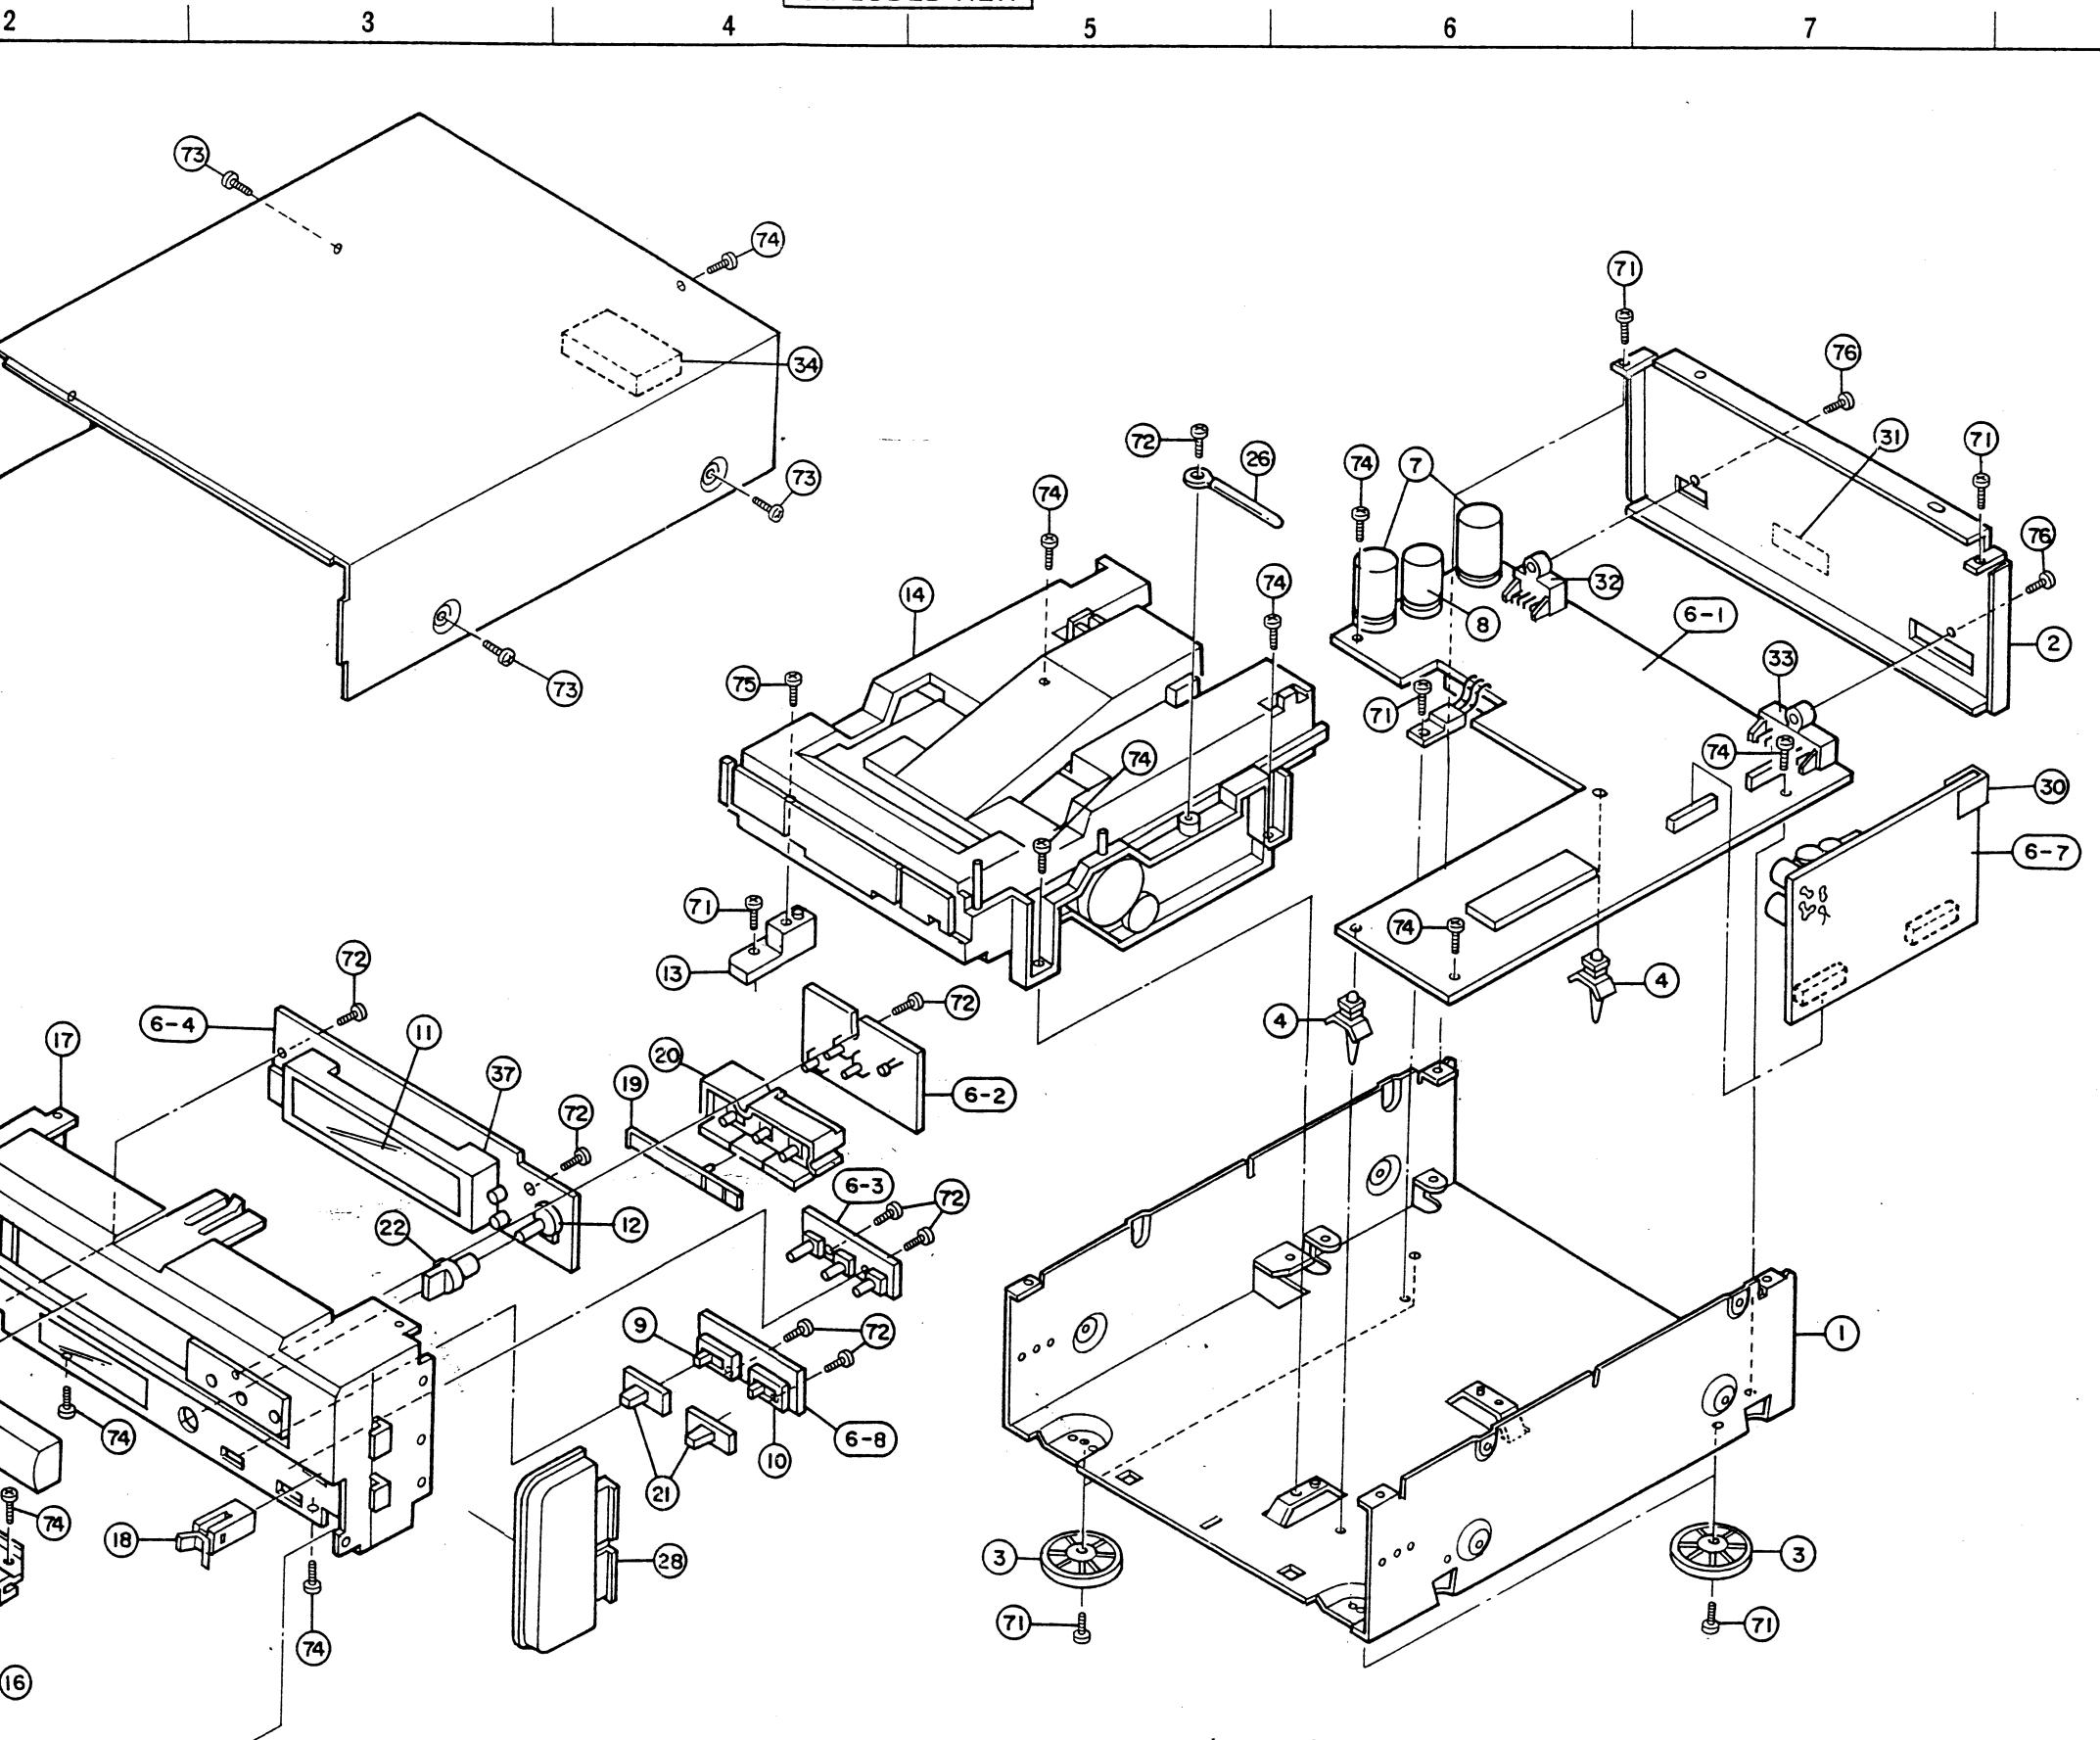

Parts marked with this symbol have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.

