

# Service Manual

Professional Digital Audio Tape Deck

## SV-3700

### Color

(H)... Gray Type

### Area

Country Code	Area	Color
(EB)	Great Britain.	(H)
(EG)	F.R. Germany & Italy.	

## SPECIFICATIONS

### Signaling Format

Tape recording system:	Rotary head type DAT
Sampling frequencies:	
For recording:	48 kHz/44.1 kHz (analog/digital input) 32 kHz (digital input only)
For playback:	48 kHz/44.1 kHz/32 kHz (selected automatically)
No. of quantizing bits:	16-bit linear
No. of channels:	2 (stereo)

### Audio Parameters (Recording and Playback System)

Frequency response:	
For 48 kHz:	10 Hz~22 kHz ( $\pm 0.5$ dB)
For 44.1 kHz:	10 Hz~20 kHz ( $\pm 0.5$ dB)
Signal to noise ratio: (dynamic range)	Greater than 92 dB. DIN audio weighted (22.4 Hz to 22.4 kHz bandpass)
Total harmonic distortion:	Less than 0.05% (1 kHz, +4 dBu) Less than 0.007% (1 kHz, +22 dBu)
Wow and flutter:	Unmeasurable

### General

Power supply:	110 V/127 V/220 V 240 V AC, 50/60 Hz
Power consumption:	35 W
External dimensions: (W×H×D)	43×12.2×31.5 cm (16 $\frac{7}{8}$ "×4 $\frac{3}{4}$ "×12 $\frac{3}{8}$ " )
Weight:	6.14 kg (13 $\frac{1}{2}$ pounds)

### Input/Output Jacks

#### Analog

Input jacks:	XLR-3 type
Nominal input level/	+4 dBu (-18 dB rec level)/
Input impedance:	10 k $\Omega$ balanced
Output jacks:	XLR-3 type
Nominal output level/	+4 dBu/-10 dBu (switch selectable)/
Output impedance:	75 $\Omega$ balanced
Phones output:	Max. 30 mW/32 $\Omega$ (matching impedance 8~600 $\Omega$ )

#### Digital (AES/EBU type)

Input jacks:	XLR-3 type/100 $\Omega$ balanced
Output jacks:	XLR-3 type/20 $\Omega$ balanced

#### Digital (IEC TYPE II)

Input jack:	RCA phono type (coaxial)/75 $\Omega$
Output jack:	RCA phono type (coaxial)/75 $\Omega$

### Mechanism

Heads:	Amorphous ferrite composite type
Cylinder diameter:	30 mm
Cylinder rotation speed:	2,000 r.p.m. (recording and playback)
Tape speed:	3.15 mm/sec., 12.225 mm/sec. (selected automatically)
Search speed:	Up to 250 times normal playback speed
FF/Rewind speed:	Up to 400 times normal playback speed
FF/Rewind time:	Approx. 27 sec. (2 hours DAT tape)

#### Note:

Specifications are subject to change without notice.  
Weight and dimensions are approximate.

# Panasonic

## INSTALLATION

### Installation of rack mount kit

1. Assemble the rack ears and panel, and tighten with included screws.

2. Remove the 4 screws on side enclosure, and attach the unit to the rack mount.

### Notes on placement

- This unit is a precision instrument. Be sure to place it on a flat surface.

- Avoid places such as the following:

- Near any equipment or device that generates strong magnetism.
- On any heat-generating equipment or device, or in any place where the temperature is high (35°C or higher).
- Extremely cold places (5°C or below).
- Near an AM/FM tuner or TV.  
(It may produce noise in the broadcast, or disturb the TV picture.)
- For long periods of time in direct sunlight.
- In dusty or smoky locations.
- In locations prone to vibrations.
- In locations where the rear panel is less than 10 cm (about 4") away from the wall or back of an audio rack.

- Do not place heavy objects, other than system components, on top of the unit.

- When carrying or storing the unit, handle it with care so it is not subjected to any strong bumps.

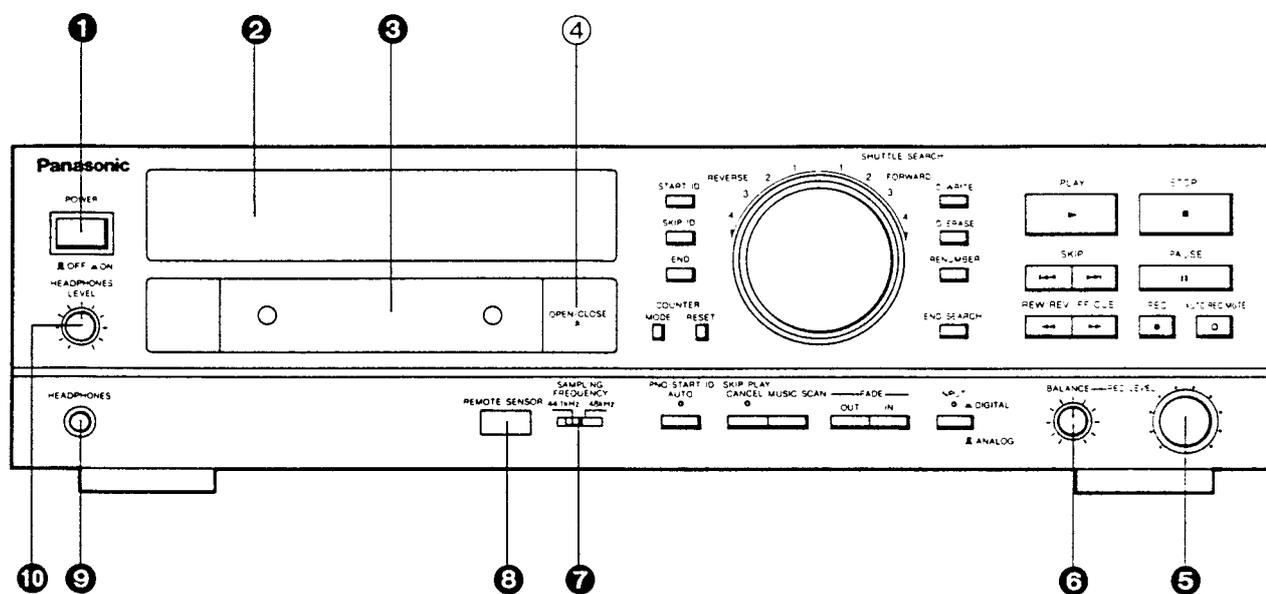

- To avoid problems due to vibration.

- Do not place a book or similar object under this unit.
- Do not route the connection cables (of this or other units) across the operation panel, across the top, or under the unit.

## LOCATION OF CONTROLS

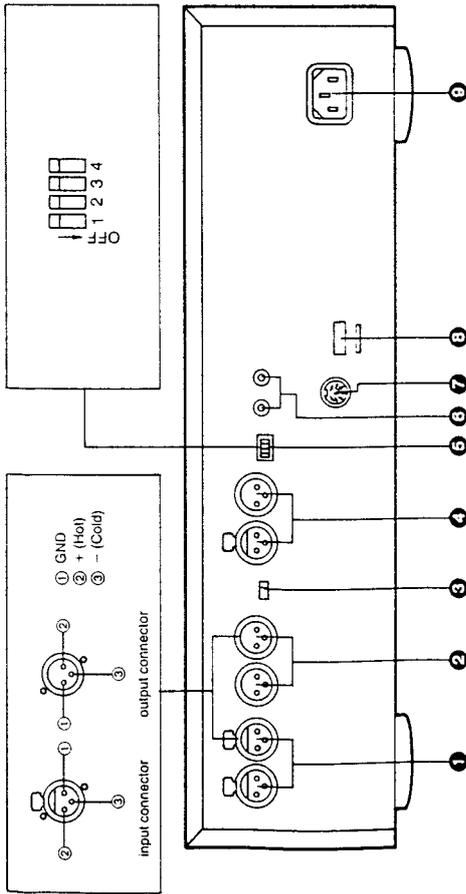

The functions indicated by the black numbers (with white background, ④ etc.) can also be activated using the remote control transmitter.

### Front panel

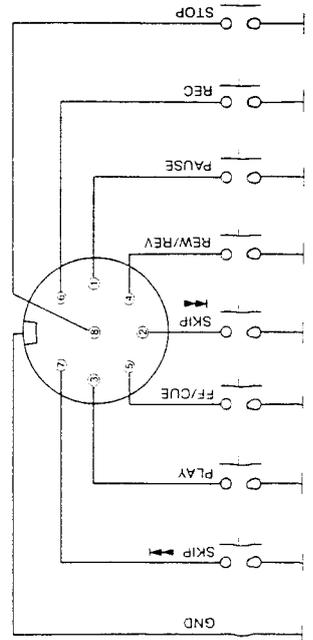

- ① POWER switch (POWER)**
- ② Display panel**  
See page 10.
- ③ Cassette holder**
- ④ OPEN/CLOSE button ( $\blacktriangle$  OPEN/CLOSE)**
- ⑤ REC LEVEL control (REC LEVEL)**  
Use to adjust the recording level of left and right channels.
- ⑥ REC BALANCE control (BALANCE)**  
Use to adjust recording balance between left and right channels.
- ⑦ SAMPLING FREQUENCY selector**  
Select the sampling frequency when making analog recordings. (44.1 kHz or 48 kHz)
- ⑧ Remote control signal sensor (REMOTE SENSOR)**
- ⑨ Phones jack (HEADPHONES)**  
A 6 mm connector for standard stereo headphones.
- ⑩ Phone level control (HEADPHONES LEVEL)**  
Use this control to adjust the output level to the headphones.

## CONNECTIONS

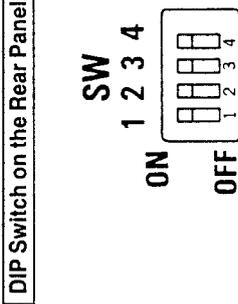

- 1 ANALOG IN terminals**  
These are balanced analog audio XLR input connectors.
- 2 ANALOG OUT terminals**  
These are balanced analog audio XLR output connectors.
- 3 OUTPUT LEVEL selector (+4 dBu/-10 dBu)**  
Select the nominal output level (nominal level for a peak level meter display of -18 dB).
- 4 AES/EBU terminals (IN/OUT)**  
These terminals are for input or output of signals for the professional digital interface.
- 5 DIP switch settings**  
These are used for the following settings:
  - Digital Input Selection (IEC TYPE II or AES/EBU)
  - SCMS ID 6 Status for AES/EBU Input
  - Blank Skip Mode in Program Search
 For further details, see page 35.
- 6 IEC TYPE II (IEC 958) jacks (IN/OUT)**  
These terminals are for input or output of digital signals from/to a consumer unit.
- 7 REMOTE CONTROL jack (PARALLEL) ※**
- 8 Hour meter (5000H)**  
Shows the number of hours of head usage in recording and playback.
- 9 AC IN jack**  
Connect to the grounded AC outlet with the included AC power supply cord.

### ※ Parallel Input Terminals

## DIP SWITCH SETTINGS

Following settings can be made by using DIP switches.

Switch Setting	Function (UP=1, DOWN=0)
1 Digital Input Selection	1-IEC 958 0-AES/EBU
2 SCMS ID6 Status for AES/EBU Input	SW2 SW3 ID Meaning 0 0 00 Copy Free 1 0 10 No further copies 1 1 11 One copy allowed
4 Blank Skip Mode in Program Search	1=ON 0=OFF SV-3700 will advance to the next selection on Program Play mode, if approximately two seconds of silence are encountered.

**Note:**  
IEC 958 is shown as IEC TYPE II on the rear panel of SV-3700.

### SCMS Copy Protection

The Serial Copy Management System (SCMS) is designed to control digital-to-digital DAT copying that a consumer can perform on various digital audio material, including Compact Discs, pre-recorded DAT tapes, and other material via IEC 958 "consumer use" digital audio interfaces (also commonly referred to as "S/P DIF" and LMA C/P 340). SCMS does not affect the ability to make copies using a DAT recorder's analog inputs and outputs, nor does it apply to digital-to-digital copies made via the AES/EBU professional digital audio interface.

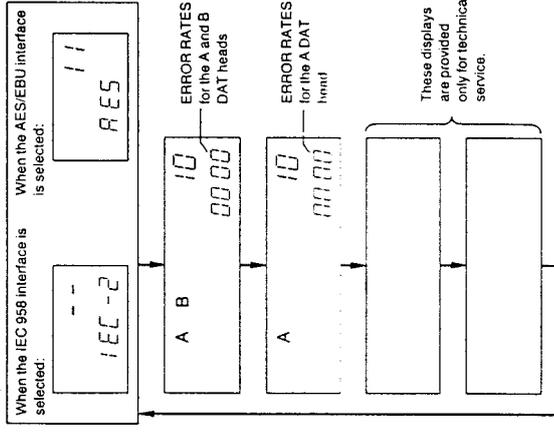

Only one serial (or generation) digital-to-digital copy can be made from a copyright protected source, such as a commercial CD or pre-recorded DAT. Serial Copy Management System labels are generated onto tape each time an SCMS-equipped consumer DAT machine records an audio signal to tape, no matter whether the source is from the analog or digital inputs.

Technically, the SCMS labels for DAT are encoded into the SubCode sections of the main digital data area, specifically "ID6". The SV-3700's rear-panel DIP switches allow the user to preset the SCMS status bits of ID6 onto the DAT recording. For legal reasons, the ID6 bits are only modified if the source input is the AES/EBU Digital I/O, during digital copying via the IEC "consumer use" input, the SV-3700 simply copies across the current status of SCMS codes indicated by the Channel Status. To prevent a master DAT tape being copied on a consumer deck, for example, you might select switch setting for "ID6=10", which would prevent any further digital copying of this copyrighted cassette via a consumer DAT. Alternatively, you might select "ID6=00", so that any number of digital copies could be made on a consumer deck. Selection of "ID6=11" will designate a final copyright protected pre-recorded product, which would behave the same way on consumer SCMS-equipped DAT decks as a normal commercial release.

