### SPECIFICATIONS

System	Compact disc digital audio system
Laser	Semiconductor laser ( $\lambda = 780 \text{ nm}$ )
	Emission duration: continuous
Laser output	Max. $44.6 \mu\text{W}$ * This output is the value measured at a distance of about 200 mm from the objective lens surface on the Optical Pick-up Block.
Signal to noise ratio	More than 90 dB
Dynamic range	More than 90 dB
Harmonic distortion	Less than 0.05% (at 1 kHz)
Channel separation	More than 90 dB
Output level	2 V (at 50 kilohms)
Load impedance	More than 10 kilohms
Outputs	DIGITAL OUT OPTICAL (optical output connector): wave length 660 nm, output level -18 dBm

CLASS 1 LASER PRODUCT  
LUOKAN 1 LASERLAITE  
KLASS 1 LASERAPPARAT

This appliance is classified as a CLASS 1 LASER product. The CLASS 1 LASER PRODUCT label is located on the rear exterior.

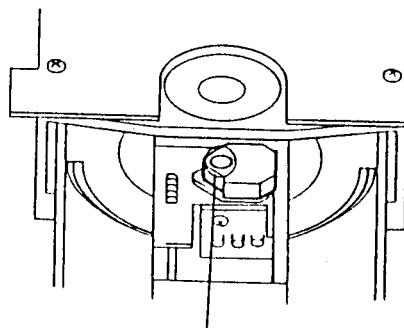

COMPACT DISC PLAYER  
**SONY**®

MICROFILM

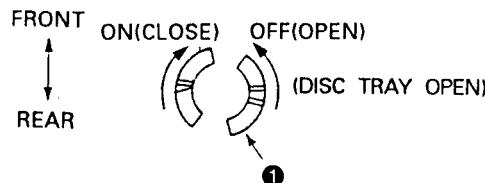

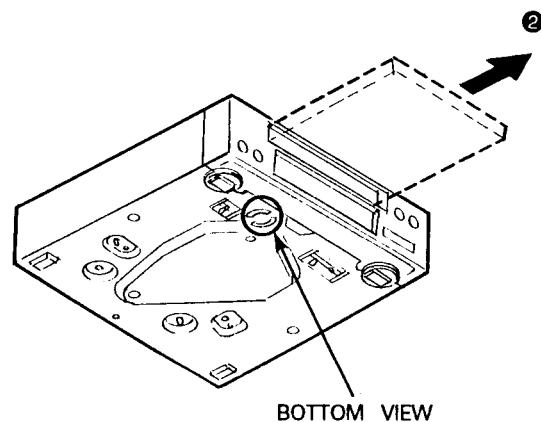

## LASER DIODE AND FOCUS SERCH OPERATION CHECK

1. Make POWER switch on with no disc inserted and disc table closed.
2. Confirm that the following operation is performed while observing the objective lens.

- ① Confirm that laser beam is spread.
- ② Up and down motion of the objective lens. (3 times)

## HOW TO OPEN THE DISC TRAY WHEN POWER SWITCH TURNS OFF

- (1) Insert to ① for tapering driver, etc., and turn in the direction of arrow OFF. (Disc tray open)
- (2) Tray as come out little of front panel, pull out in the direction of arrow ② by hand.

## NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic break-down because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body. During repair, pay attention to electrostatic break-down and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

## NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe from more than 30 cm away from the objective lens.

## SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK  $\Delta$  OR DOTTED LINE WITH MARK  $\Delta$  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

## SECTION 2

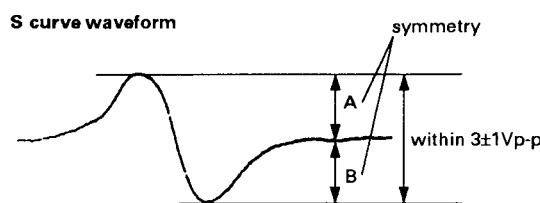

### ELECTRICAL BLOCK CHECKING

**Note :**

1. CD Block basically constructed to operate without adjustment. Therefore, check each item in order given.
2. Use YEDS-18 disc (3-702-101-01) unless otherwise indicated.
3. Use the oscilloscope with more than  $10M\Omega$  impedance.
4. Clean an object lens by an applicator with neutral detergent when the signal level is low than specified value with the following checks.

**S Curve Check****Procedure :**

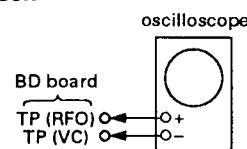

1. Connect oscilloscope to test point TP (FEO) on BD board.
2. Connect between test point TP (FES) and TP (VC) by lead wire.
3. Turned Power switch on and actuate the focus serch. (actuate the focus serch when disc table is moving in and out.)
4. Check the oscilloscope waveform (S curve) is symmetrical between A and B. And confirm peak to peak level within  $3 \pm 1V_{p-p}$ .