CD SECTION

PART NAMES AND FUNCTIONS

CD PLAYER

- 1 Disc tray**
The disc tray opens forward when the OPEN/CLOSE button ⑥ is pressed.
To close the disc tray, press the OPEN/CLOSE button ⑥ again.
- 2 II PAUSE button**
Press this button to stop playback temporarily.
Press the PLAY button to resume playback.
- 3 ■ STOP button**
Press this button to stop playback.
- 4 ▶ PLAY button**
Press this button to start playing the disc.
If pressed when the disc holder is open, the disc holder closes and playback begins.
- 5 Play indicator**
This lights when the disc is played and sound is output.
- 6 OPEN/CLOSE button**
Press this button to open and close the disc holder.
Press once to open the disc holder forward, then press again to close the disc holder.
- 7 ↳ (automatic/manual search reverse button)**
Press this button to move the pickup back to the beginning of the desired track.
Press in the play or pause mode to move back a number of tracks equal to the number of times the button is pressed.
- 8 ▷ (automatic/manual search forward button)**
Press this button to move the pickup forward to the beginning of the desired track.
Press in the play or pause mode to move forward a number of tracks equal to the number of times the button is pressed.
* The automatic search function is set if the button is released within 0.5 seconds, and the manual search function is set if the button is held in for more than 0.5 seconds.
- 9 REPEAT button**
Press this button for repeat playback.
- 10 EDIT button**
Press this button for edited recording (dividing the tracks to be recorded to fit onto sides A and B of a tape according to the tape's length).
- 11 TAPE A/B button**
Press this button during editing to switch the display between the display for side A and the display for side B of the tape.

CD PLAYER DISPLAY

Tape type and remaining time display
During the editing function, c-00 lights and the tape time is displayed.

▶ PLAY lights when the disc is playing, and II PAUSE lights when in the pause mode.

During editing, EDIT, A, and TAPE light, the remaining time for side A is displayed on the time display, the numbers of the tracks set for side A light on the calendar display, while the numbers of the tracks set for side B flash. When the TAPE A/B button is pressed, A turns off, B lights, and the remaining time and numbers of the tracks set for side B are displayed in the same way as for side A.

PROGRAM lights during the programmed search mode.

Track number display
00 is displayed when the disc data cannot be read properly.
When a disc is loaded:
• The total number of tracks is displayed in the stop mode.
• The track number is displayed in the play and program modes.
• [I or II] is displayed when the innermost or outermost section of the disc is reached in the manual search mode.

Time display
0000 is displayed when the disc data cannot be read properly.
When a disc is loaded:
• The elapsed playing time is displayed in the stop mode.
• The elapsed time for the track currently playing is displayed in the play and pause modes.
• The elapsed time for the programmed tracks is displayed in the program mode.

The indicators switch as follows when the REPEAT button is pressed in the play mode:
First press : REPEAT
Second press : REPEAT A
Third press : REPEAT A - B
Fourth press : Off

These indicate the time display mode.
TOTAL lights when the remaining time for all tracks is displayed.
SINGLE lights when the remaining time per track is displayed.

"Music calendar" display
This indicates the numbers of the tracks on the disc, up to a maximum of 20. The track numbers turn off after the corresponding tracks are played. In the program mode, the numbers of the programmed tracks are displayed, up to a maximum of 20.
All indicators, 1 to 20, light when the disc data cannot be read properly.

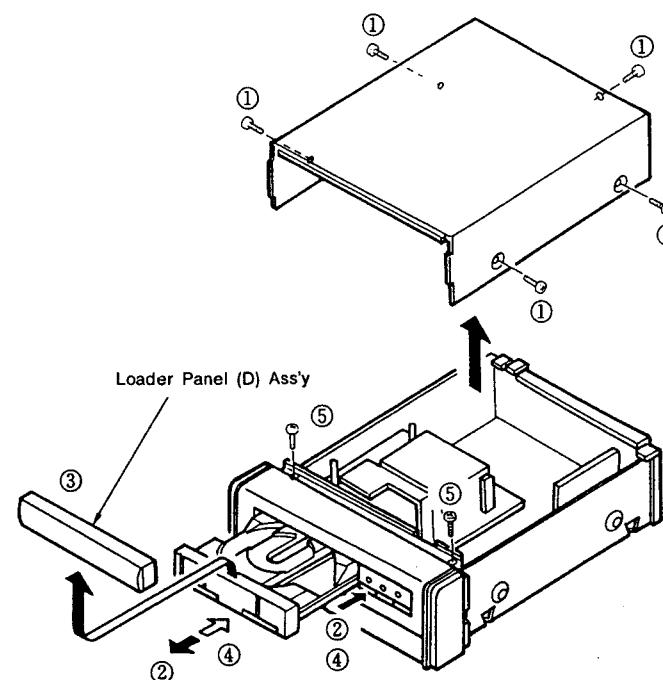

* NO DISC lights on the display if no disc is loaded, or if the disc is loaded upside-down or is heavily scratched or dirty.

REMOVAL OF EACH SECTION

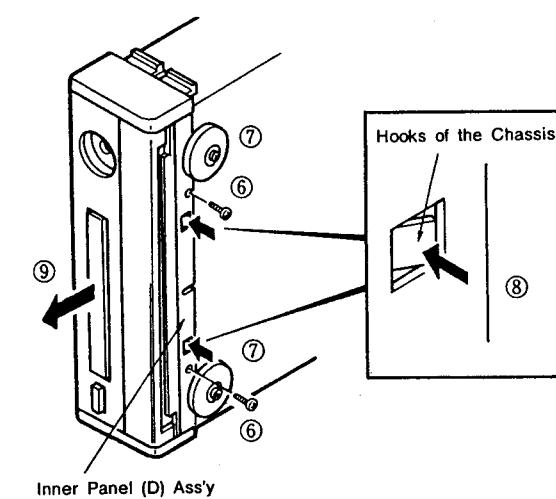

(Follow this procedure in the reverse order when assembling.)

1. Removal of the top cover

- ① Remove the 5 screws which fasten the top cover.
- ② Press the ▲ OPEN/CLOSE button and eject the CD tray.
- ③ Remove the loader panel (D) assembly in the direction of the arrow.
- ④ Press the ▲ OPEN/CLOSE button and retract the CD tray.
- ⑤ Remove the 2 screws which fasten the front panel assembly. At this time, remove with care the connector which connects the main unit assembly and the front panel side assembly.

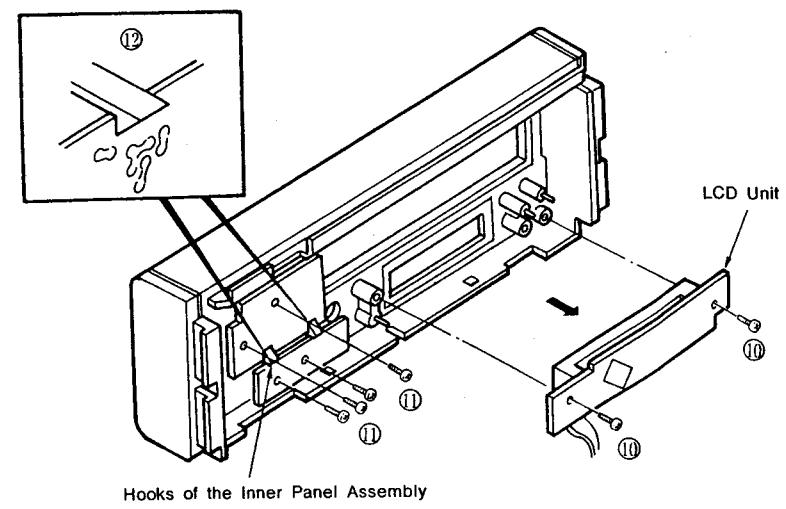

- ⑥ Stand the main unit as illustrated in the diagram and remove the 2 screws which fasten the inner panel assembly.
- ⑦ Slightly loosen the screws of the 2 front legs.
- ⑧ Remove the hooks of the chassis from the inner panel assembly.
- ⑨ Remove the front panel assembly in the direction of the arrow.

2. Removal of the printed wiring board assembly

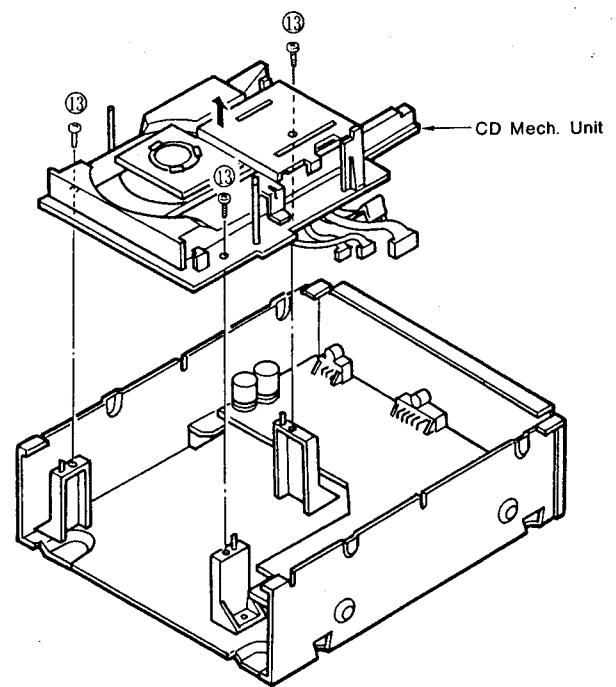

LCD UNIT (1U-2280-2)

- ⑩ Remove the 2 screws which fasten the LCD unit.
- ⑪ Remove the 4 screws which fasten the various boards.
- ⑫ Remove the hooks of the inner panel assembly.