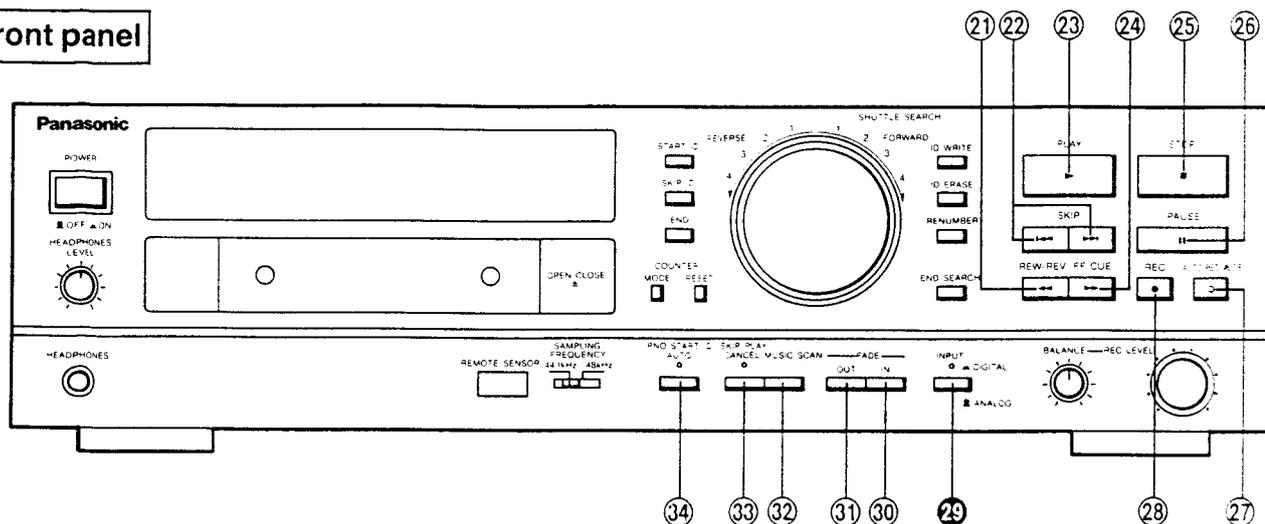

### DISPLAYING SCMS STATUS AND ERROR RATES

The SCMS status of a DAT recording can be displayed on the SV-3700 by simultaneously pressing the front-panel COUNTER MODE, RESET and PAUSE buttons. Now shown within the normal Time Display window will be the type of digital interface that has been selected via the rear-panel DIP switch—AES/EBU or IEC 958 "consumer use"—while the PNO display now shows the ID6 value of the recording, 00, 10 or 11. If the COUNTER MODE button is pressed for a second time, the SV-3700 will display ERROR RATES; the mode can be cancelled by hitting the RESET button.

Each time the COUNTER MODE button is pressed, the display changes as follows:

## Front panel

②① **REW/REV button (◀◀ REW/REV)**

Use to rewind the tape, or for audible high-speed search in play mode (review).

②② **SKIP buttons (◀◀•▶▶ SKIP)**

Use the skip buttons to advance to the desired program. The ▶▶ button skips the program forward. The ◀◀ button skips the program backward. Repeated pressing of the Skip buttons causes the unit to skip forwards or backwards several programs.

②③ **PLAY button/indicator (▶ PLAY)**

Use to initiate recording or playback mode. Use also to record program numbers manually.

②④ **FF/CUE button (▶▶ FF/CUE)**

Use to advance the tape rapidly, or for audible high-speed search (cue).

②⑤ **STOP button (■ STOP)**

Use to stop all functions. This button also clears the program memory.

②⑥ **PAUSE button/indicator (|| PAUSE)**

Use to temporarily interrupt playback or recording mode.

②⑦ **AUTO REC MUTE button (◻ AUTO REC MUTE)**

Use to automatically insert a silent passage approximately four seconds long during a recording.

②⑧ **RECORD button/indicator (● REC)**

Use to place the unit in record standby mode.

②⑨ **INPUT selector button/indicator (INPUT)**

Use to select digital or analog recording input.

③⑩ **FADE IN button (FADE IN)**

Use to start recording and increase the sound level gradually for approx. 2½ seconds, until full record level is reached.

③① **FADE OUT button (FADE OUT)**

Use to end a recording by gradually reducing the recorded sound level for approx. 5 seconds.

③② **MUSIC SCAN button (MUSIC SCAN)**

Use to play back the beginning of each recorded program on the tape for about 15 seconds. This is useful for quick identification of program contents.

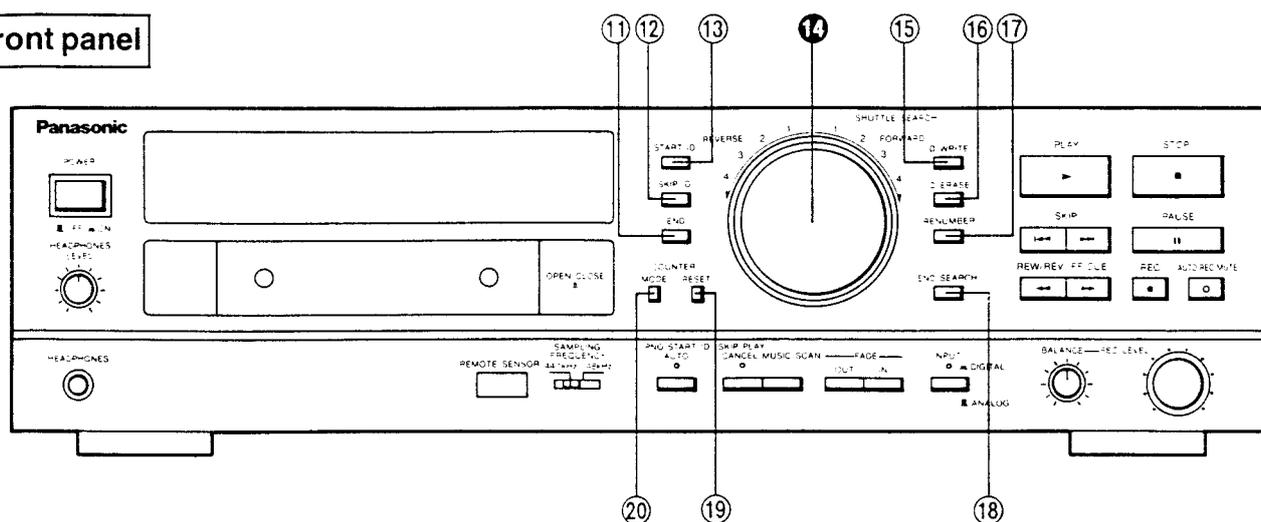

③③ **SKIP PLAY CANCEL button/indicator (SKIP PLAY CANCEL)**

Use to release skip mode.

③④ **PNO/START ID AUTO button/indicator (PNO/START ID AUTO)**

Use to automatically record program numbers or Start ID's during recording or indexing by detecting the beginning of signal after a blank position.

## Front panel

### ⑪ END button (END)

Use to record an End Mark on a recording.

### ⑫ SKIP ID button (SKIP ID)

Use to enter the Skip ID mode.

### ⑬ START ID button (START ID)

Use to enter the Start ID mode.

### ⑭ SHUTTLE SEARCH dial (SHUTTLE SEARCH)

Use to locate specific places on the tape during play and pause modes at high speed, in either forward or reverse directions.

### ⑮ ID WRITE button (ID WRITE)

Use to record Start or Skip ID's during indexing\*.

\*Indexing allows certain DAT subcode data that has been recorded on the tape to be changed without affecting the actual program recording.

With this unit, the following types of indexing are possible.

1. Recording or erasure of Start ID's at the beginning of a program
2. Recording or erasure of Skip ID's
3. Renumber function

### ⑯ ID ERASE button (ID ERASE)

Use to erase Start or Skip ID's during indexing.

### ⑰ RENUMBER button (RENUMBER)

Use to assign program numbers (01, 02, 03...) to Start ID's recorded during indexing.

### ⑱ END SEARCH button (END SEARCH)

Use to advance at high speed to the end of the recorded portion of the tape.

Use also to continue recording from the last recorded position, or to find the total number of programs or total time recorded on the tape (in the case of tapes where absolute time and program numbers have been recorded).

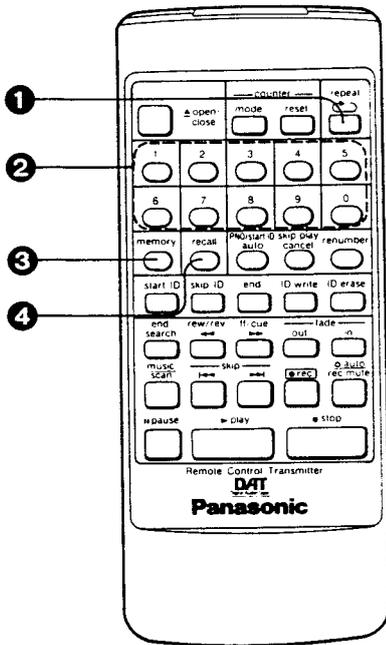

### ⑲ COUNTER RESET button (COUNTER RESET)

Use to reset the tape counter to "0000" (when the display mode is set to tape counter).

### ⑳ COUNTER MODE button (COUNTER MODE)

Use to select the desired counter mode, between Absolute time, Program time, Time Remaining, TOC and tape counter.

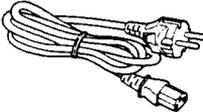

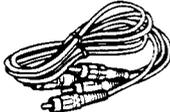

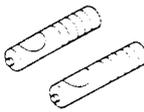

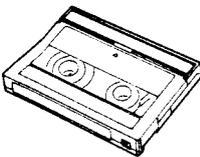

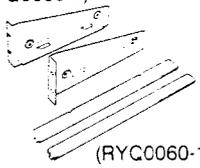

**Remote control transmitter**

- 1 Repeat button (repeat )**  
Use to repeat playback of a tape or a programmed sequence.
- 2 Program buttons (1~9, 0)**  
Use to select program numbers, to cue to a desired program, etc.
- 3 Memory button (memory)**  
Use to program a random playback sequence.
- 4 Recall button (recall)**  
Use to display and check program numbers that have been memorized.

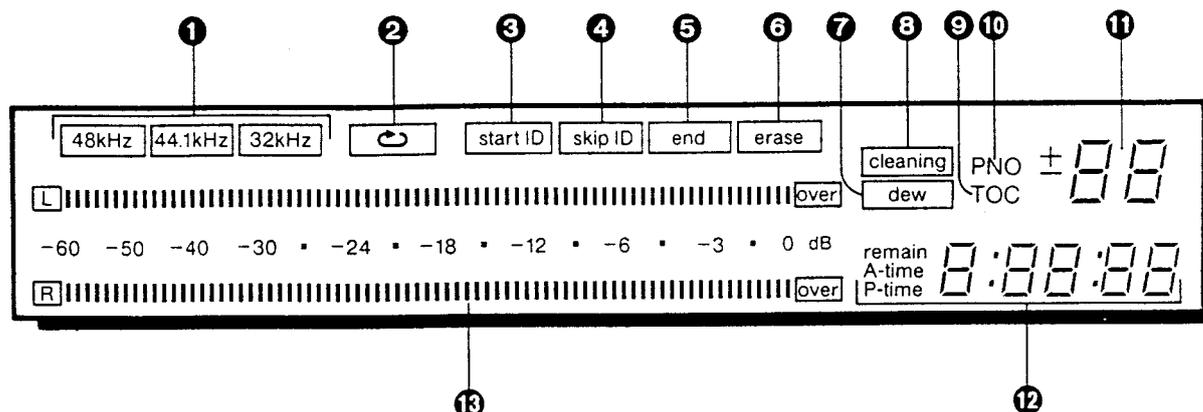

Unnumbered buttons on the remote control transmitter function identically to their corresponding parts on the unit.

**ACCESSORIES**

<ul style="list-style-type: none"> <li>• AC power supply cord ..... 1 (SJAD8 (EB) RJA0003-K (EG))</li> </ul> 	<ul style="list-style-type: none"> <li>• Coaxial cable ..... 1 (SJPD19-1E)</li> </ul> 	<ul style="list-style-type: none"> <li>• Remote control transmitter ..... 1 (RAK-SV3002W)</li> </ul> 	<ul style="list-style-type: none"> <li>• Batteries ..... 2 (UM-4NEP-2S)</li> </ul> 
<ul style="list-style-type: none"> <li>• Cleaning tape ..... 1 (RT-RCLP)</li> </ul> 	<ul style="list-style-type: none"> <li>• Rack mount kit ..... 1 (RYC0059-1)</li> </ul> 	<ul style="list-style-type: none"> <li>• Screws ..... 8 (XYN3 + F10FZ)</li> </ul> 	

**Note:** Configuration of AC power supply cord differs according to area.

## Display panel

**1 Sampling frequency indicators**

Displays sampling frequency of digital signals during recording or playback.

Changes automatically depending on input signal.

**2 Repeat indicator**

This indicator is used for repeat loop-play function.

Indicates that all programs or memorized programs can be played back repeatedly (  ).

**3 start ID indicator**

Indicates that a Start ID is being or has been recorded.

**4 skip ID indicator**

Indicates that a Skip ID is being or has been recorded.

**5 end indicator**

Indicates that an End Mark is being or has been recorded.

**6 erase indicator**

Indicates that a Start ID or Skip ID is being erased.

**7 dew indicator**

Indicates the formation of dew within the unit.

**8 cleaning indicator**

Indicates that the DAT heads need cleaning.

(See page 38.)

**9 TOC (table of contents) indicator**

Indicates the total program count and tape length of a tape onto which the TOC information has been recorded.

**10 PNO (program number) indicator**

Indicates the number of the current program.

**11 Program number display**

Displays the TOC information when TOC indicator appears. Displays the number of the program when PNO indicator appears.

**12 Counter display panel**

The following are displayed according to the setting of the counter mode button:

- 1) absolute time  
This display is always shown when power is first switched on.
- 2) program time
- 3) remaining time
- 4) TOC information
- 5) tape counter

**13 Peak level meter**

Recording level in recording and playback level during playback are indicated by a bar graph. Standard I/O level of  $+4/-10$  dBu is shown at  $-18$  dB.

## ■ SV-3700 DAT MAINTENANCE CHART

### • REGULAR MAINTENANCE

The purpose of periodic maintenance as recommended is to keep the equipment in the best possible operating condition throughout its useful life. Observance of this maintenance schedule ensures that maximum performance and reliability is obtained from the machine.

Regular maintenance is necessary because the DAT Recorder is a high-technology piece of equipment, containing DC motors, head cylinder assemblies, and a complex mechanism. These components deteriorate over time. Dust and dirt can clog the head gap, which affects the sound. In light of this, it is very important that overall maintenance be performed according to the maintenance chart to avoid problems resulting from heavy image. Maintenance should also be performed after any repairs on the equipment.

Maintenance is particularly recommended for DAT Recorders used in commercial and broadcast applications for several reasons. Installation and application are frequently under less than ideal conditions, such as long usage times and poor environmental conditions. All of this adversely affects the life span and performance of the machine. Regular maintenance assures that the purchaser obtains maximum value for this expenditure.

**Note:** Refer to the hour meter to know when to perform the maintenance.

Part Name	Part Number	500	1000	1500	2000	2500	3000	3500	4000	4500	5000

● Replacement, ○ Cleaning

### • DAT Head and Tape Transport Cleaning

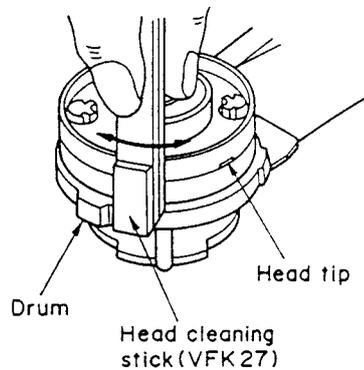

Through normal usage of any tape machine, dirt and debris from the tape accumulates on the heads, which eventually causes performance problems. By using a cleaning cassette regularly, dirt buildup can be minimized, prolonging the life of the tape heads, and also keeping tape posts, tape guides, and the pinch roller clean.

