NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

During repair, pay attention to electrostatic breakdown and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

SERVICING NOTE

Flexible Circuit Board Repairing

- Keep the temperature of the soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

Notes on chip component replacement

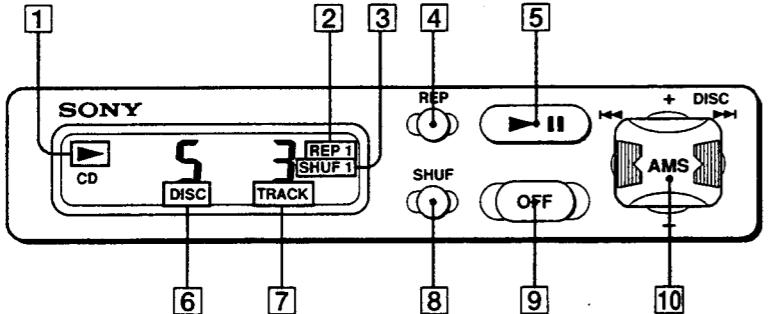

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

This section is extracted from instruction manual.

Connections

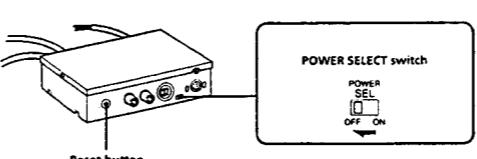

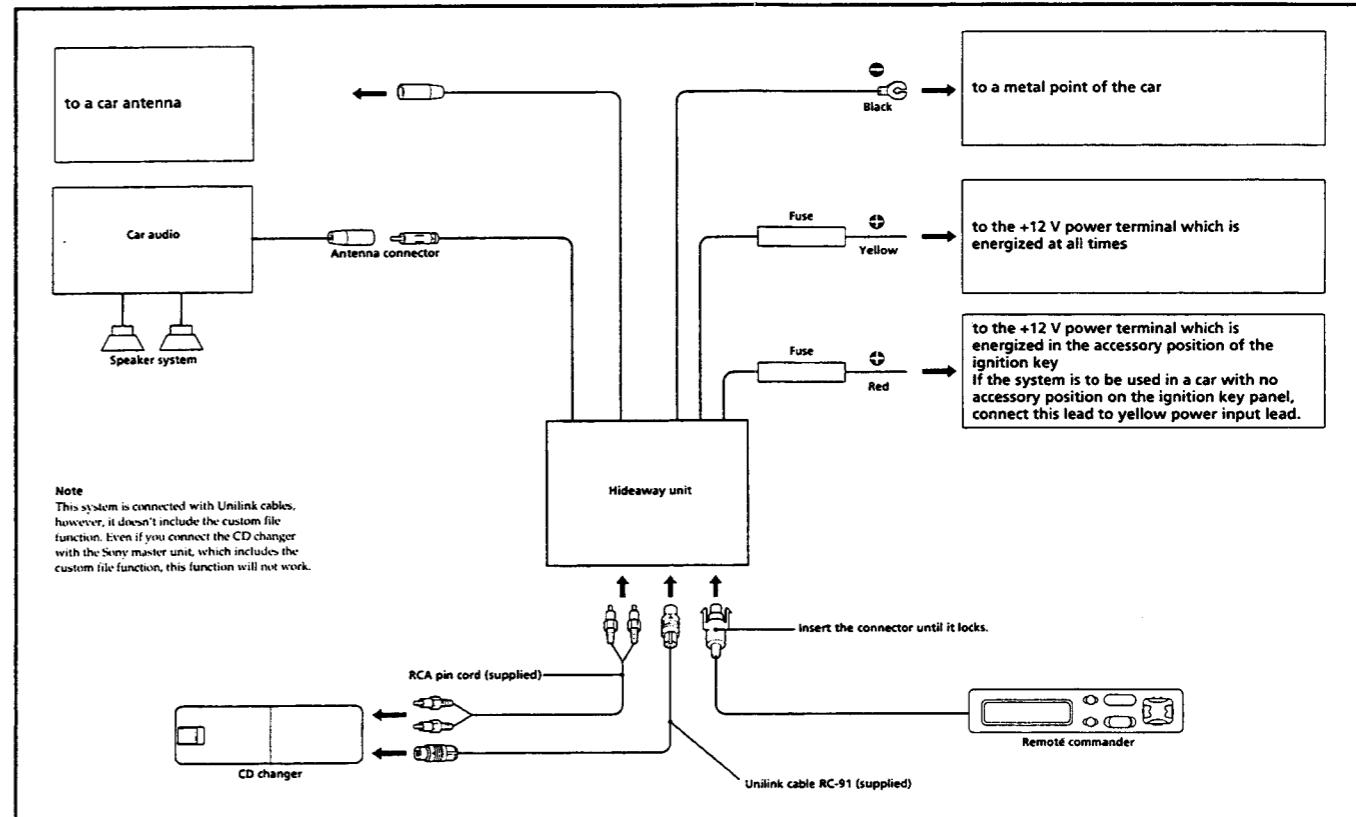

Caution

- This system is designed for negative ground 12 V DC operation only.
- Before making connections, disconnect the ground terminal of the car battery to avoid short circuits.
- Connect the yellow and red power input leads only after all other leads have been connected.
- Be sure to connect the red power input lead to the positive 12 V power terminal which is energized when the ignition key is in the accessory position.
- Run all ground wires to a common ground point.
- Press the reset button on the hideaway unit after completing the connections.

Fuse Replacement

- If the fuse blows, check the power connection and replace the fuse. If the fuse blows again after replacement, there may be an internal malfunction.

Warning
Use the specified amperage fuse.
Use of a higher amperage fuse may cause serious damage.

Installing the System in a Car without Accessory Position

POWER SELECT switch setting

When this system is to be installed in a car with no ACC (accessory) position on the ignition panel, set the POWER SELECT switch on the front side of the hideaway unit to the OFF position. After the switch has been set, the power supply to this system will be turned off whenever the OFF button on the remote commander