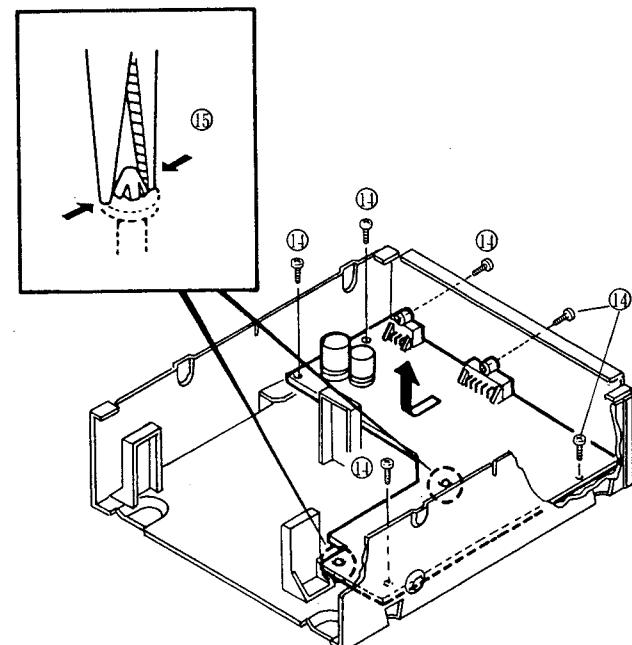

3. Removal of the CD mechanism unit

- ⑬ Remove the 3 screws which fasten the CD mechanism unit. At this time, remove with care the connector which connects the CD mechanism unit and the main unit assembly.

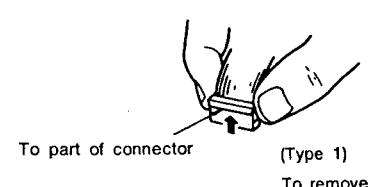

MAIN UNIT ASSEMBLY (1U-2280-1)

- ⑭ Remove the 6 screws which fastens the main unit assembly.
- ⑮ Use radio pliers or another suitable tool to remove the 2 PCB holders which fasten the main unit assembly.

※ Removing connectors (Type 1)

- Hold the top part of the connector, release the lock, and pull out the wires.
- When the lock of the top has not come off, the wires will not come out, so check that the lock has come off.