### • CLEANING

1. Play the cleaning cassette (Panasonic Part No. RT-RCLP) for 15-20 seconds.
2. Do not use the same part of the cleaning tape more than once.
3. Clean all tape contact surface, including A/C head upper and lower drum, thoroughly with a soft cloth soaked in alcohol.
4. Clean both heads by gently rubbing in a horizontal direction, as depicted, using a head cleaning stick (VFK27) or a lint free cloth moistened with alcohol.
5. Wipe all tape contact surfaces, including upper and lower drum, with a dry soft cloth to ensure that all residual moisture is removed from the tape contact surfaces.

### Note:

1. When cleaning the upper drum, hold it secure with your finger tips.
2. Use solvents sparingly, excess alcohol will dilute and remove the bearing lubricant in the capstan motor and rotary guides.

### • IMPORTANT

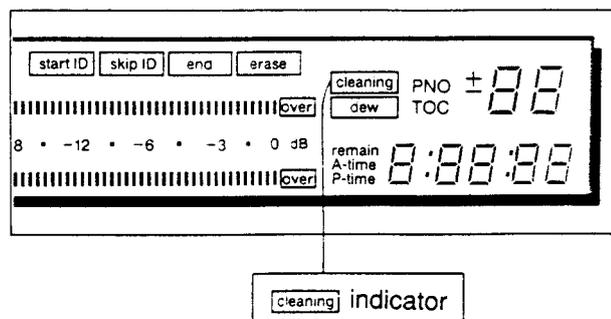

After cleaning the head and tape contact surfaces, check the error rate using the error rate reference tape (Part No. RD-ER01). Target error rate is less than 50. A unit with a new head cylinder should be capable of producing error rates below 10, as long as the reference tape is in good condition.

For information on how to display the error rate, see page 84.

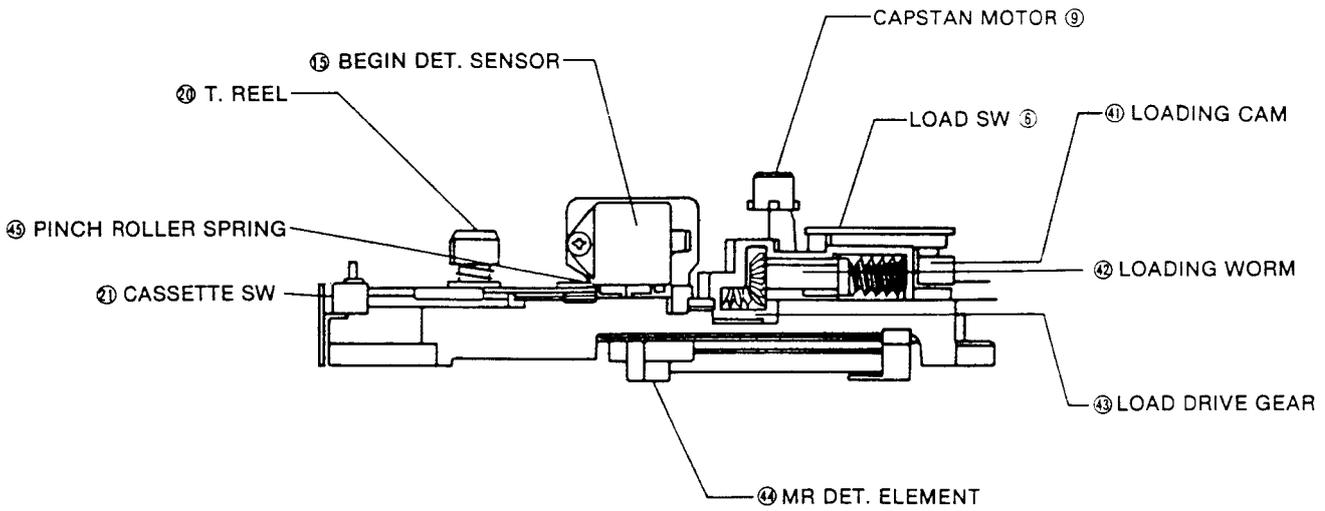

### REGARDING THE CLEANING INDICATOR...

The cleaning indicator will illuminate when the error rate remains higher than 1000 for more than 10 seconds.

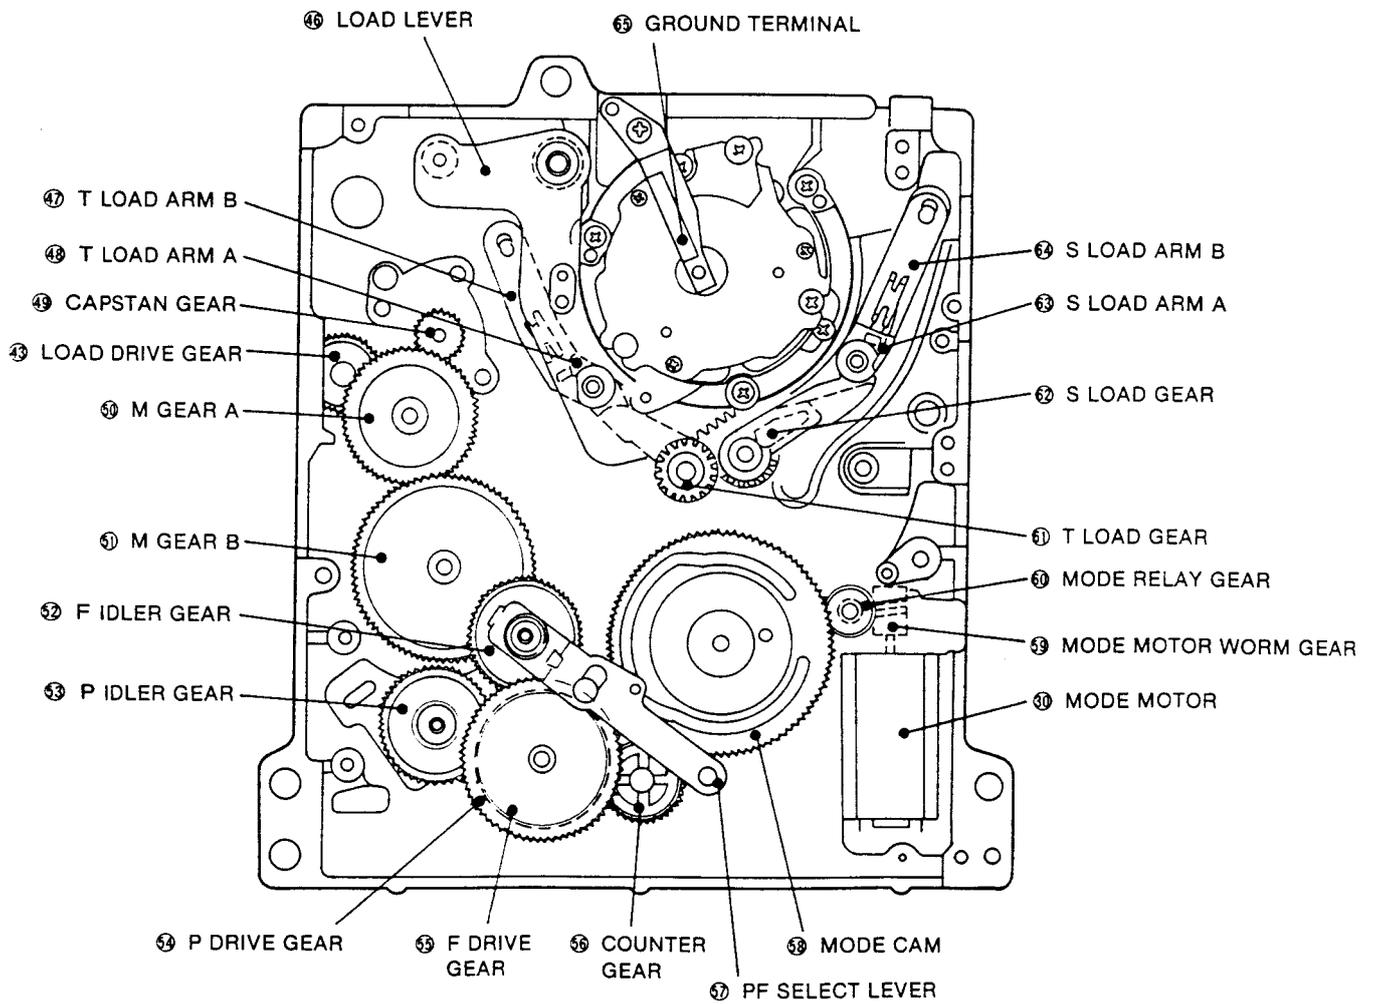

Although dirt and debris are the most common cause of an elevated error rate, there are other conditions that may cause it. Therefore, do not assume that a cleaning indication means that the head is dirty.