5. After check, remove the lead wire connected in step 2.

**Note :**

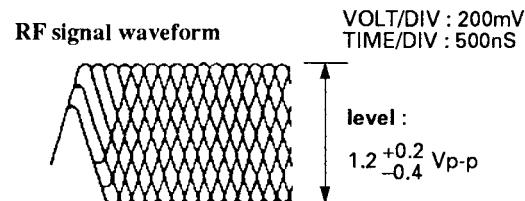

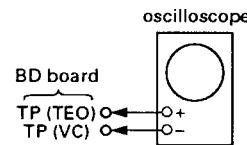

- Try to measure several times to make sure that the ratio of A : B or B : A is more than 10 : 7.
- Take sweep time as long as possible and light up the brightness to obtain best waveform.

**RF Level Check****Procedure :**

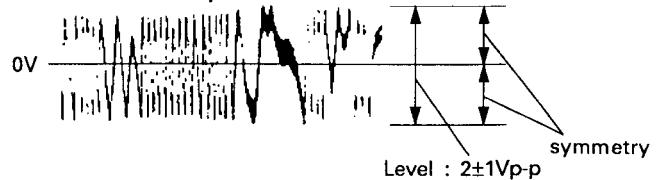

1. Connect oscilloscope to test point TP (RFO) on BD board.
2. Turn Power switch on.
3. Put disc (YEDS-18) in and playback.
4. Confirm that oscilloscope waveform is clear and check RF signal level is correct or not.

**Note :**

Clear RF signal waveform means that the shape “◊” can be clearly distinguished at the center of the waveform.

**E-F Balance Check****Procedure :**

1. Connect test point TP (ADJ) to ground and TP (TES) to TP (VC) with lead wire.
2. Connect oscilloscope to test point TP (TEO) on BD board.
3. Turn Power switch on.
4. Put disc (YEDS-18) in and playback.
5. Confirm that the oscilloscope waveform is symmetrical on the top and bottom in relation to 0V, and check this level.

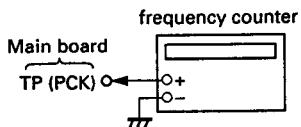

**Traverse oscilloscope**

6. Remove the lead wire connected in step 1.

**RF PLL Free-run Frequency Check**

Procedure :

1. Connect frequency counter to test point (PCK) with lead wire.

2. Turn Power switch on.
3. Confirm that reading on frequency counter is 4.3218MHz.

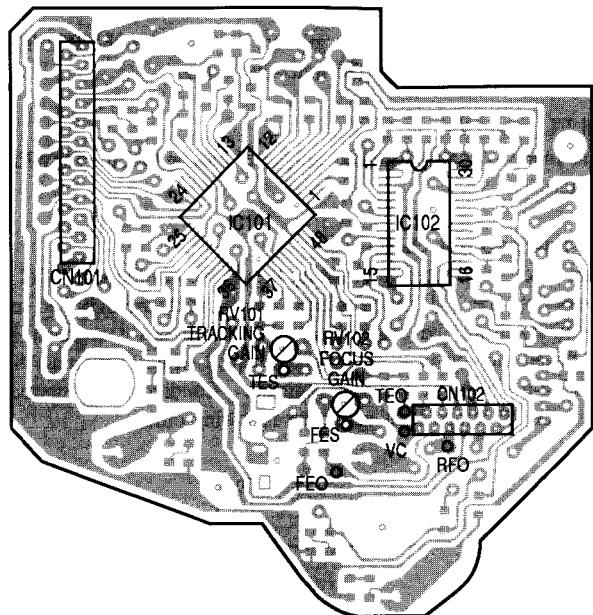

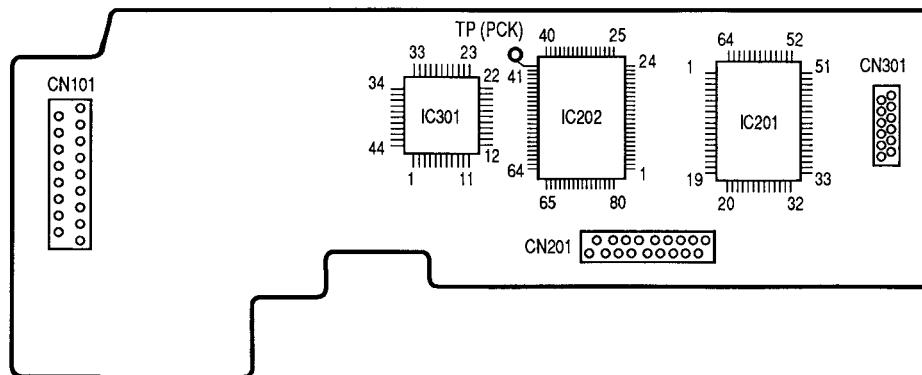

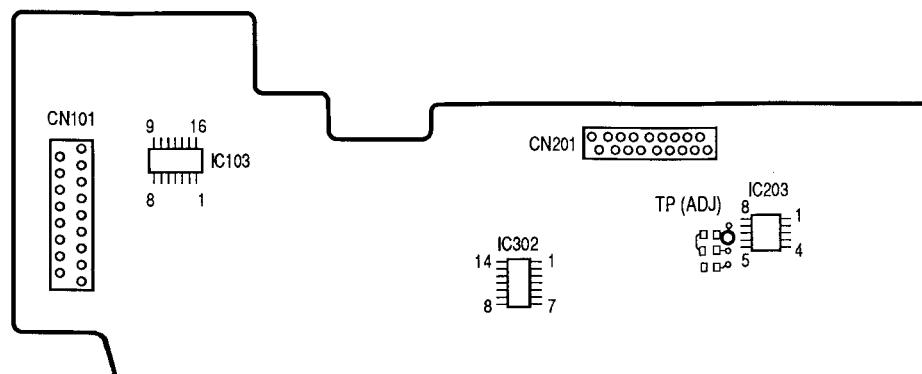

**Focus/Tracking Gain**

This gain has a margin, so even if it is slightly off.