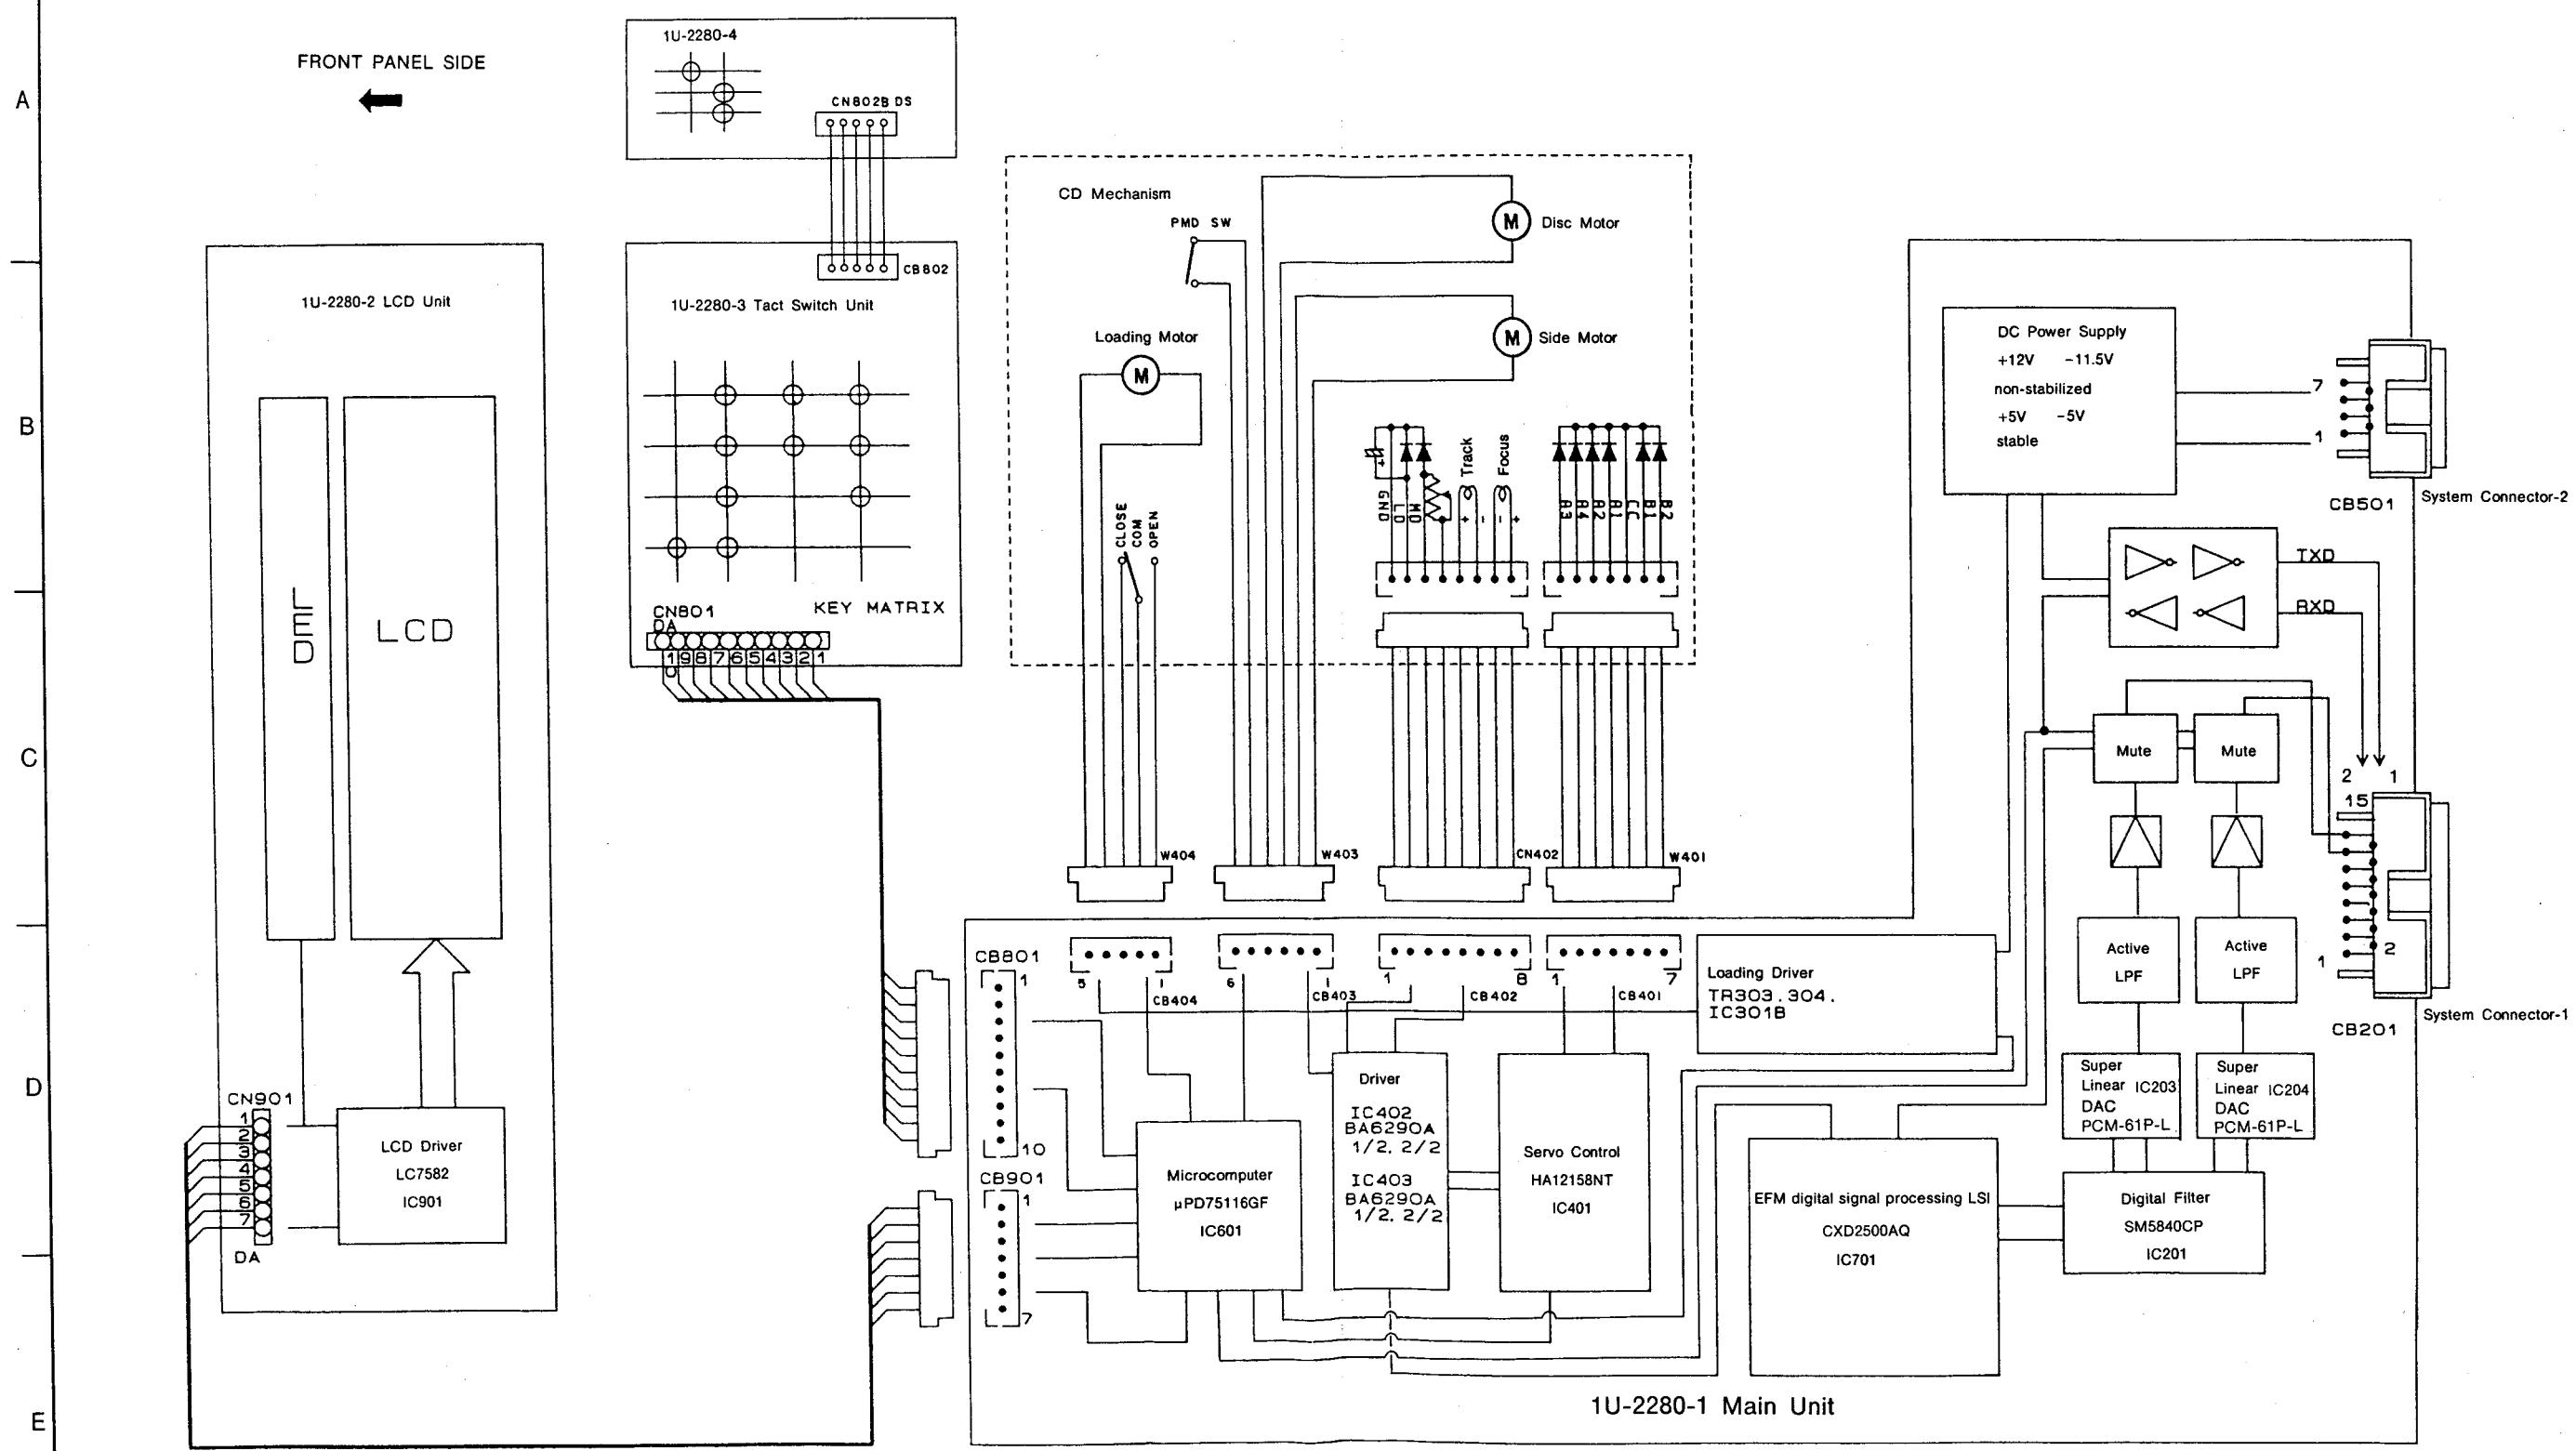

※ Connecting the connectors (Type 1)

- Press the top of the connector and lock it to the base, fix the bend of the wires, match the polarities, and press in. When the top section is not locked, the wires will come out, so check that the top section is locked.

Basic Laser Drive Circuit Diagram

Measuring Circuit Diagram

CD SECTION

● Precautions in Use

Read the following carefully before handling.

1. Laser control circuit

The light output of the laser diode (LD) is greatly affected by temperature, so a built-in monitor photodiode should be used in the LD to supplement the light output.

In order to get rid of the dispersion of the monitor photodiode, the semiconductor resistor accompanying the pickup has been adjusted so that the mirror surface level of the HF signal becomes 250 mV when the measurement circuit of this manual and the basic laser drive circuit are used. When designing a new laser drive circuit, note that the life of the laser will be shortened when the mirror level of the HF signal becomes 275 mV with this measuring circuit.

2. Wiring

Be sure to use the specified connectors for the wiring.

Note that the eye pattern may deteriorate when there is a microprocessor or other digital noise source in the vicinity from the photodiode to the harness.

Note that a poor connection related to the LD and actuator connector will cause deterioration of the laser, and so there should not be any looseness of connectors.

● Precautions in Handling

This mechanism has been precisely assembled and adjusted at a special factory. It should not be disassembled or adjusted without good reason. Pay attention to the following points related to handling.

1. General items

(1) Storage

Avoid storage in places with high temperatures and high humidity, and in places exposed to a lot of dust.

(2) Handling

The unit has been precisely adjusted and care should be taken so as not to expose the unit to shocks through dropping or careless handling.

2. Semiconductor laser (LD)

(1) Protection of the eyes from the laser

The output of the LD is via an objective lens and is a maximum of 400 μ W, but reaches approximately 1.3×10^4 W/cm² in places where there is condensed light. After being condensed by the objective lens, the beam widens and so is all right at a distance of 30 cm or further, but during operation the LD should never be allowed to be viewed directly or through another lens or mirror since this is dangerous.

(2) Destruction by surge currents or static electricity

When a large current flows through the LD, even for a very short period, the strong light which the LD generates itself will advance the deterioration of the LD or destroy it.

Wire a switch into the LD drive circuit or provide another method of preventing the flow of surge currents. Also, when handled without care, the LD can be destroyed instantly by the application of static electricity from the body. Therefore, when handling the LD, be sure to ground your body and ground the measuring instruments, jigs, and tools. It is also desirable to use a grounding mat on the work bench and floor.

3. Lens actuator

(1) The actuator section uses a strong magnetic circuit, so that when magnetic bodies come too close, their characteristics are altered. Also be careful not to allow foreign matter to enter from the cover gap.

(2) Lens cleaning

Dust or dirt adhering to the objective lens will change the performance.

To clean, blow the dirt away with clean air from an air blower.

4. Handling

Be sure not to contact the lens when handling the LD.

Note that direct contact of the body or other objects with the circuit of the LD board will cause deterioration to occur, so sufficient care should be taken.

SERVICE POINTS

1. Parts replacement of the tray mechanism (Figs. 1 and 2)

(1) Removal of the tray

Open the tray and use a flat-bladed screwdriver to press the stopper portions of Fig. 1 (one each in the left and right locations) in the direction of the black arrow, then remove in the direction of the white arrow.

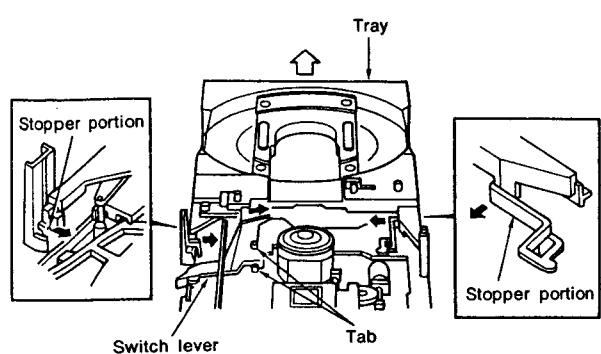

Fig. 1

(2) Mounting of the tray (Figs. 1, 2, and 3)

Rotate the switch lever in the direction of the arrow, set the latches of the tray as illustrated in Fig. 2, then align the rails of the tray in the grooves of the loading plate, and insert so that the pinch lever pins of the switch lever enter into the rack grooves. Push in the tray while pressing the stopper portion inside a little.

(Check that the latches are in the positions illustrated in Fig. 2.)

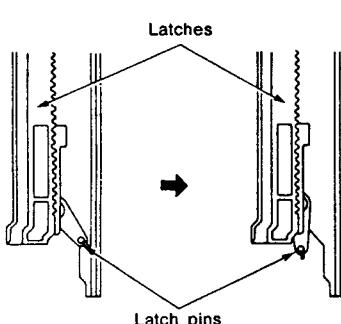

Fig. 2

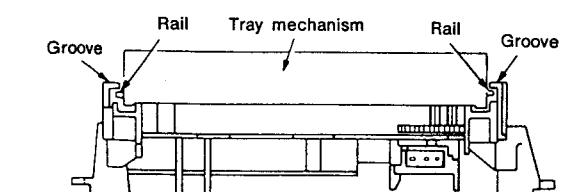

Fig. 3

(3) Replacement of the disc holder (Fig. 4)

With the tray removed, remove tabs ① and ② of the disc receptacle of Fig. 4, then lift up and off.

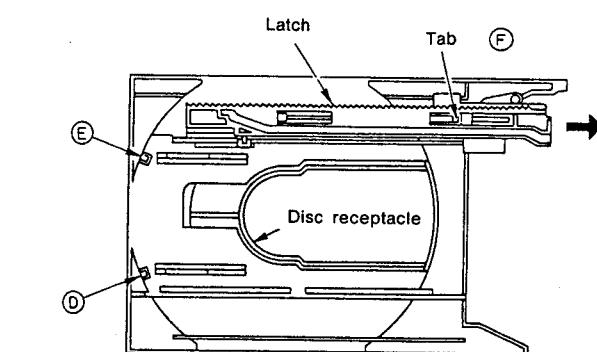

Fig. 4

(4) Replacement of the latches (Fig. 4)

Set the latches into the condition of Fig. 4, lift the latch tab (F) up about 1 mm with a flat-bladed screwdriver and remove the rack in the direction of the arrow.