• Side view

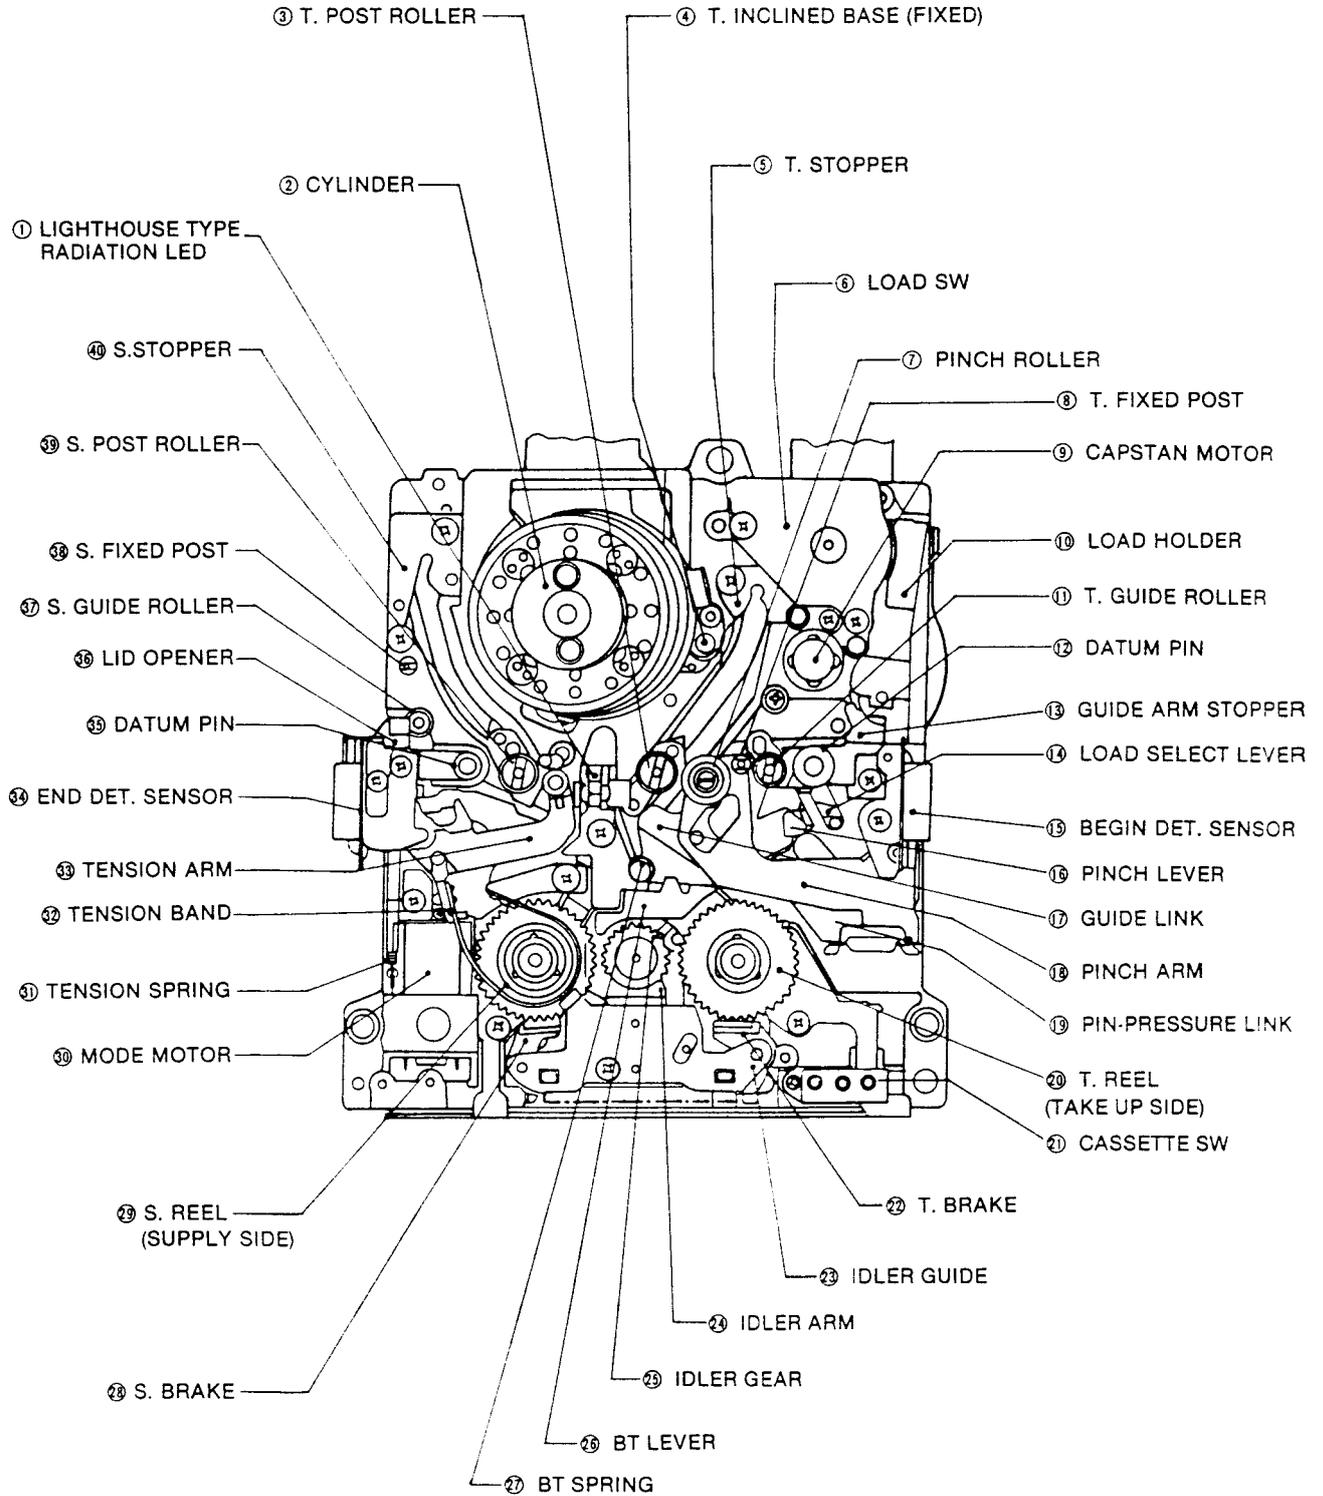

• Bottom view

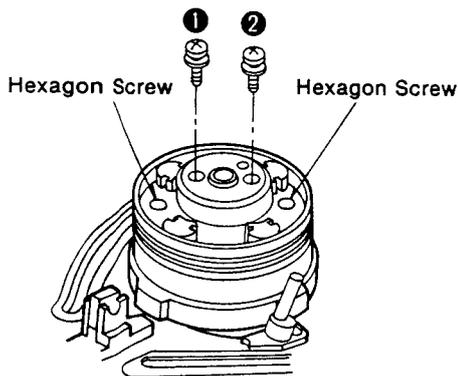

• MECHANISM COMPONENT LAYOUT

• Top view

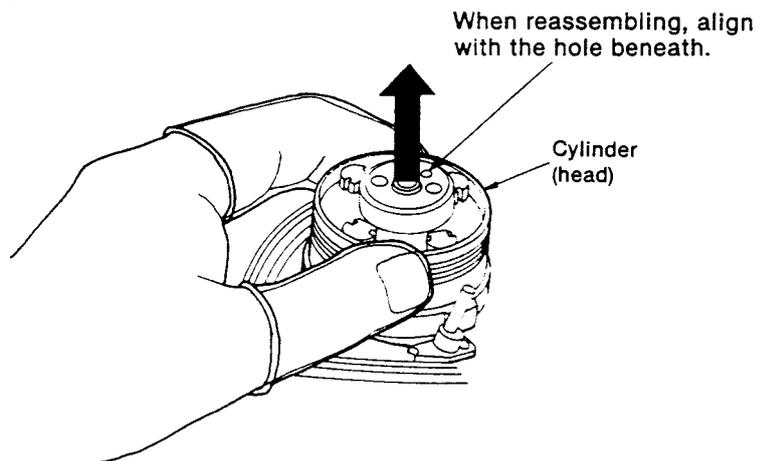

⑤⑨ M GEAR A	Transmits movement of capstan gear and load drive gear.	⑤⑩ MODE CAM	Uses movement transmitted from mode relay gear to detect mode positions.
⑤⑪ M GEAR B	Transmits movement of M gear A and F (R) idler gear, engages and disengages in accordance with mode.	⑤⑨ MODE MOTOR WORM GEAR	Transmits movement of mode motor and mode relay gear.
⑤⑫ F IDLER GEAR	Transmits movement of M gear B and F drive gear.	⑤⑩ MODE RELAY GEAR	Transmits movement of mode motor worm gear and mode cam.
⑤⑬ P IDLER GEAR	Transmits movement of M gear B and P drive gear.	⑤⑪ T LOAD GEAR	Transmits movement of load lever and S load gear.
⑤⑭ P DRIVE GEAR	Transmits movement of P idler gear and counter gear.	⑤⑫ S LOAD GEAR	Transmits movement of T load gear and S load arm A (B).
⑤⑮ F DRIVE GEAR	Transmits movement of F idler gear and counter gear.	⑤⑬ S LOAD ARM A	Uses movement transmitted from S load gear to play loading.
⑤⑯ COUNTER GEAR	Transmits movement of F (P) drive gear and idler gear, engages and disengages in accordance with mode.	⑤⑭ S LOAD ARM B	
⑤⑰ PF SELECT LEVER	Switches engagement and disengagement of F (P) idler gear in accordance with mode conditions.	⑤⑮ GROUND TERMINAL	Ground terminal for cylinder motor.

## • REMOVAL OF THE UPPER CYLINDER

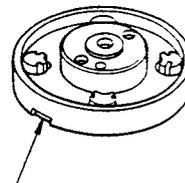

1. Remove the 2 screws (1, 2).

**Caution:** Please do not touch Hexagon screws.

2. Remove the cylinder (head) in the direction of the arrow.

**Note:** Do not touch the cylinder (head) with your bare hand; always be sure to wear a glove or other protection.

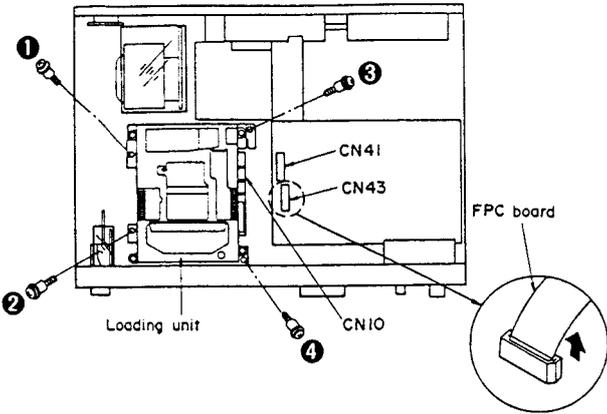

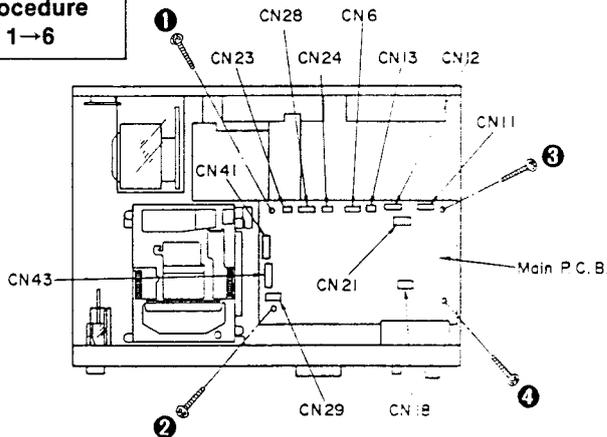

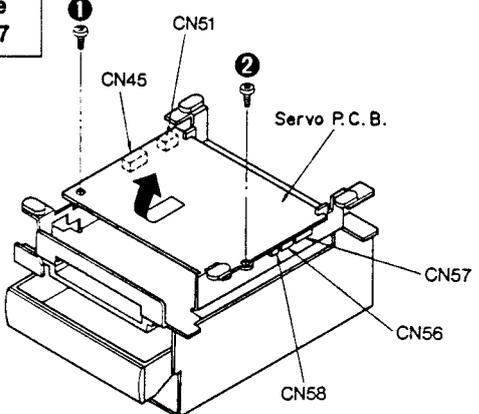

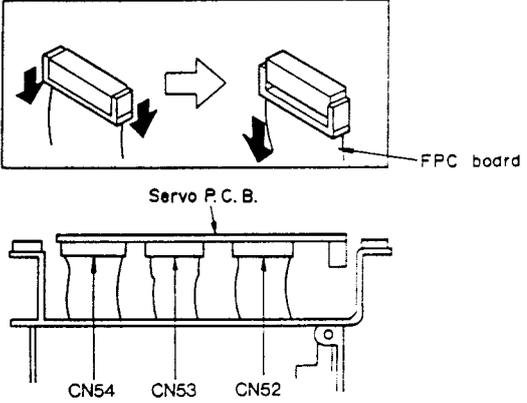

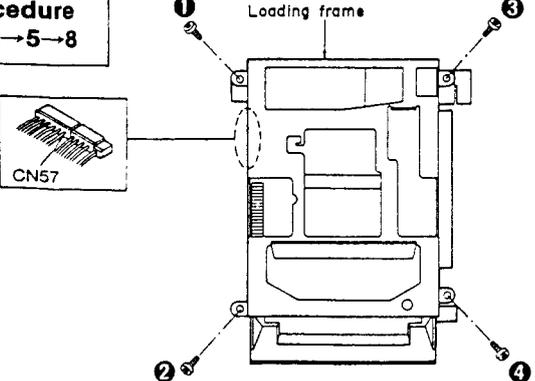

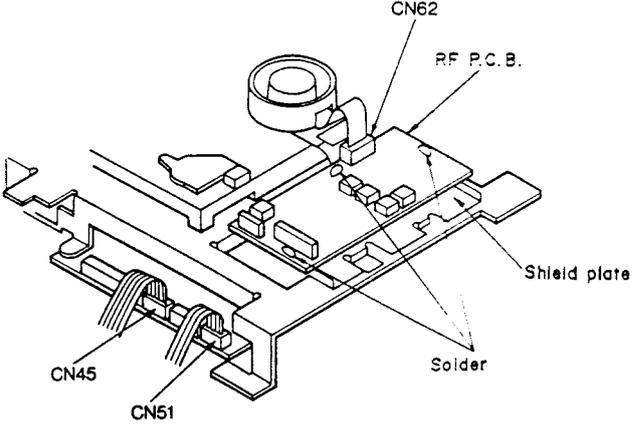

Be sure not to touch the head part.

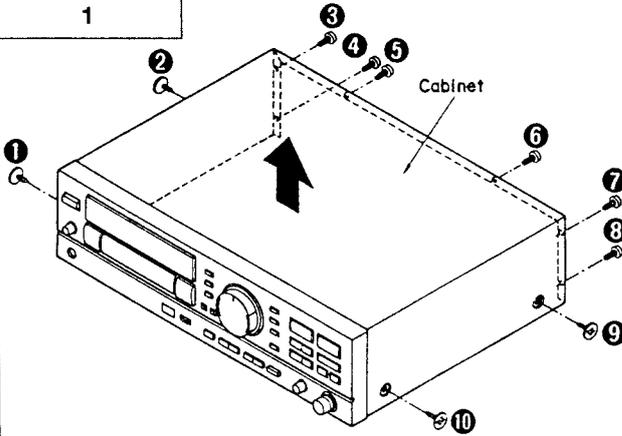

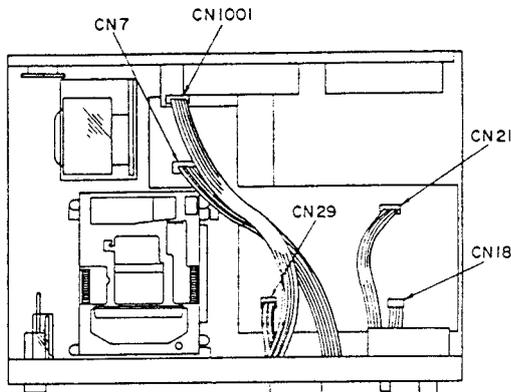

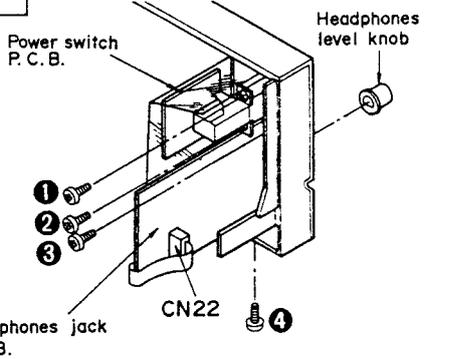

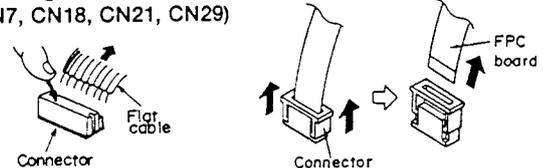

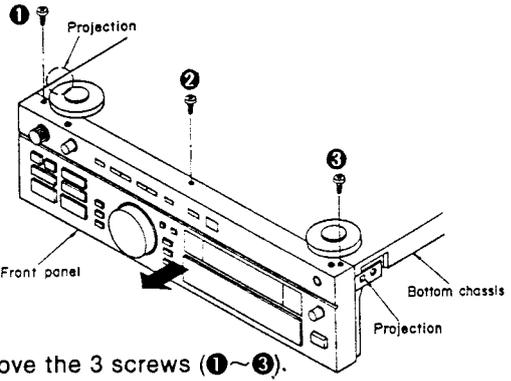

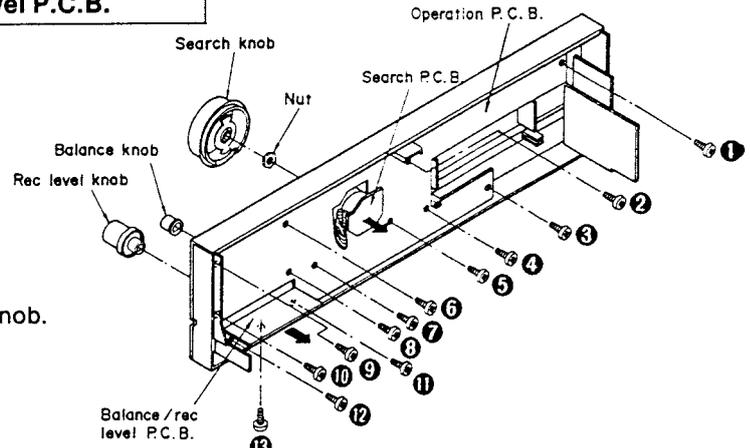

\* When reassembling the cylinder (head), be sure that the direction is correct. (If it is assembled in the wrong direction, data read errors will occur.)