is pressed while the system is operating. However, when you turn off the ignition of your car, be sure to turn off the power supply by pressing the above mentioned button in order to conserve the car battery. (If you use this system with the POWER SELECT switch set to the ON position in a car with no accessory position, the OFF button will not turn off the power supply to the whole system.)

When you change the setting of the POWER SELECT switch, be sure to press the reset button on the hideaway unit with a ball-point pen etc.

3-1. ELEVATOR HEIGHT ADJUSTMENT

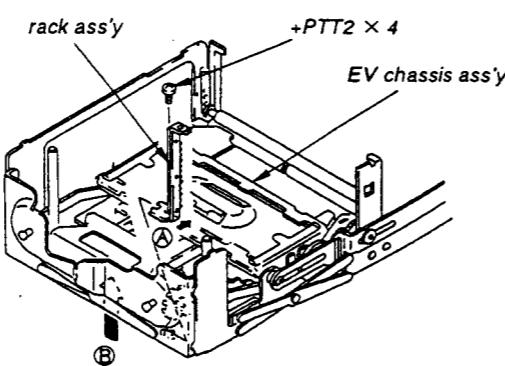

This adjustment should be done when replacing the rack assembly on the parts related to it.

Procedure :

- Fit the EV gear assembly after adjusting its slit position as shown in the figure. (When the slit position is out of order after fitting, it can be adjusted finely by turning the worm gear of the ELV motor.)

- Fit the rack assembly putting it in the arrow Ⓐ direction. At this time insert a spacer (approx. 1 mm thickness) or fit the rack assembly while pushing the EV chassis assembly in the arrow Ⓑ direction.

Note : When this adjustment is out of order, it doesn't operate normally and the roaring of the motor can be heard. In this case adjust again.

DRIVER BOARD IC501 (BA6247N) MOTOR DRIVER IC OPERATION

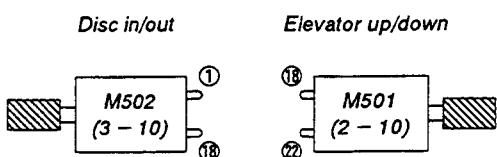

The elevator motor connected between Pin ⑩ and Pin ⑫ of IC501 is as M501, and the disc loading/saving motor connected between Pin ① and Pin ⑩ of IC501 is as M502.

When the IC port logic is Pin ⑫ > Pin ⑩, Pin ① > Pin ⑩, the rotating direction of M501 and M502 becomes normal.

ROTATION TRUTH TABLE

- ① When MB = MC, both M501 and M502 are stop. (MA value is free.)
- ② When MB ≠ MC:

MA Pin ⑧	MB Pin ⑥	MC Pin ⑤	M501	M502	Motor Terminal			Operation