(5) Removal of the loading motor and switches (Fig. 5)

Remove the belt from the loading motor, then remove the 3 tabs. Remove the fixed tabs from the various switches.

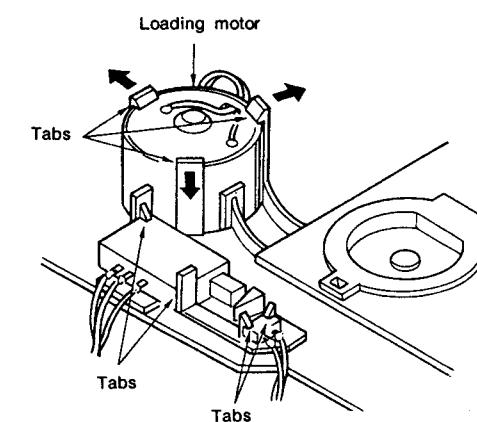

Fig. 5

(6) Replacement of the belt

Replace the belt with the tray removed.

(7) Replacement of the clamper (Fig. 6)

Hook the elongated holes of the clamper onto the C arm, bend the elongated hole sections and attach.

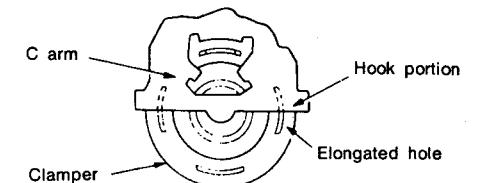

Fig. 6

(8) Replacement of the switch lever (Fig. 1)

Remove the tabs of the bottom side (in 2 locations).

2. Removal of the unit mechanism (Fig. 7)

After removing the loading mechanism, remove the tab of the bottom surface (in one location) as illustrated in Fig. 7.

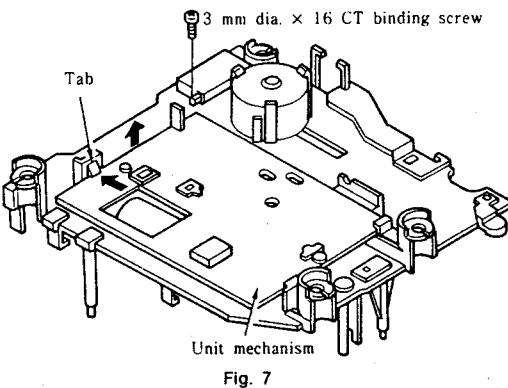

Fig. 7

(1) To replace the DC motor (D2) and the turntable, follow the procedure below

- 1) Pull the turntable (plastic) off vertically from the unit plate.
 - 2) When fitting on the servicing turntable (metal), make a height adjustment. (Fig. 8)
- Do not exert excessive force to the shaft of the DC motor (D2) at this time.

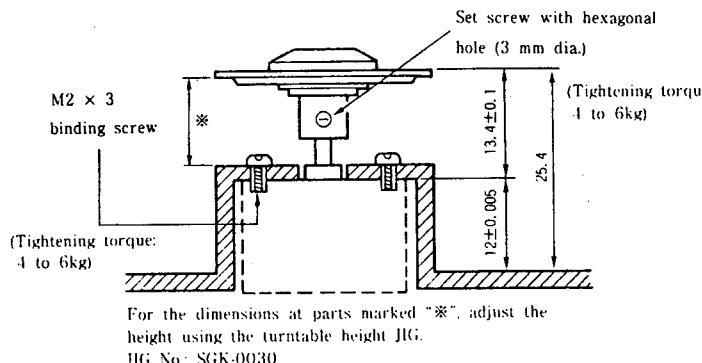

Fig. 8

- 3) At the time of service replacement of the DC motor (D2), do not apply excessive force in direction B. When part C of the unit plate is misshapen, it will cause eye pattern deterioration. (Fig. 9)

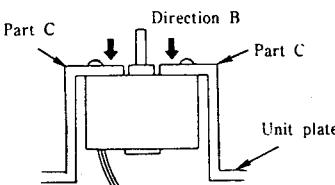

Fig. 9

NOTE:

- Motor replacement or turntable replacement method
Remove the pressure-fitted turntable, and remove the motor screws.
- Do not reuse a turntable (plastic) that has been removed once.

(2) When disassembling and assembling the unit mechanism, assemble with wiring resembling that of Fig. 10

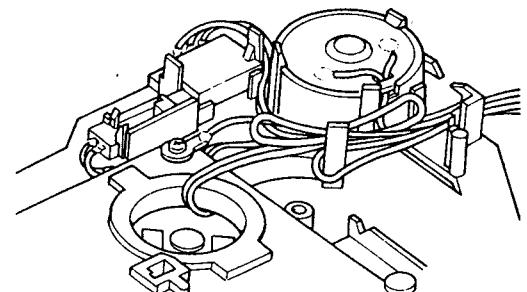

Fig. 10

3. Inspection of the objective lens (Fig. 11)

Handle so as not to get dirt or dust on the objective lens of the lens actuator section. Note that when used for a long period, dirt or dust may have adhered to the objective lens. Try cleaning the surface of the objective lens with a dry, clean cotton swab. If the dirt still does not come off, moisten the cotton swab with a small amount of water and wipe. When doing this, be careful not to get water on any parts other than the lens.

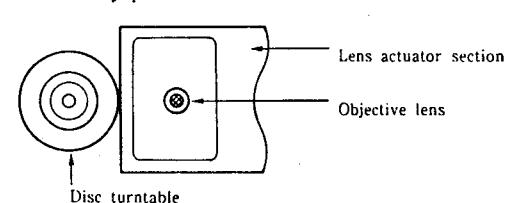

Fig. 11

4. Inspection for laser breakdown

The laser is normally driven with a current of 30 to 80 mA. If this laser drive current value is measured at 120 mA or higher in the circuit, the laser may be thought to be faulty. (The current value is measured by taking the voltage (0.99 to 3.3 V) across both ends of R401, which is 33 ohms).

5. Precautions at time of servicing (Fig. 12)

(1) Semiconductor laser

The semiconductor laser is very susceptible to static electricity destruction and surge currents. Be careful never to touch the terminals of the semiconductor laser and the terminals of the flexible board with your hands or a tool.

As illustrated in Fig. 12, the current and light intensity characteristics increase abruptly once the threshold current value is exceeded.

Also note that this threshold current differs a little from laser to laser. In view of this, when replacing the unit mechanism or any work that involves setting the amount of light of the laser, be sure to turn the adjustment control VR401 fully in the counterclockwise direction, and then raise it to the specified value.

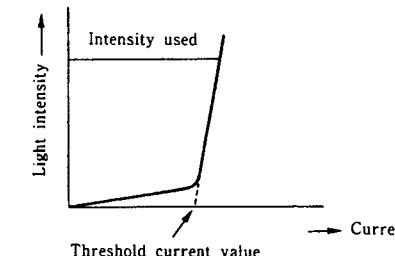

Fig. 12

(2) Handling the unit mechanism (Fig. 13)

When handling the pickup mechanism and the unit mechanism, use a ground ring such as the one illustrated in Fig. 13. (A ground ring can be constructed using ordinary lead wire.)

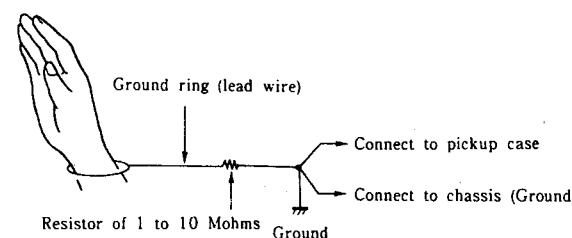

Fig. 13

6. Inspection of the actuator (Fig. 14)

Check the resistance value of the actuator coil. It is normal if the values are as follows:

Focusing coil 30 ohms

Tracking coil 10 ohms

If the coils are open or shorted, the actuator may be thought to be broken. Also, a 1.5 V battery can be used to observe if the lens moves.

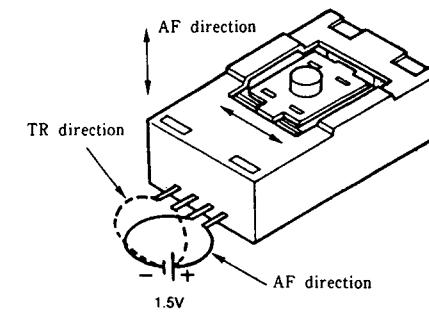

Fig. 14

CD SECTION

ADJUSTMENT METHOD

The microprocessor contained in this unit incorporates a service program which allows a wide variety of service adjustments to be conducted easily by using the operation buttons.

1. Method of starting the service program

NOTE: When the service program starts, normal operations are not longer possible with the operation buttons.

2. Operation functions when the service program is operating

Operation button	Operation function	Description
▲ OPEN/CLOSE	Opens and closes the disc holder.	<ul style="list-style-type: none"> Opening and closing takes place when the rotation of the disc has stopped. Other operation buttons are performed when the opening and closing operation is completed.
■ STOP	Stops system operation.	<ul style="list-style-type: none"> Track number display becomes <i>D 1</i>. Press when an adjustment has been completed or is redone.
▶ PLAY	Operates the focus servo and rotates the disc.	<ul style="list-style-type: none"> Press at the time of the tracking offset adjustment. After the operation is completed, the track number display becomes <i>D 2</i>.
⏸ PAUSE	Operates the focus servo, tracking servo, slide servo, and the spindle servo.	<ul style="list-style-type: none"> When the play button has been pressed, the tracking servo and slide servo are operated. After the operation is completed the track number display becomes <i>D 3</i>.
Other buttons	Operation is not normal.	<ul style="list-style-type: none"> Do not operate buttons other than the above. When a button is operated by mistake, immediately turn the power switch off.

NOTE: Do not use the remote control while the service program is operating.