• MECHANISM CONTROLS AND FUNCTIONS

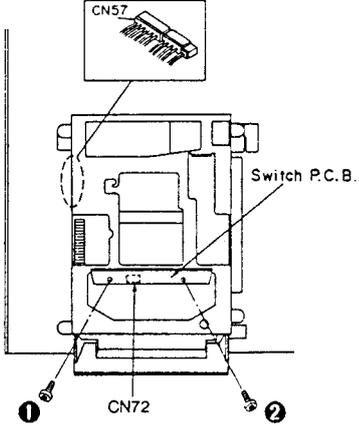

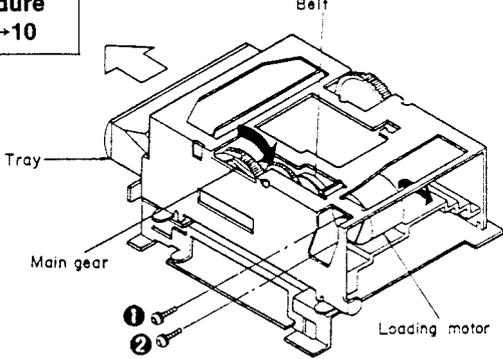

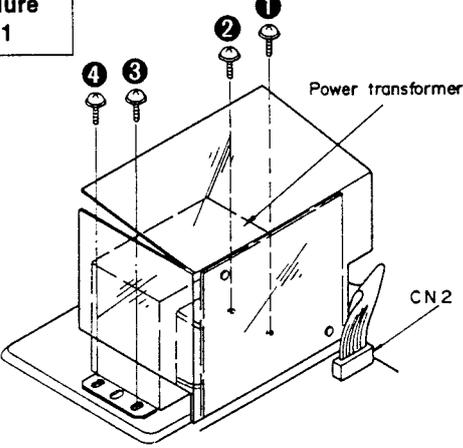

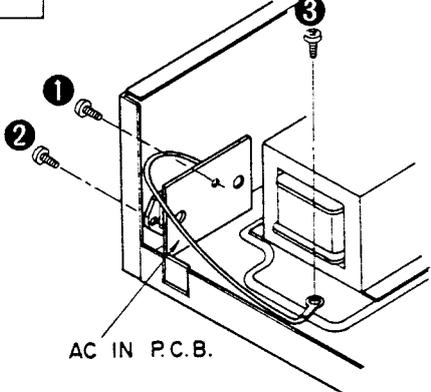

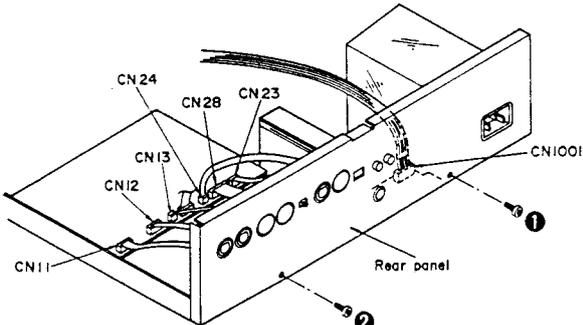

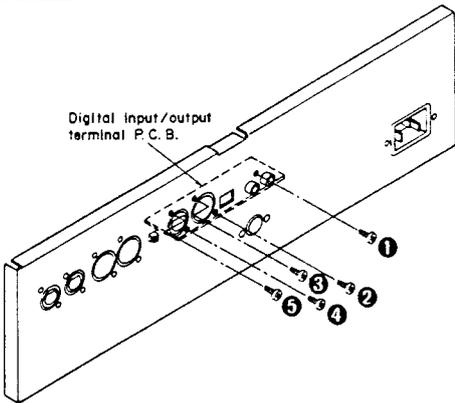

① LIGHT HOUSE TYPE RADIATION LED	Lighthouse-shaped, LEDs blink at start and end of tape.	⑲ IDLER GEAR	Transmits movement to S and T reels in accordance with mode.
② CYLINDER	30mm in diameter, 40 FG pulses, maintains specified speed of 1000 to 3000rpm.	⑳ BT LEVER	Applies back tension to T reel during review.
③ T. POST ROLLER	Regulates tape travel position (upper edge).	㉑ BT SPRING	Provides pressure for back tension lever.
④ T. INCLINED BASE (FIXED)	Regulates angle (90°) at which tape is wound around cylinder (stationary).	㉒ S. BRAKE	Presses brake shoe against S reel base gear to perform braking.
⑤ T. STOPPER	Determines position of T post roller base during loading.	㉓ S. REEL (SUPPLY SIDE)	Supply reel base, 64 FG pulses.
⑥ LOAD SW	Two-bit rotary switch, detects loading position.	㉔ MODE MOTOR	6.5V DC motor, switches mode by forward and reverse revolution.
⑦ PINCH ROLLER	Presses against tape during play and review.	㉕ TENSION SPRING	Provides back tension force of tension regulator.
⑧ T. FIXED POST	Regulates tape travel position.	㉖ TENSION BAND	Mounted to tension regulator, applies back tension to S reel base.
⑨ CAPSTAN MOTOR	1.5mm in diameter, 290 FG pulses.	㉗ TENSION ARM	Detects tape condition and applies back tension during play and review.
⑩ LOAD HOLDER	Contains loading drive gear and worm gear, engages and disengages M gear A.	㉘ END DET. SENSOR	Light-receiving element for LED (detection at end of tape).
⑪ T. GUIDE ROLLER	Regulates tape travel position (top edge).	㉙ DATUM PIN	Regulates width and height (left side) during loading of cassette tape.
⑫ DATUM PIN	Regulates width and height (right side) during loading of cassette tape.	㉚ LID OPENER	Opens cassette lid during loading of tape.
⑬ GUIDE ARM STOPPER	Determines position of T guide roller base K during loading.	㉛ S. GUIDE ROLLER	Regulates tape travel position (bottom edge).
⑭ LOAD SELECT LEVER	Switches engagement and disengagement of loading gear in accordance with loading conditions.	㉜ S. FIXED POST	Regulates tape travel (bottom edge).
⑮ BEGIN DET. SENSOR	Light-receiving element for LED (detection at start of tape).	㉝ S. POST ROLLER	Regulates tape travel position (top edge).
⑯ PINCH LEVER	Presses pinch roller against tape during play and review.	④⑥ S. STOPPER	Determines position of S post roller base during loading.
⑰ GUIDE LINK	Links T post roller base and guide roller base.	④⑦ LOADING CAM	Uses movement transmitted from loading worm to move loading lever.
⑱ PINCH ARM	Comprised of pinch roller and T holding post, presses against the capstan.	④⑧ LOADING WORM	Transmits movement of loading drive gear and loading cam.
⑲① PIN-PRESSURE LINK	Connected by the pin pressure spring and the pinch arm.	④⑨ LOAD DRIVE GEAR	Transmits movement of M gear A and loading worm, engages and disengages in accordance with mode.
⑲② T. REEL (TAKE UP SIDE)	Take-up reel base, 64 FG pulses.	④⑩ MR DET. ELEMENT	Detects magnetic changes (290 pulses) of flywheel.
⑲③ CASSETTE SW	Detects cassette information (mistaken erasure, cassette detection).	④⑪ PINCH ROLLER SPRING	Mounted to the pinch arm, returns the pinch roller.
⑲④ T. BRAKE	Presses brake gear against reel base gear to perform braking.	④⑫ LOAD LEVER	Transmits movement of load cam and load gear.
⑲⑤ IDLER GUIDE	Holding cover for idler arm and S and T brakes.	④⑬ T LOAD ARM B	Uses movement transmitted from T load gear to play loading.
⑲⑥ IDLER ARM	Moves left or right in accordance with mode condition, transmits movement of counter gear to S and T reels.	④⑭ T LOAD ARM A	
		④⑮ CAPSTAN GEAR	Uses movement transmitted from capstan motor to move M gear A.

## • ELECTRICAL ADJUSTMENT

### • Adjustment points

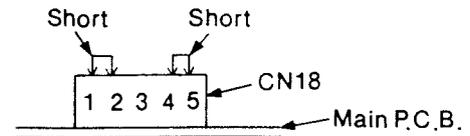

### Equipment and Tools

- 2-channel 30 MHz oscilloscope with external trigger and dual time base
  - 2 oscilloscope probes (10 : 1)\*
  - Frequency counter
  - AF oscillator (OSC)
  - Distortion analyser
  - DC electronic voltmeter (EVM)
  - Post roller adjustment screwdriver  
: SZZV1102C
  - Standard test tapes
    - : RD-PG01 (PG reference tape)
    - : RD-ER01 (Error rate tape)
    - : RD-LR02 (Linearity adjustment tape)
  - Blank DAT cassette for recording and playback  
: RT-R60P, RT-R90P, RT-R120P
  - Standard electrical tools and equipment
- \* **NOTE:** The oscilloscope voltage settings in the charts and the waveform examples assume use of the specified 10: 1 probes.

Ref. No. 20	How to check the main P.C.B.
Procedure 20	

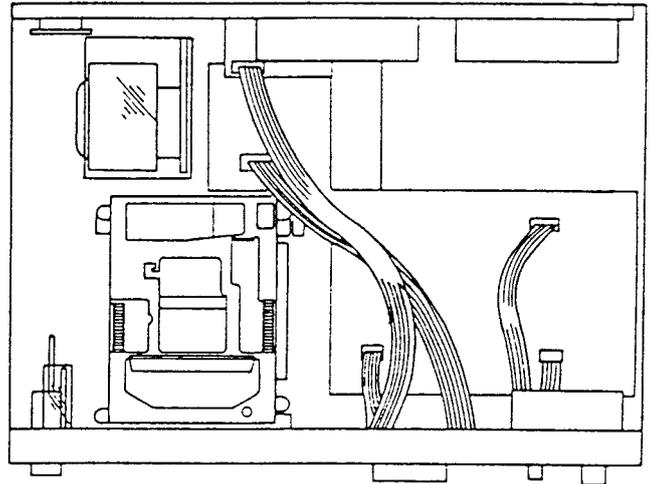

To gain access to the bottom of the main P.C.B., disconnect CN18 and CN21 in order to turn the board upward.  
Connect a jumper wire between pins 1 & 2 and between pins 4 & 5 of CN18 when operating the unit in this condition.

## MEASUREMENTS AND ADJUSTMENTS

### PREPARATION

- Remove the cabinet  
(Refer to Procedure 1 under "Disassembly Instructions").

If the loading unit is to be removed for adjustment, note the following.

#### (PREPARATIONS)

- Remove the loading unit. (With the underside facing up.)  
(Refer to Procedure 5 under "Disassembly Instructions." However, leave the flat cable and the connector as they are.)
- Open the cassette holder.
- Move the slider opening/closing plate of the removed loading unit in the direction indicated by the arrow in Fig. 1, and hook it above the prong of the reinforcement plate.  
**Caution:** The slider opening/closing plate will be deformed if it is left as is.
- Place a tape with the slider lock released in the mechanism.
- Switch on the power and check the loading operation.

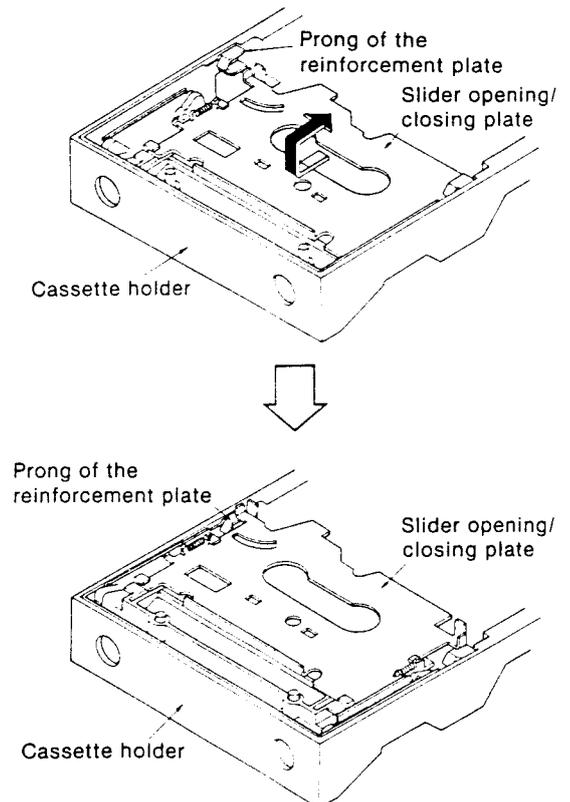

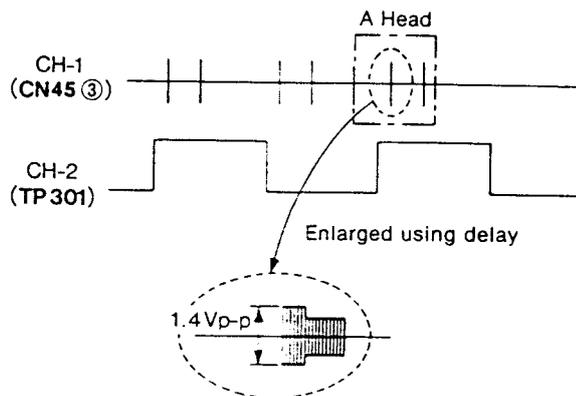

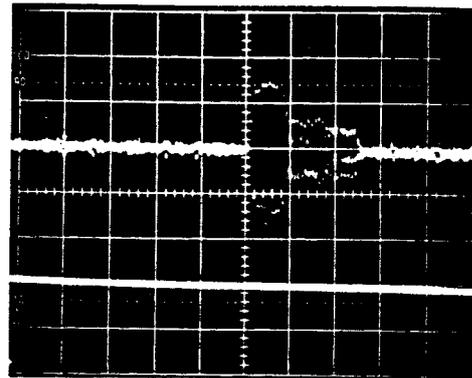

Fig. 1

### 3. ATF Gain Adjustment

1. Set up the oscilloscope and connect as shown below.

	CH-1	CH-2
Test point	CN45 ③ (PILOT)	TP301 (R3CP)
Volts/Div.	50mV	0.5V
Time/Div.	5msec.	
Delay	0.1msec.	
Trig.	CH-2	
AC-GND-DC	AC	DC
Adjustment point	VR107	

2. Load and play the error rate tape (RD-ER01).
3. Adjust the delay time for the dual time base to select and display the PILOT signal with the largest amplitude.
4. Adjust VR107 so that the amplitude of the PILOT signal is  $1.4 \pm 0.2V_{p-p}$ . Check the amplitudes of the other PILOT signals to insure that they are a minimum of  $1.2V_{p-p}$ . If not optimize the adjustment of VR107 for the minimum signal level.

### 4. ATF RF Recording Level Adjustment

**NOTE:** This adjustment should only be made after confirming the playback "ATF Gain Adjustment" in step 3 above. Failing to do so will invalidate this adjustment.

1. Make a "0" level recording:
  - (a) Load a blank tape (RT-R60P etc.) into the unit.
  - (b) Put the unit into RECORD mode.
  - (c) Run the tape, recording for a minimum of 20 to 30 seconds.
  - (d) Rewind the tape to the beginning of the "0" level signal recording.
2. Connect and set up the oscilloscope as follows:

	CH-1	CH-2
Test point	CN45 ③ (PILOT)	TP301 (R3CP)
Volts/Div.	50mV	0.5V
Time/Div.	2msec.	
Delay Time/Div.	0.2msec.	
Trig.	CH-2	
AC-GND-DC	AC	DC
Adjustment point	VR104: Head A, VR105: Head B	

3. While playing back the blank signal portion of the tape, verify that the signal amplitude falls in the range of  $1.4 \pm 0.2V_{p-p}$ .

Standard value:  $1.4 \pm 0.2V_{p-p}$

4. If the ATF signal is not within specification press the stop button and adjust VR104 and VR105 accordingly. Making finer adjustments as the trials approach the specified level.

LEVEL/HEAD	A: VR104	B: VR105
More than 1.6V	Turn ⌚	Turn ⌚
Less than 1.4V	Turn ⌚	Turn ⌚

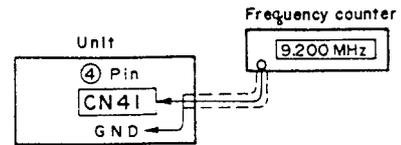

After making the adjustment, make another blank signal recording, on a different portion of the tape (use the END SEARCH feature), for 20 to 30 seconds. Rewind the tape to the beginning of the new recording and repeat from step 3 until the specification is met.

**Note:**

It is necessary to use a different portion of the tape for each trial because DAT does not erase the original signal, it "over writes" the new signal. Using a new portion of the tape will prevent maladjustment due to incomplete "over write" of the previously recorded signal.

## 1. PLL Free Run Adjustment

1. Connect the frequency counter as shown in figure.
2. Set the power switch to "ON".
3. Open the cassette holder drawer.
4. Adjust VR108 as required until the frequency counter reads  $9.2 \pm 0.2$  MHz.

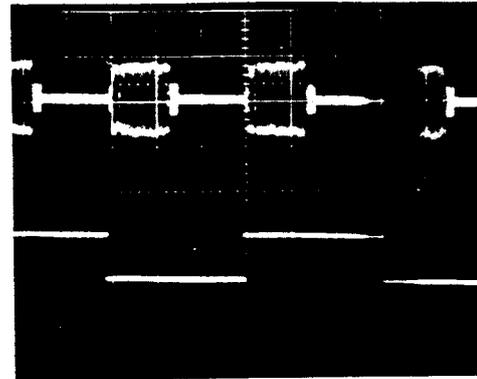

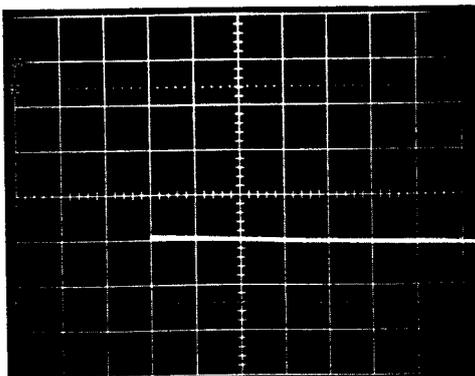

## 2. PG Phase Adjustment

1. Set up the oscilloscope and connect as shown below.

	CH-1	CH-2
Test point	TP101 (RPRF)	TP301 (R3CP)
Volts/Div.	50mV	0.5V
Time/Div.	5msec.	
Delay Time/Div.	50μsec.	
Trig.	CH-2	
AC-GND-DC	AC	DC
Adjustment point	VR201	

2. Note the "t" time indicated on the PG reference tape (RD-PG01), then load and play the tape.
3. While the tape is being played, the waveform shown on the right should appear.
4. Adjust the delay time for the dual time base to display the leading edge of the CH-2 (R3CP) waveform.
5. The time from the leading edge of R3CP to the leading edge of the 522kHz portion of the RF waveform must be within  $\pm 40\mu\text{sec}$  of the time indicated on the PG reference tape. Adjust VR201 as required, so that the time "t" (in the figure below), falls within specified limits.

### Note:

If the output levels of heads A and B are not equal, the "ATF RF Recording Level Adjustment" described in procedure 4 might be made improperly. Adjust the ATF RF Recording Level by following procedure 4 and then check the output level of the heads again. (At this time, it is not necessary to make adjustment described in procedure 2.)

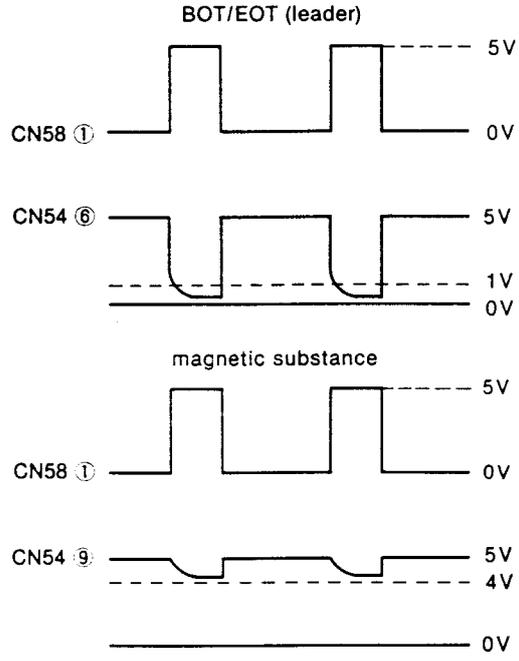

t: Value ( $\mu\text{sec}$ ) indicated on the standard tape  $\pm 40\mu\text{sec}$ .

### 7. BOT/EOT Detection Sensitivity Verification and Adjustment

1. Make sure that the tape stops with the leader portion (the beginning and ending portion).
- ※ If the tape does not stop at the leader, make adjustment by following procedure outlined below.
  - ① Insert a blank tape into the tape compartment of the set and press the playback button at the end of the tape.
  - ② Set up the oscilloscope and connect as shown below.

	CH-1	CH-2
Test point	<b>CN54</b> ⑥ (BOT/EOT) ⑨ (magnetic substance)	<b>CN58 ①</b>
Volts/Div.	0.2V	0.2V
Time/Div.	2msec.	
Delay	—	
Trig.	CH-2	
AC-GND-DC	AC	DC
Adjustment point	VR271	

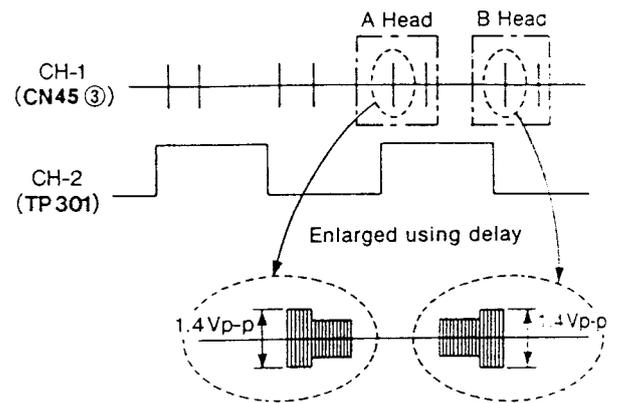

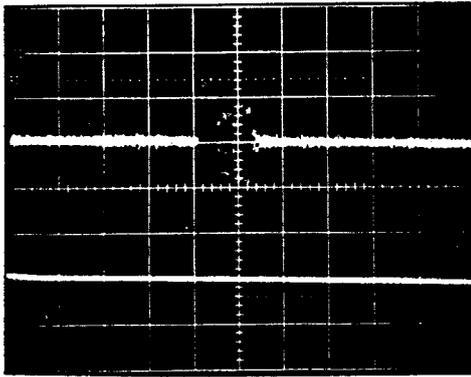

- ③ Adjust the amplitude of waveform to less than 1V at the magnetic substance and more than 4V at the leader on VR271.

### 8. Linearity Adjustment

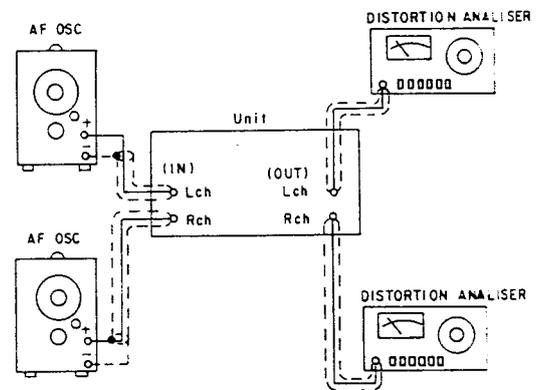

**CAUTION:** ONLY THE POST ROLLERS ARE USED FOR THE LINEARITY ADJUSTMENT. DO NOT ADJUST THE GUIDE ROLLERS. THIS ADJUSTMENT IS VERY CRITICAL AND AFFECTS COMPATIBILITY WITH OTHER DAT RECORDERS.

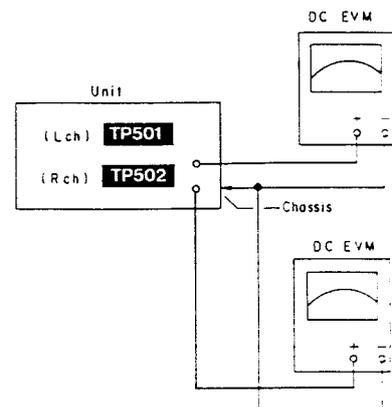

## 5. DAC Output Balance Adjustment

1. Load a blank tape for recording.
2. Use a signal generator to feed a 1 kHz signal to ANALOG IN.
3. Set the recorder to the record mode and adjust **INPUT VR** so that the level meter moves to **-20dB**.
4. Adjust **VR501 (Lch)** and **VR502 (Rch)** to minimize the distortion rate. (Reference distortion rate of about 0.05%)
5. After adjustment, check that the playback output is **-20dB ± 0.2dB** with respect to 0dB at 1 kHz.

## 6. DAC Offset Adjustment

1. Set the recorder to DIGITAL IN in the stop mode.
2. Connect a digital voltmeter to **TP501 (Lch)** and **TP502 (Rch)**.
3. Adjust **VR503 (Lch)** and **VR504 (Rch)** so that the voltage at the test point above is **0 ± 1 mV**.

## ■ TERMINAL FUNCTION OF IC'S

### • IC101 (AN7030SE2): RF AMP.

Pin No.	Mark	I/O Division	Function	Pin No.	Mark	I/O Division	Function
1	V <sub>CC</sub> 1	I	Power supply terminal	24	HSW	I	Head switching signal
2	ACH FB	O	Playback feed back signal (Ach)	25	AR/RSEL	I	Not used, connected to power supply
3	ACH IN	I	Playback amp. signal (Ach)	26	R/PSEL	I	Recording/playback select signal (REC: "H", PLAY: "L")
4	GND 1	—	GND terminal	27	EQ OUT	O	Equalization signal
5	BCH IN	I	Playback amp. signal (Bch)	28	EQ IN 3	I	Equalization amp. signal
6	BCH FB	O	Playback feed back signal (Bch)	29	EQ IN 2		
7	AREC PCM	I	RF recording level adj. terminal	30	EQ IN 1		
8	AREC PLT						
9	AREC ATF						
10	BREC ATF						
11	BREC PLT						
12	BREC PCM						
13	REC CNT 1	I	Track pitch signal	31	BF REQ	I	Equalization amplitude drive terminal (Bch)
14	REC CNT 2	I	ATF area det. signal	32	B PHASE	I	Equalization phase drive terminal (Bch)
15	SRRF IN	I	Recording signal	33	B GAIN	I	Equalization gain drive terminal (Bch)
16	GND 2	—	GND terminal	34	AF REQ	I	Equalization amplitude drive terminal (Ach)
17	VREF	O	Reference voltage terminal (Not used, open)	35	A PHASE	I	Equalization phase drive terminal (Ach)
18	AREC OUT	O	Recording signal (Ach)	36	A GAIN	I	Equalization gain drive terminal (Ach)
19	BREC OUT	O	Recording signal (Bch)	37	SV RF	O	Playback signal
20	BTL REC	O	Recording control signal	38	GND 3	—	GND terminal
21	V <sub>CC</sub> 2	I	Power supply terminal	39	A INT	I	Playback amp. signal (Ach)
22	REC ON	O	Recording drive terminal (REC: "H")	40	B INT	I	Playback amp. signal (Bch)
	PLAY ON	O	Playback drive terminal (PLAY: "H")	41	B INT IN	O	Playback amp. signal (Bch)
				42	A INT IN	O	Playback amp. signal (Ach)

1. Connect and set up the oscilloscope as follows:

	CH-1	CH-2
Test point	CN45 ③ (PILOT)	TP301 (R3CP)
Volts/Div.	0.2V	2.0V
Time/Div.	Ⓐ 5msec. Ⓑ 1msec. Ⓒ 0.2msec.	
Delay Time/Div.	—	
Trig.	CH-2	
AC-GND-DC	AC	DC
Adjustment point	Post rollers (only)	

- Load and play the linearity adjustment tape (RD-LR02). Please use the recorded signal portion on tape (after 600 count from beginning of tape)
- Use the leading edge of the CH-2 (R3CP) waveform to trigger the oscilloscope to monitor the head "A" side of the RF signal envelope.
- While the tape is playing, gradually adjust the height of the POST ROLLERS until the RF envelope (B) is rectangular.

**CAUTION 1:**  
ADJUSTMENTS MUST BE MADE VERY GRADUALLY.

**CAUTION 2:**  
DO NOT "OVER ADJUST" the POST ROLLERS. It is unlikely that the POST ROLLERS will require more than a QUARTER of a turn in either direction to make the waveform rectangular.

- Adjust VR107 so that the amplitude ( $V_0$ ) of the PILOT waveform ③ is 1.0Vp-p.
- On the PILOT signal waveform ③, verify that the amplitude difference between adjacent tracks falls within 200mV (See figure below). If not, adjust the post rollers.
- Play the standard test tape (RD-ER01), and do "PG Phase adjustment" and "ATF gain adjustment" again.

# SCHEMATIC DIAGRAM

(Parts list on pages 82~84, 94~96.)

(This schematic diagram may be modified at any time with development of new technology.)

### Note 1:

- **S901** : Output level selector switch (+4dBu/-10dBu).
- **S902** : DIP switch.
- Resistance are in ohms ( $\Omega$ ), 1/4 watt unless specified otherwise.  
1K=1,000 ( $\Omega$ ), 1M=1,000k ( $\Omega$ )
- Capacity are in micro-farads ( $\mu$ F) unless specified otherwise.
- All voltage values shown in circuitry are under no signal condition and playback mode with volume control at minimum position otherwise specified.
- ( ) ..... Voltage values at recording mode.
- For measurement us EVM.
- Important safety notice  
Components identified by  $\Delta$  mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

Part No.	Original Part No.	Supply Part No.
IC551, 552	M5218AL	M5218L

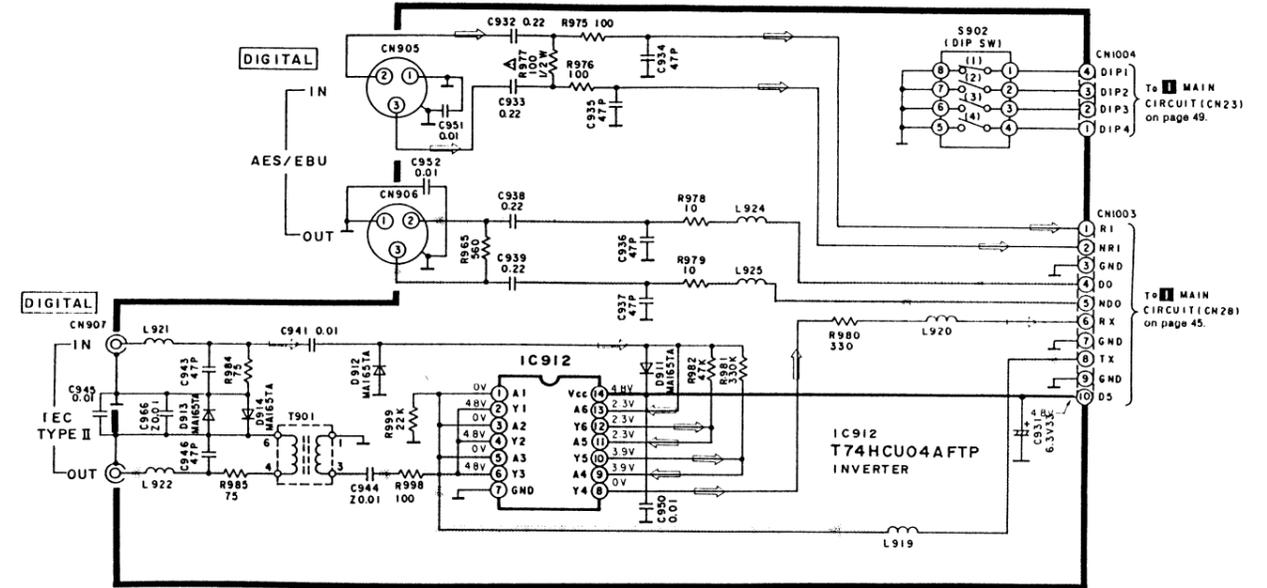

- ( ——— ) Indicates +B (bias).
- ( - - - ) indicates -B (bias).
- (  $\rightarrow$  ) Indicates the flow of the playback signal.
- (  $\Rightarrow$  ) Indicates the flow of the recording signal.