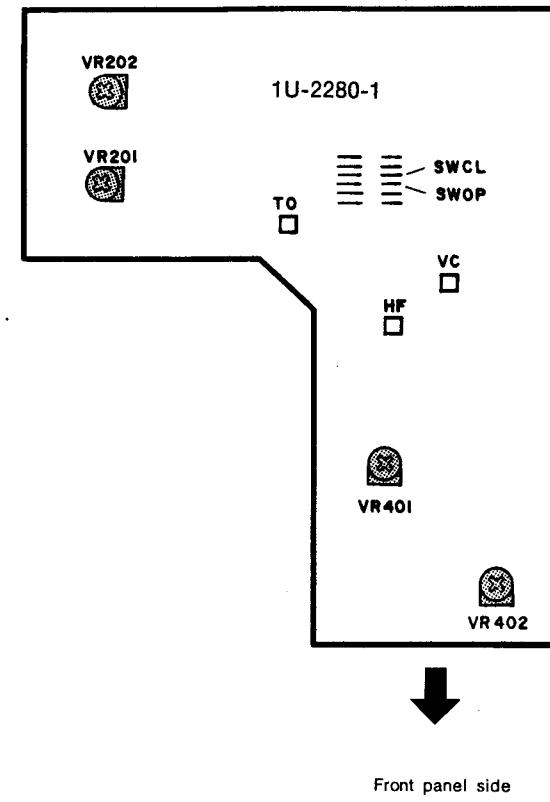

3. Adjustment method

(1) Measuring instruments required in the adjustment

- ① DC voltmeter
- ② Oscilloscope

Outline Diagram of Adjustment Locations

1U-2280A-1 CD Unit (Component Side)

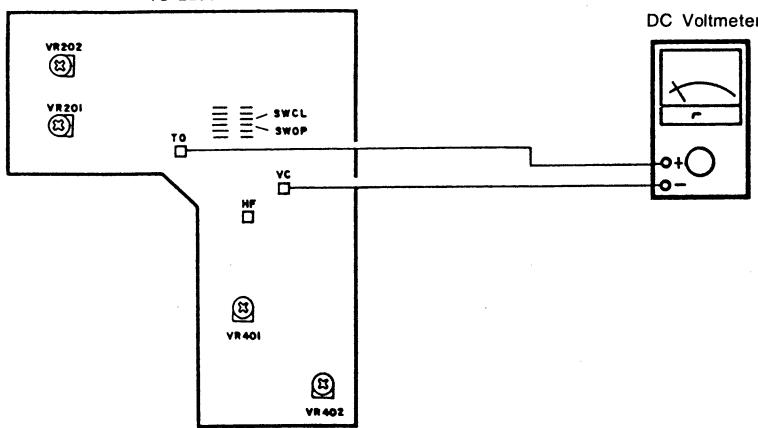

NOTE: VR201 and 202 are adjusted at the factory before shipping and there is no need to adjust.

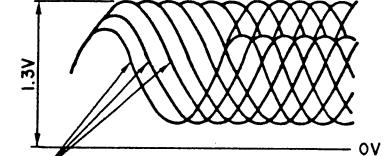

(2) Adjustment preparation

1.	Set the adjustment control (VR401, 402) to the position illustrated.	VR401 (T-OFFSET) VR402 (F-OFFSET)
2.	Adjustment step	1. Tracking offset 2. Focus offset

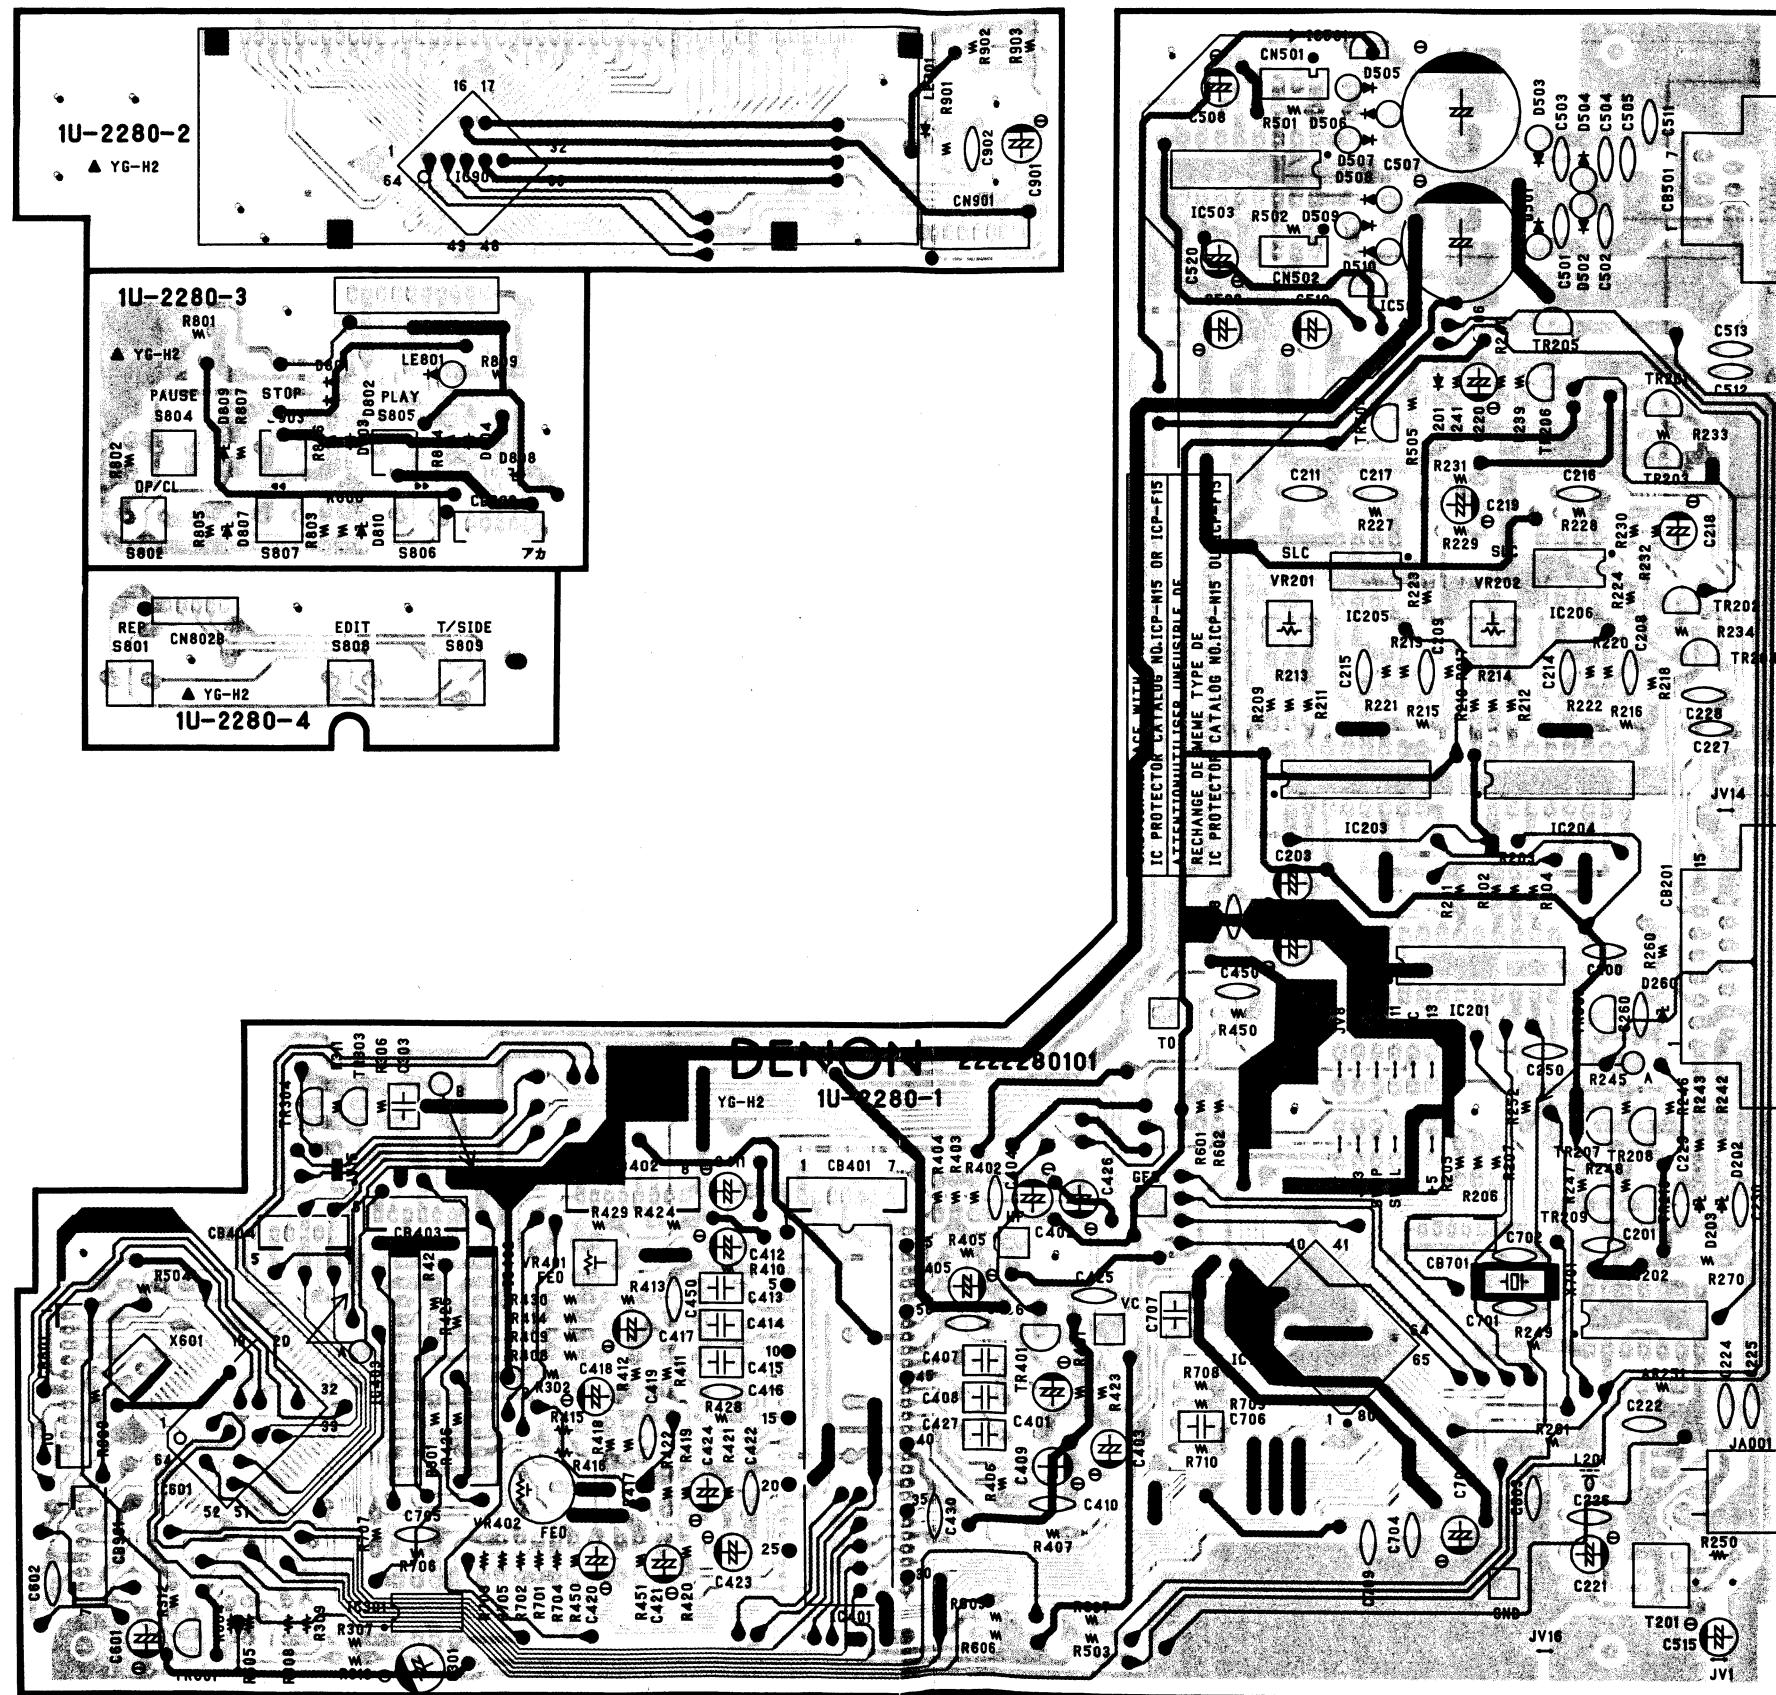

(3) Tracking offset adjustment

Wiring Diagram	
	
Adjustment location	Adjustmnet Procedure
(Control) VR401	1. Adjust the VR401 "T-OFFSET" control and set the $0mV \pm 5mV$.