### \* Caution!

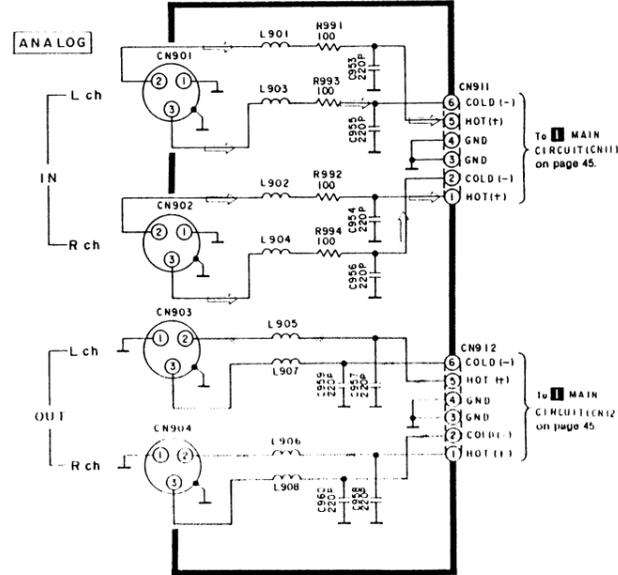

- IC and LSI are sensitive to static electricity. Secondary trouble can be prevented by taking care during repair.
- \* Cover the parts boxes made of plastics with aluminum foil.
- \* Ground the soldering iron.
- \* Put a conductive mat on the work table.
- \* Do not touch the legs of IC or LSI with the fingers directly.

Note 3:

- S1 : Power switch (POWER).
  - S2 : Voltage selector switch.
  - S601 : Sampling frequency selector switch. (SAMPLING FREQUENCY) (44.1kHz → 48kHz).
  - S602 : Input selector switch (INPUT) (DIGITAL/ANALOG).
  - S611 : ID erase switch (ID ERASE).
  - S612 : End search switch (END SEARCH).
  - S613 : Start ID switch (START ID).
  - S614 : Skip ID switch (SKIP ID).
  - S615 : End switch (END).
  - S616 : Counter reset switch (COUNTER RESET).
  - S617 : Renumber switch (RENUMBER).
  - S618 : Rew/rev switch (REW/REV).
  - S619 : FF/cue switch (FF/CUE).
  - S620 : Fade out switch (FADE OUT).
  - S621 : Fade in switch (FADE IN).
  - S622 : PNO/start ID auto switch (PNO/START ID AUTO).
  - S623 : Counter mode switch (COUNTER MODE).
  - S624, 625 : Skip switches (SKIP). [S624 ◀◀, S625 ▶▶]
  - S626 : Pause switch (PAUSE).
  - S627 : Record switch (REC).
  - S628 : Auto rec mute switch (AUTO REC MUTE).
  - S630 : ID write switch (ID WRITE).
  - S631 : Play switch (PLAY).
  - S632 : Stop switch (STOP).
  - S633 : Skip play cancel switch (SKIP PLAY CANCEL).
  - S634 : Music scan switch (MUSIC SCAN).
  - S635 : Open/close switch (OPEN/CLOSE).
- All voltage values shown in circuitry are under no signal condition and playback mode with volume control at minimum position otherwise specified.  
( ).....Voltage values at recording mode.  
For measurement us EVM.
- Important safety notice  
Components identified by Δ mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.
- ( — ) Indicates +B (bias).
  - ( - - - ) Indicates -B (bias).
  - ( ⤴ ) Indicates the flow of the playback signal.
  - ( ⤵ ) Indicates the flow of the recording signal.

# ■ TROUBLESHOOTING

## ■ ABOUT THE ERROR RATE

If the error rate is normal, it can be judged that everything up to signal processing, meaning the operation of the RF head mechanism, is normal.

Thus, when there is a problem with playback, if the error is normal, it can be assumed that the origin of the problem is in the analog system.

## ■ ABOUT THE LEVEL METER

Just as for the error rate, if the level meter is operating normally, it indicates that the signal is reaching signal processing.

In other words, if there is no problem with the level meter during playback, it indicates that the head and the RF are outputting the signal.

In addition, if there is no problem with the level meter during recording, it indicates that the analog system (input amplifier and AD) is functioning normally.

## ■ ERROR RATE DISPLAY FUNCTION

### 1. Setting the error rate display mode

Simultaneously press the counter mode key, the counter reset key, and the pause key.

#### Note:

If the counter reset key is released before the other keys, the mode will not change to the error rate display mode.

(1) The digital input mode will be displayed:

If "AES" is displayed, it indicates the AES/EBU mode. If "IEC-2" mode is displayed, it indicates the IEC Type II mode.

### 2. Changing to the following displays

Press the counter mode key successively.

(2) The error rates for head A and head B will be displayed: FLs A and B will light up (max 9984).

(3) The error rate for head A will be displayed: FL A will light up (max 4992).

(4) The operation modes for the system control (left) and the mechanism control (right) will be displayed.

(5) The error codes for the system control (left) and the mechanism control (right) will be displayed. (If the tray is open, the error codes will be cleared.)

(6) The display will return to (1).

### 3. Returning to the normal mode

Press the counter reset key: the mode will change to the A time display mode.

## ■ KEY POINTS FOR TROUBLESHOOTING

### Mechanism block

Loading mechanism  
   Post roller  
   Tension regulator  
   Pinch roller  
   Brake lever  
 Brake mechanism  
   Brake lever  
   Solenoid  
   Solenoid driver  
 Mechanism switch block  
   Tape hole detection switch  
   Cassette detection switch  
   Holder switch  
 Reel FG block  
   Detection photo transistor  
   Detection LED  
   Reel FG amp (servo P.C.B.)  
 FPC & FPC connector

### Power supply block

Power supply regulator output  
 Fuse

### Capstan block

Capstan FG  
 FG amp  
 Motor driver output  
 Motor current

### Cylinder block

Cylinder FG  
 Cylinder PG  
 FG amp  
 PG amp  
 Motor driver output  
 Motor current

### Mode motor block

Mode motor  
 Mode switch  
 Mode motor driver circuit

### ATF block

RF ATF output  
   ATF SYNC output  
 ATF select circuit  
 ATF gate allay

### Master clock block

28MHz oscillator  
 16MHz, 22MHz, 24 MHz oscillate and select circuit

### Signal processor block

Data & clock to D/A  
 Data & clock to A/D  
 All clocks

### Panel switch block

Switch  
 Panel control IC

### Digital output block

Digital output PB

### Head, RF block

Head FPC & FPC connector  
 Head dirty  
 Head cracked or damaged  
 RF recording current  
 Playback eye pattern

### Panel control block

Panel control block  
 Transfer between panel and system control  
 Panel control reset

### Tape begin/end detection block

Begin/end detection photo transistor  
 Begin/end detection LED  
 Comparator circuit  
 FPC & FPC connector

### Analog block

Input amplifier  
 Output amplifier  
 Muting circuit  
 A/D converter  
 D/A converter

## REPLACEMENT PARTS LIST

**Notes :** \* Important safety notice:

 Components identified by  $\Delta$  mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.

 \* The parenthesized indications in the Remarks columns specify the areas. (Refer to the cover page for area.)  
 Parts without these indications can be used for all areas.

Ref. No.	Part No.	Part Name & Description	Remarks	Ref. No.	Part No.	Part Name & Description	Remarks

## ■ ERROR CODE TABLE

Error code (Note. 1)	System control error code		Mechanism control error code	
	Processing (Note 2)	Contents	Processing (Note 2)	Contents
1	Test operation	R3CP clock malfunction	Unload	Mechanism mode switching lock
2	Test operation	HSW clock malfunction	Unload	Tape loading lock
3	Transmission omitted	Faulty transmission of the mechanism control	Unload	Capstan unlock
4	Unload	Still protection during operation	Unload	Cylinder unlock
5	Unload	Broken tape	Unload	Reel unlock
6	Unload	Faulty transmission of SP1	Unload	Sum of reel cycles cannot be measured.
7			Unload	In-cassette rewind time exceeded.
8			Unload	Slack tape-up time exceeded.
9			Unload	Tape jamming (Supply side)
A			Unload	Tape jamming (Take-up side)
B (-)			Unload	Gear does not engage.
C			Tray stop	Initial tray setting not possible.
O		—		No error
FF (blank)		No error		—

### Note 1: Display mode

E	X1	X2
---	----	----

- E: Indicates that mode is the error rate display mode.  
 X1: System control error code  
 X2: Mechanism control error code

### Note 2: Processing when an error occurs

#### Test operation:

Internal clock of the system control temporarily connects for operation.

#### Transmission omitted:

Transmission processing stopped.