(4) Focus offset Adjustment

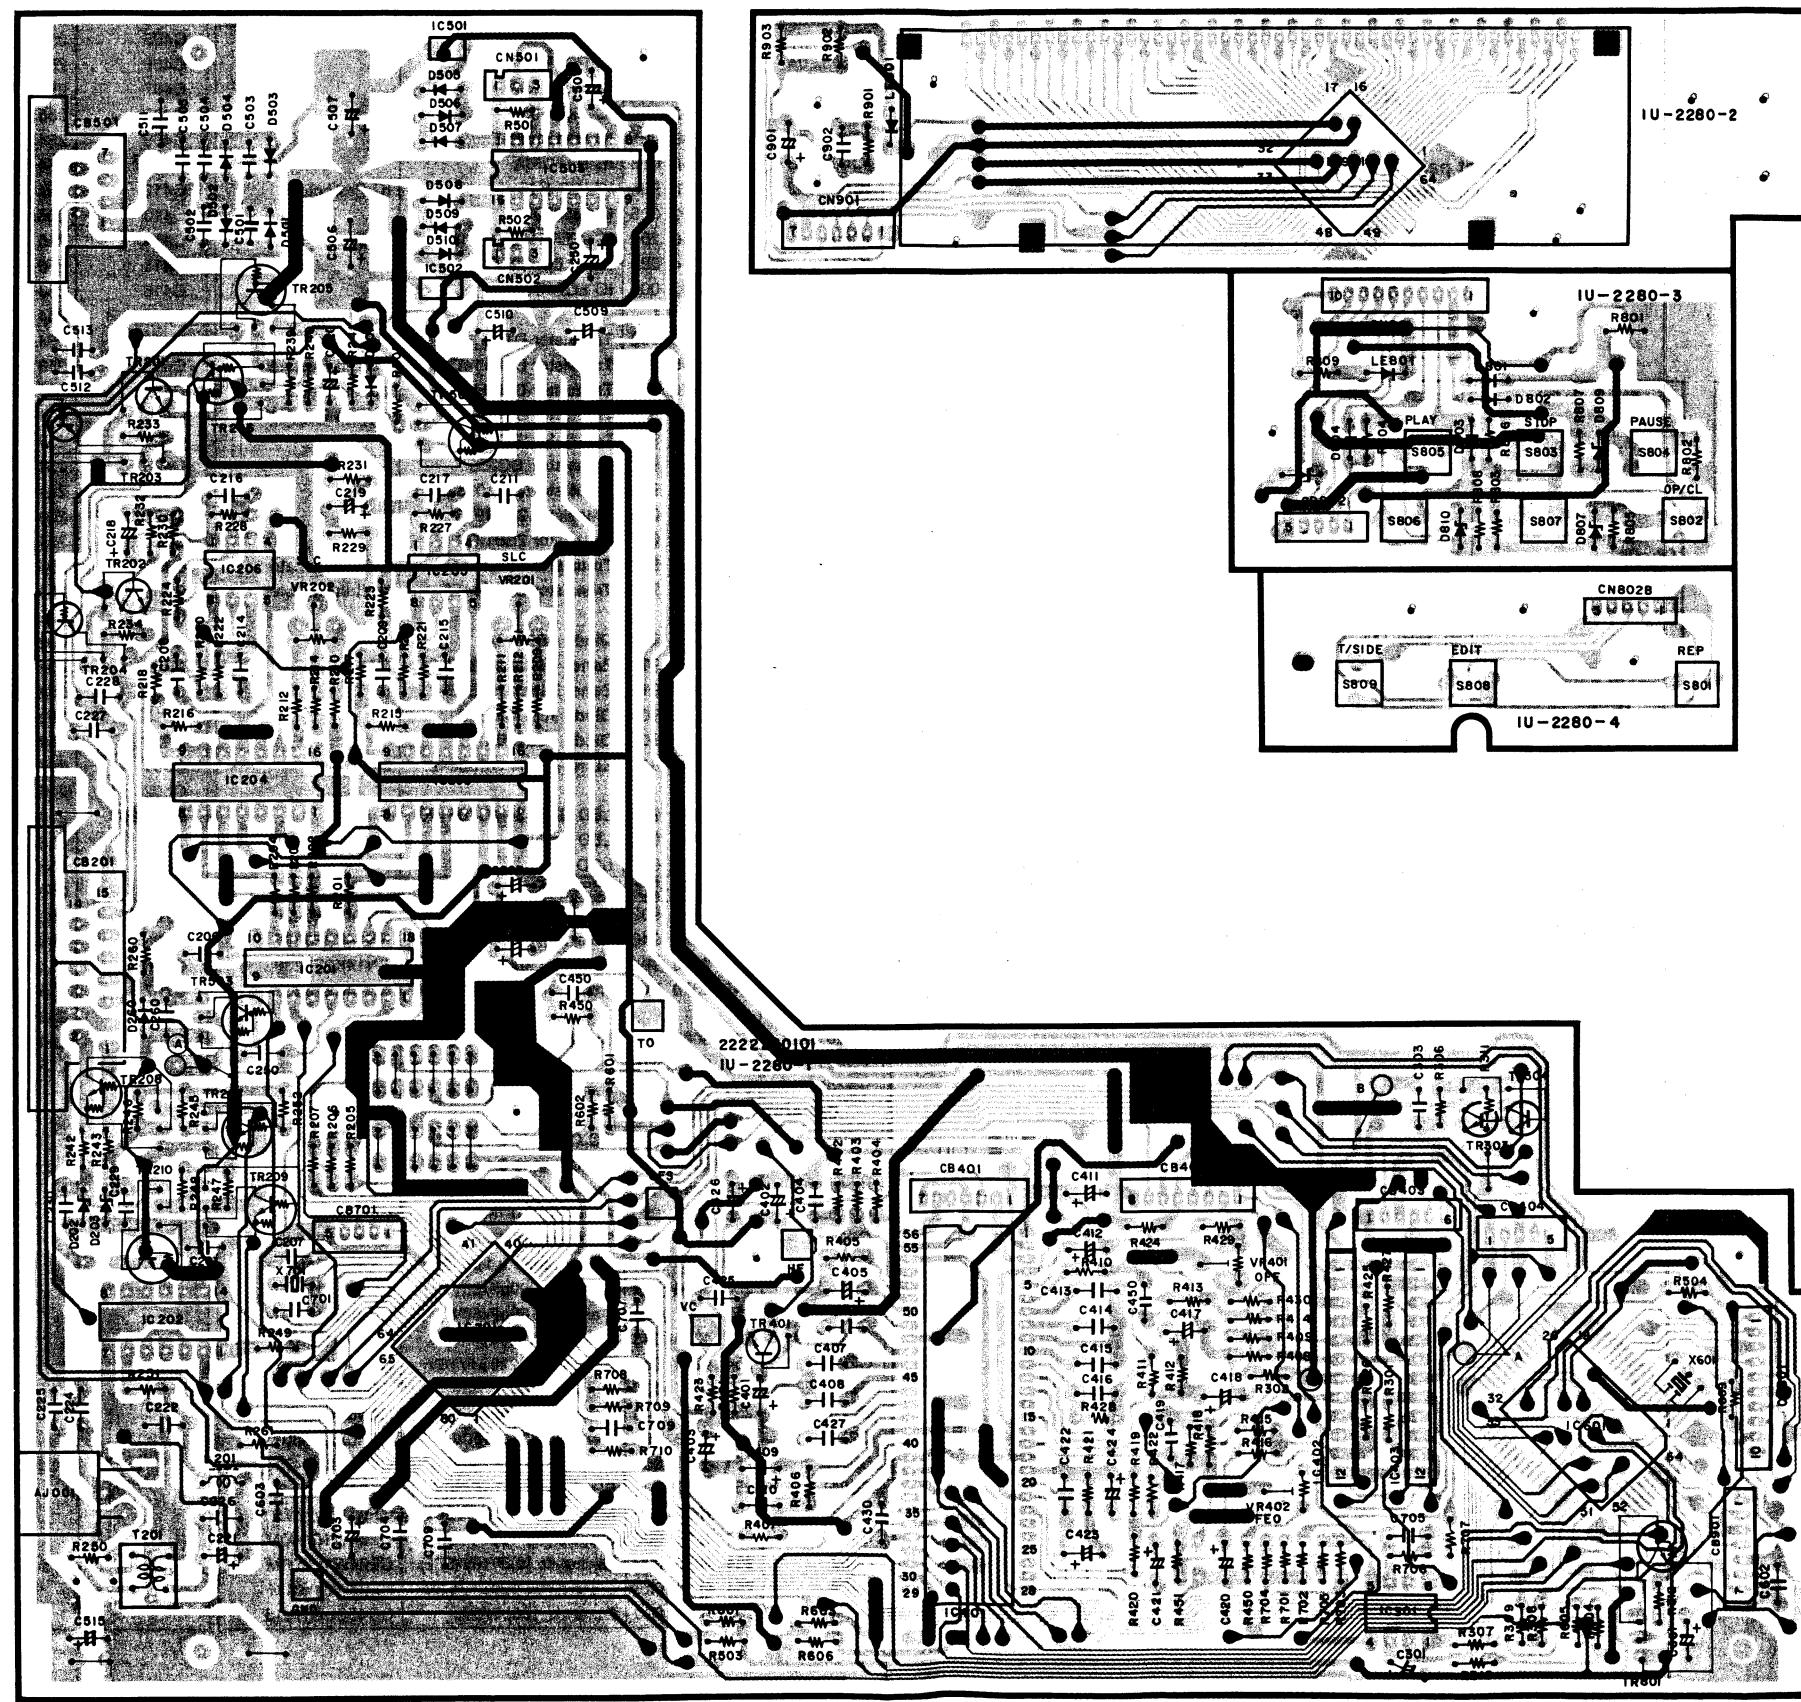

Wiring diagram			
Oscilloscope	Adjustment location	Check items	
V	H	Control	Oscilloscope
50mV/div or 20mV/div	0.2 μ /div or 0.5 μ /div	VR402	 EFM waveform Adjust for Fine waveform
Adjustment Procedure			
1. Press the  PLAY button. 2. Adjust VR402 ("F-OFFSET") so that the eye pattern jitter is minimum.

NOTES ON THE PARTS TABLE

NOTE FOR PARTS LIST

- Part indicated with the mark "◎" are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.
- Not including Carbon Film ±5%, 1/6 W, 1/4W Type in the P. W. Board parts list.
- Parts marked with this symbol have critical characteristics. Use ONLY replacement parts recommended by the manufacturer.
- Refer to the following table for the codes of the resistors and capacitors appearing on the parts list.

• Resistors

Ex.: RN 14K 2E 182 G FR
 Type Shape Power Resistance Allowable Others
RD : Carbon 2B : 1/8W F : ±1% P : Pulse-resistant type
RC : Fixed 2E : 1/8W G : ±2%
RS : Metallic film 2H : 1/2W J : ±5%
RW : Winding 3A : 1W K : ±10%
RN : Metal film 3D : 2W M : ±20%
RK : Metal mixture 3F : 3W F : Lead wire forming
3H : 5W

Type	Shape and performance	Power	Resistance	Allowable error	Others
RD : Carbon	2B : 1/8W	F : ±1%	P : Pulse-resistant type		
RC : Fixed	2E : 1/8W	G : ±2%			
RS : Metallic film	2H : 1/2W	J : ±5%	NL : Low noise type		
RW : Winding	3A : 1W	K : ±10%	NB : Non-burning type		
RN : Metal film	3D : 2W	M : ±20%	FR : Fuse resistor		
RK : Metal mixture	3F : 3W		F : Lead wire forming		
	3H : 5W				

* Resistance
1 8 2 ⇒ 1800 ohm = 1.8 kohm
 1-digit effective number, decimal point indicated by R.
 2-digit effective number, decimal point indicated by R.

3	MON	O	1,0 On-off control output of the spindle motor.
4	MDP	O	1,Z,0 Servo control of the spindle motor.
5	MDS	O	1,Z,0 Servo control of the spindle motor.
6	LOCK	O	1,0 Samples GFS at 460 Hz. When GFS is "H", H is output. L is output when there is "L", 8 times in succession.
7	NC	—	
8	VCOO	O	1,0 Oscillation circuit output for analog EFM PLL.
9	VCOI	I	Oscillation circuit output for analog EFM PLL. fLOCK=8.6436 MHz.
10	TEST	I	Test pin, always grounded.
11	PDO	O	1,Z,0 For charge pump used with analog EFM PLL.
12	Vss	—	Ground
13	NC	—	
14	NC	—	
15	NC	—	
16	VPCO	O	1,Z,0 PLL charge pump output used for vari-pitch.
17	VCKI	O	— Clock input fCENTER from the external VCO for varipitch equals 16.9344 MHz.
18	FILO	O	Analog Filter output (slave = digital PLL) for master PLL.
19	FILI	I	Filter input for master PLL.
20	PCO	O	1,Z,0 Charge pump output for master PLL.
21	AVss	—	Analog ground.
22	CLTV	I	VCO control voltage input for master.
23	AVDD	—	Analog supply (+5 V)
24	RF	I	EFM signal input
25	BIAS	I	Grounded
26	ASY1	I	Grounded
27	ASYO	O	1,0 EFM full-swing output. (L = Vss, H = VDD)
28	ASYE	I	Grounded
29	NC	—	
30	PSSL	I	Switching input for the audio data output mode. Serial output with "L" and parallel output with "H".
31	WDCK	O	1,0 D/A interface for 48-bit slot. Word clock f = 2Fs.
32	LRCK	O	1,0 D/A interface for 48-bit slot. LR clock f = Fs.
33	VDD	—	Supply (+5 V)

Pin no.	Pin symbol	I/O	Pin description
34	DA16	O	1,0 DA16 (MSB) output when PSSL = 1. Serial data of the 48-bit slot when PSSL = 0. (2's COMP, MSB first.)
35	DA15	O	1,0 DA15 output when PSSL = 1. Bit clock of the 48-bit slot when PSSL = 0.
36	DA14	O	1,0 DA14 output when PSSL = 1. Serial data of the 64-bit slot when PSSL = 0. (2's COMP, LSB first.)
37	DA13	O	1,0 DA13 output when PSSL = 1. Bit clock of the 64-bit slot when PSSL = 0.
38	DA12	O	1,0 DA12 output when PSSL = 1. LR clock of the 64-bit slot when PSSL = 0.
39	DA11	O	1,0 DA11 output when PSSL = 1. GTOP output when PSSL = 0.
40	DA10	O	1,0 DA10 output when PSSL = 1. XUGF output when PSSL = 0.
41	DA09	O	1,0 DA09 output when PSSL = 1. XPLCK output when PSSL = 0.
42	DA08	O	1,0 DA08 output when PSSL = 1. GFS output when PSSL = 0.
43	DA07	O	1,0 DA07 output when PSSL = 1. RFCK output when PSSL = 0.
44	DA06	O	1,0 DA06 output when PSSL = 1. C2PO output when PSSL = 0.
45	DA05	O	1,0 DA05 output when PSSL = 1. XRAOF output when PSSL = 0.
46	DA04	O	1,0 DA04 output when PSSL = 1. MNT3 output when PSSL = 0.
47	DA03	O	1,0 DA03 output when PSSL = 1. MNT2 output when PSSL = 0.
48	DA02	O	1,0 DA02 output when PSSL = 1. MNT1 output when PSSL = 0.
49	DA01	O	1,0 DA01 output when PSSL = 1. MNT0 output when PSSL = 0.
50	APTR	O	1,0 Control output for aperture correction. "H" with Rch.
51	APTL	O	1,0 Control output for aperture correction. "H" with Lch.
52	Vss	—	Ground
53	XTAI	I	16.9344 MHz x'tal oscillator circuit input. Or 33.8688 MHz input.
54	XTAO	O	1,0 16.9344 MHz x'tal oscillator circuit input.
55	XTSL	I	X'tal selection input pin. "L" when the x'tal is 16.9344 MHz and "H" when the x'tal is 33.8688 MHz.
56	FSTT	O	1,0 2/3 frequency division output of pins 53 and 54. Does not change with vari-pitch.
57	C4M	O	1,0 4.2336 MHz output. Changes simultaneously when varypitch is applied.
58	C16M	O	1,0 16.9344 MHz output. Changes simultaneously when varypitch is applied.
59	MD2	I	Digital-Out on/off control. H when on and L when off.
60	DOUT	O	1,0 Digital-out output pin.
61	EMPH	O	1,0 When the playback disc has emphasis. "H" is output. "L" is output when there is no emphasis.
62	WFCK	O	1,0 WFCK (Write Frame Clock) output.
63	SCOR	O	1,0 "H" output when either sub code sync S0 or S1 is detected.
64	SBSO	O	1,0 Sub P through W serial output.
65	EXCK	I	Clock input for SBSO read-out use.
66	SQSO	O	1,0 SubQ 80 bit and PCM peak level data 16-bit output.
67	SQCK	I	Clock input for SQSO read-out use.
68	MUTE	I	Mute L is cancelled with H.
69	SENS	—	1,Z,0 SENS output. Output to CPU.
70	XRST	I	System set. Reset with "L".
71	DATA	I	Serial data input from CPU.
72	XLAT	I	Latch input from CPU. Latches serial data on the fall.
73	VDD	—	Supply (+5 V)
74	CLOK	I	Serial data transfer clock input from CPU.
75	SEIN	I	Sense input from SSP.
76	CNIN	O	Count signal input of number of track jumps.
77	DATO	O	Serial data output to SSP.
78	XLTO	O	1,0 Serial data latch output to SSP. Latches on the fall.
79	CLKO	O	1,0 Serial data transfer clock output to SSP.
80	MIRR	I	Mirror signal input. Used in jumps of 128 tracks or more with an auto sequencer.

NOTE FOR PARTS LIST

- Part indicated with the mark "●" are not always in stock and possibly to take a long period of time for supplying, or in some case supplying of part may be refused.
- When ordering of part, clearly indicate "1" and "I" (i) to avoid mis-supplying.
- Ordering part without stating its part number can not be supplied.
- Part indicated with the mark "★" is not illustrated in the exploded view.

WARNING:

Parts marked with this symbol have critical characteristics.
Use ONLY replacement parts recommended by the manufacturer.