#### Unload:

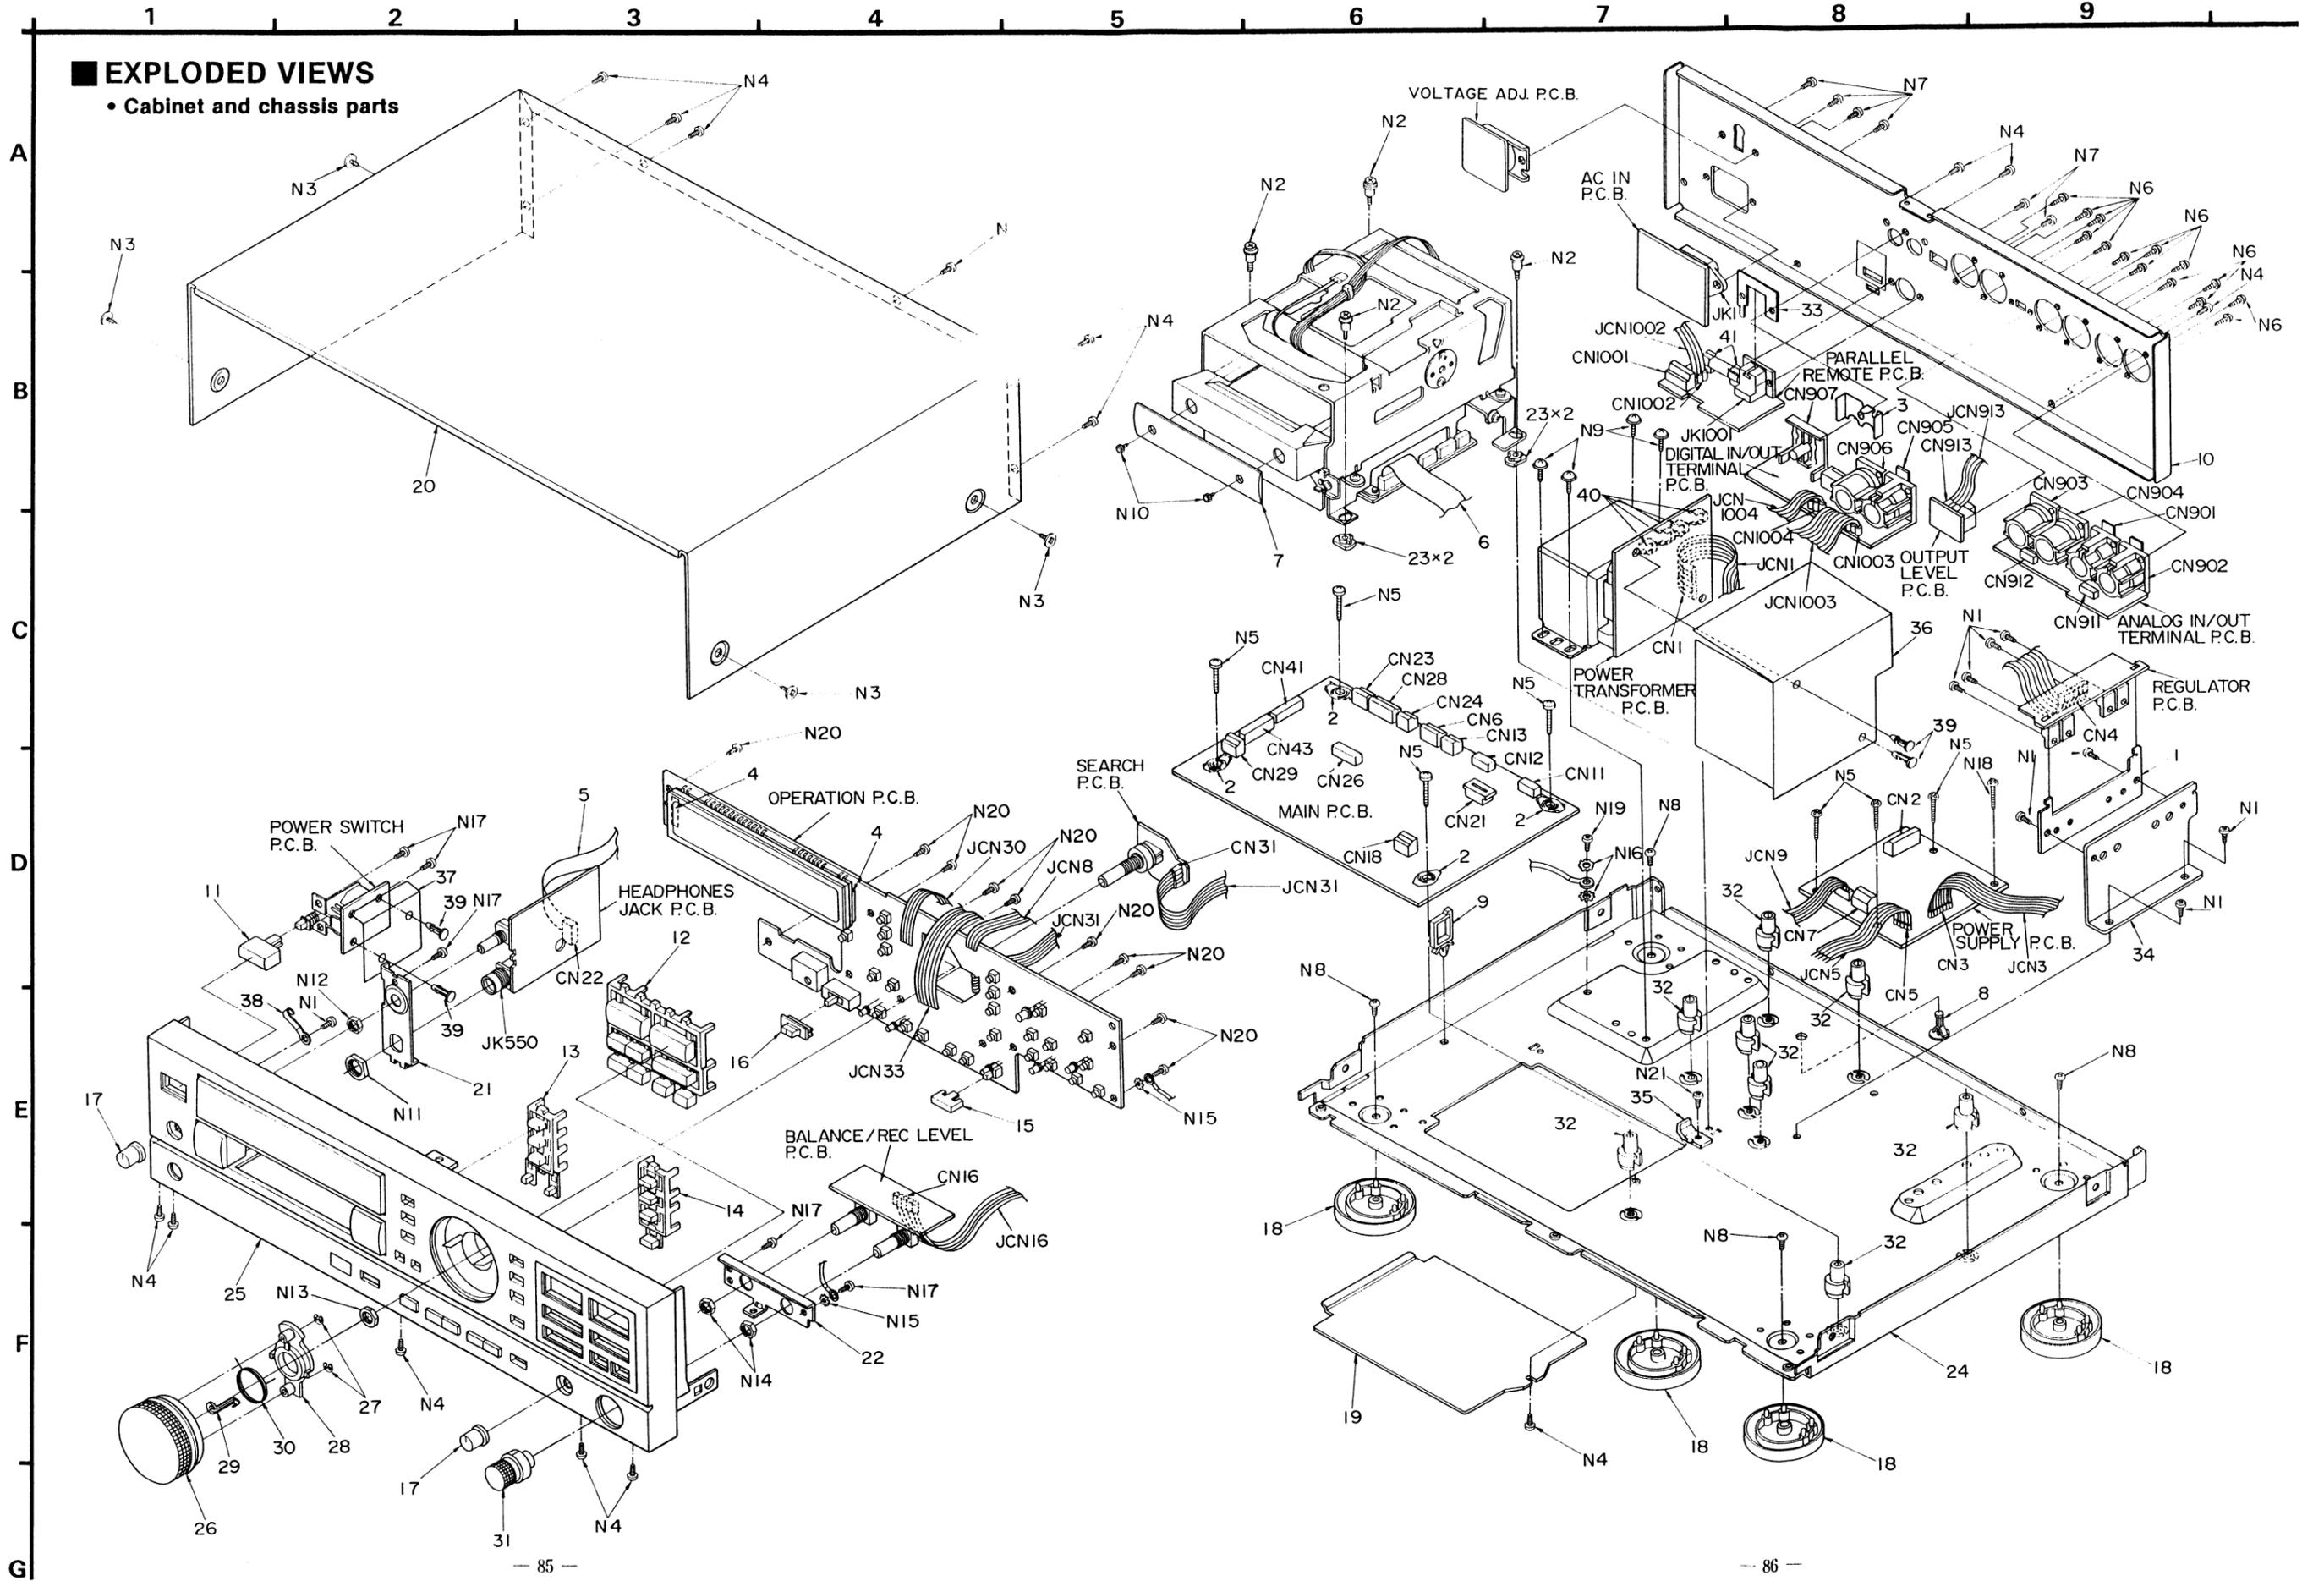

Tape is unloaded.

## REPLACEMENT PARTS LIST

Notes : \* Important safety notice:

Components identified by  $\Delta$  mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.

\* The parenthesized indications in the Remarks columns specify the areas. (Refer to the cover page for area.) Parts without these indications can be used for all areas.

## Distinguishing by Serial No. Suffix

A. Suffix of a set with Old type remote sensor used in it

Serial No.:

"F" ..... Old type remote sensor  
Product manufactured in Nov., '94 or before

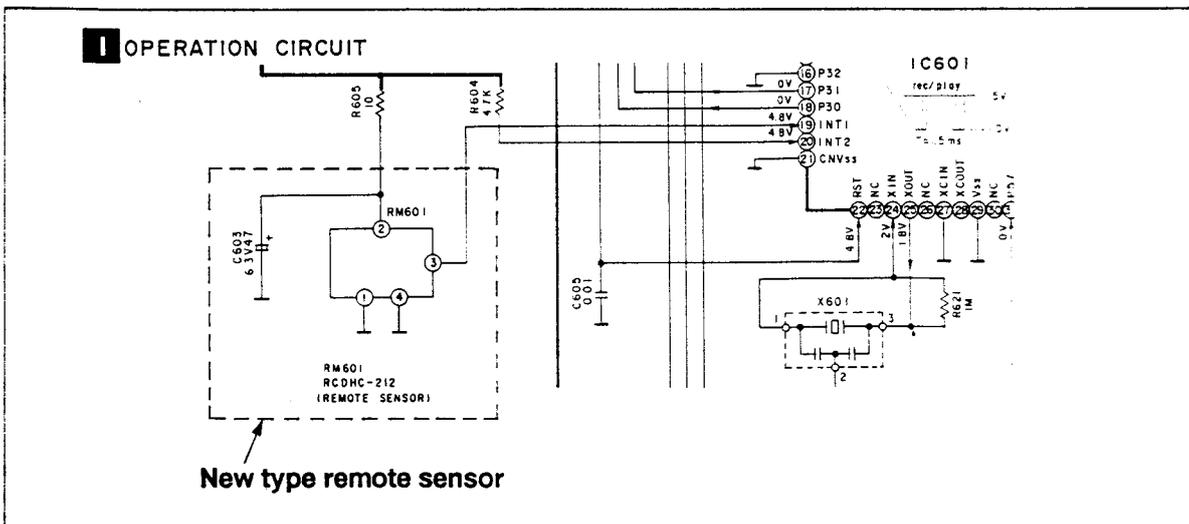

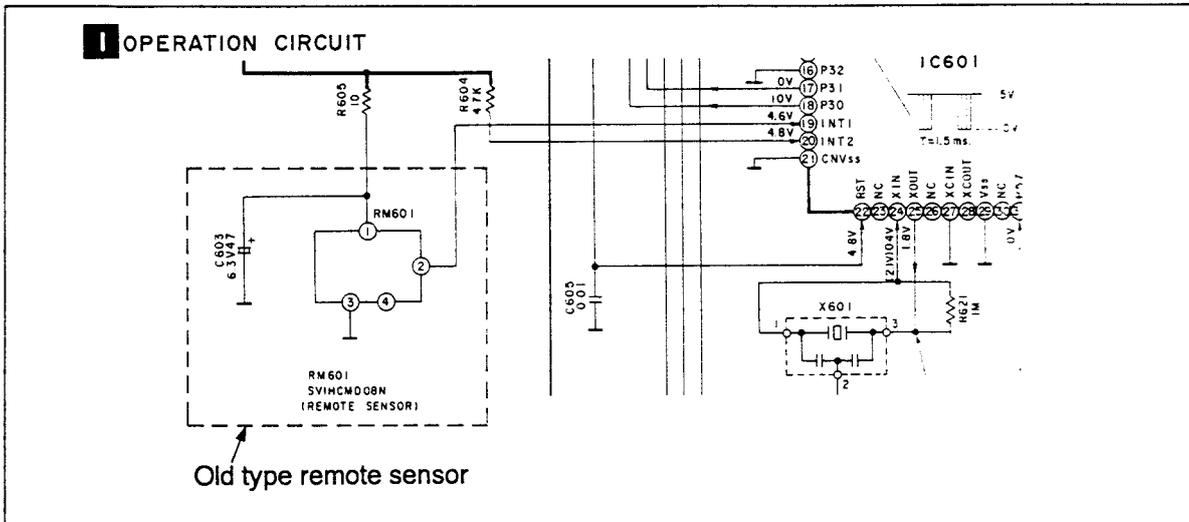

B. Suffix of a set with New type remote sensor used in it

Serial No.:

"G" ..... New type remote sensor  
Product manufactured in Dec., '94 onward

## SCHMATIC DIAGRAM (SV-3700 Service Manual on page 59.)

# Service Manual

Professional Digital Audio Tape Deck

## SV-3700

**Supplement**

Colour

(H).....Gray Type

Please file and use this supplement manual together with the service manual for Model No. SV-3700, Order No. AD9010314C2.

Area

Suffix for Model No.	Area	Colour
(EB)	Gerat Britain.	(H)
(EG)	Europe.	

### CHANGES

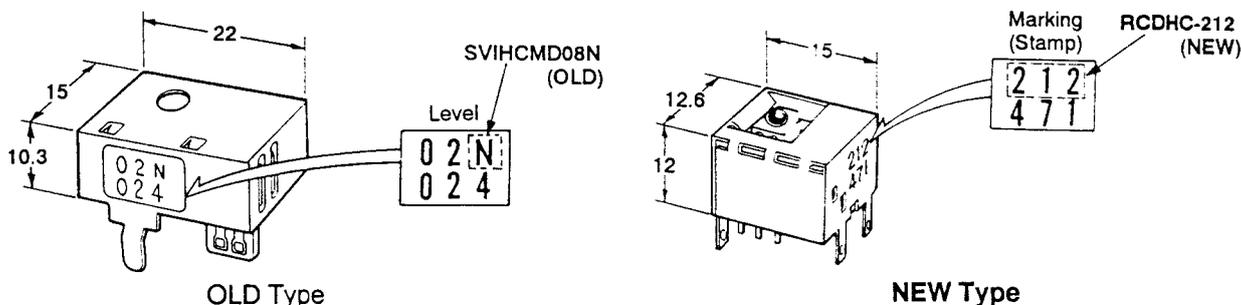

■ We inform you that the remote sensor used for the subject model has been changed since midway of production.

### ■ REPLACEMENT PARTS LIST (SV-3700 Service Manual on page 84.)

Ref. No.	Parts No.		Part Name & Description	Remarks
	OLD	NEW		
RM601	SVIHCMD08N	RCDHC-212	REMOTE SENSOR	

**NOTE:** When replacing the remote sensor of a set during service work, check if the type of the remote sensor is New or Old and use a replacement remote sensor of the same type.

### ■ How to distinguish between New type and Old type remote sensors.

**△ WARNING**  
 This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

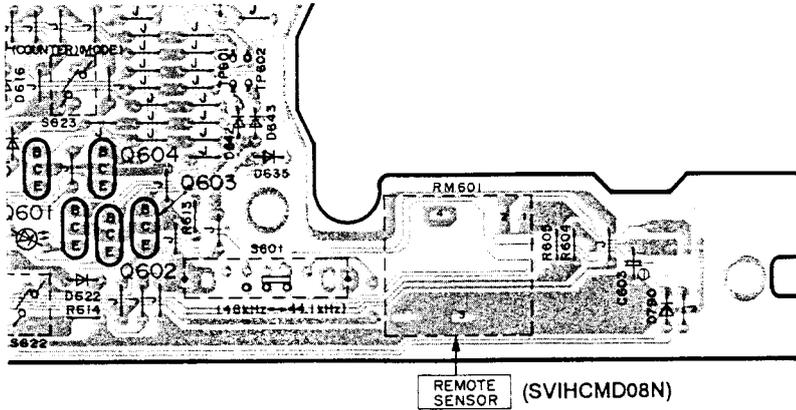

**PRINTED CIRCUIT BOARDS** (SV-3700 Service Manual on page 72.)

There are 2 types of PC boards used for Model SV-3700, P.C.B 1 and P.C.B 2.

**I OPERATION P.C.B. (REP1952A)**

Remote sensors mounted to Type 1 PC boards are Old type remote sensors only.

P.C.B 1

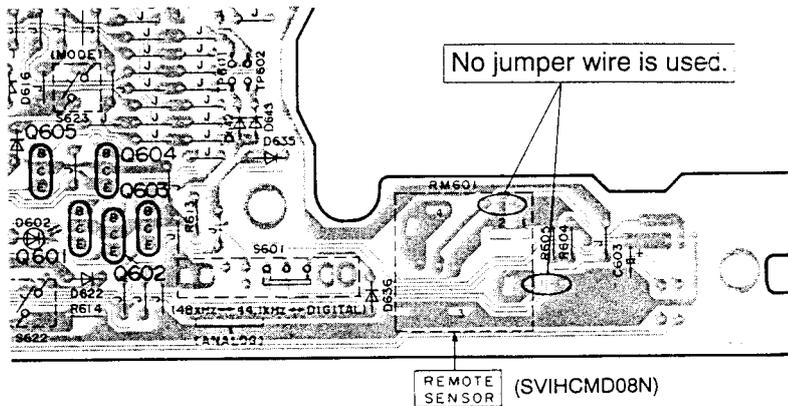

REMOTE SENSOR (SVIHCMD08N)

**I OPERATION P.C.B. (REP1952A)**

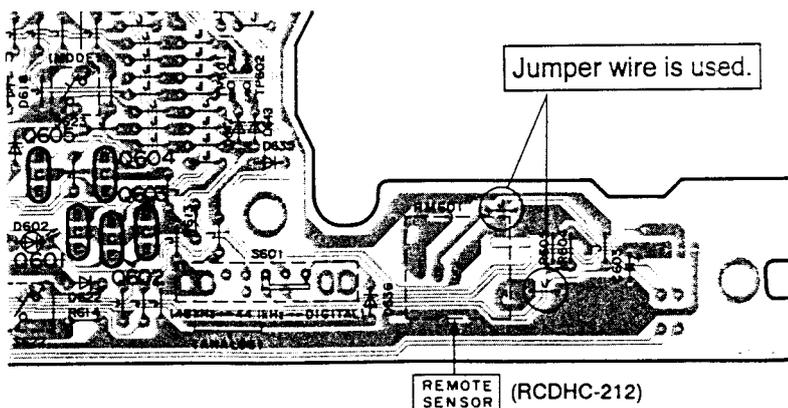

**NO JUMPER WIRE IS USED** ..... Old type remote sensor is used.

P.C.B 2

REMOTE SENSOR (SVIHCMD08N)

**JUMPER WIRE IS USED** ..... New type remote sensor is used.

REMOTE SENSOR (RCDHC-212)