There is no problem.

Therefore, do not perform, this adjustment.

Please note that it should be fixed to mechanical center position when you moved and do not know original position.

**[ BD BOARD ] – Conductor Side –****[ MAIN BOARD ] – Component Side –****[ MAIN BOARD ] – Conductor Side –**

## [ TEST MODES ]

## 1. Test mode of display micon (IC401)

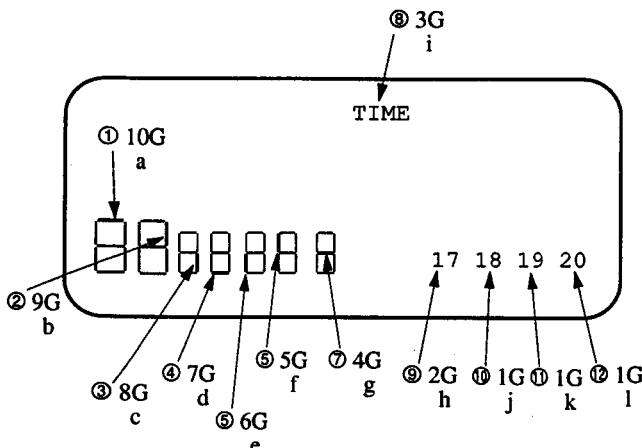

Connect Pin ⑩ of IC401 to ground and turn ON the POWER switch, thus you can test the following 3 tests.

## (1) All FL tube ON

This mode is actuated immediately after turning ON the POWER switch.

## (2) FL tube segment check

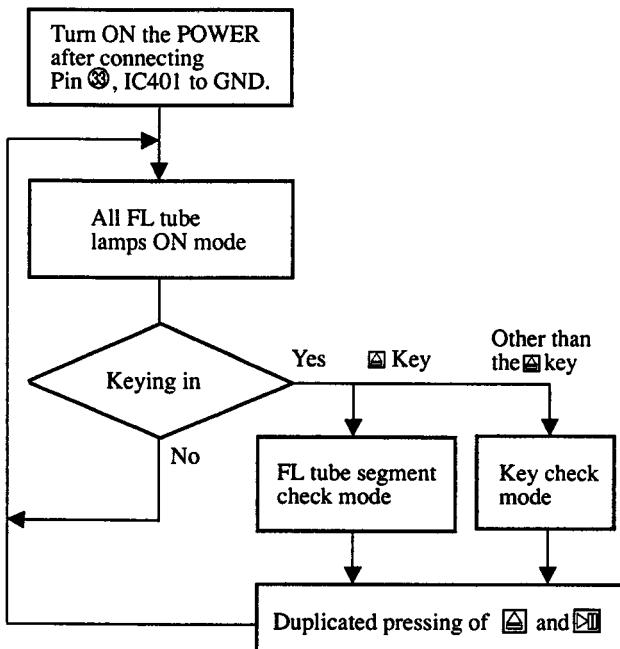

This mode is actuated by pressing the **[A]** key in the state of (1). Every time the **[A]** key is pressed, the segments are indicated sequentially from the segment a. When the last 1 segment is displayed, keying in is no longer accepted while continuing the lighting-up state of the last segment. Conditions are normal provided all lamps light up in the following order.

## (3) KEY check

This mode is effected by pressing the **[A]** key in the state of (1), while indicating "1." Every time a new key is pressed subsequently, the indicated number is incremented. Conditions are normal provided "7" is indicated when all types of keys are pressed. Even if a key is pressed again, it is not counted.

\* To leave the mode (2) or (3), press the **[A]** and **[B]** keys in duplication, thereby the mode returning to all ON mode.

## 2. Test Modes of CD Syscon (IC202)

## (1) ADJUST mode

When this mode is effected, the machine is operated normally except for the following.

- When pin ⑩, IC202 (ADJ) is set to "L" after turning ON the POWER switch:
  1. GFS is no longer monitored during PLAY, PAUSE or SEARCH, while not stopping even with GFS remaining still at "L" (NG).
  2. No high-speed feeding is activated during SEARCH.
  3. Focus gain is reset to normal gain during PLAY (normally, the gain is lowered to reduce noise when FOCUS is locked).
- When Pin ⑩, IC202 (AFADJ) is set to "L" after turning ON the POWER switch:
  1. Regardless of Pin ⑩ (ADJ) of the CLV-S fixed function, the CLV mode during PLAY becomes CLV-S (rough servo) only while Pin e remains "L".

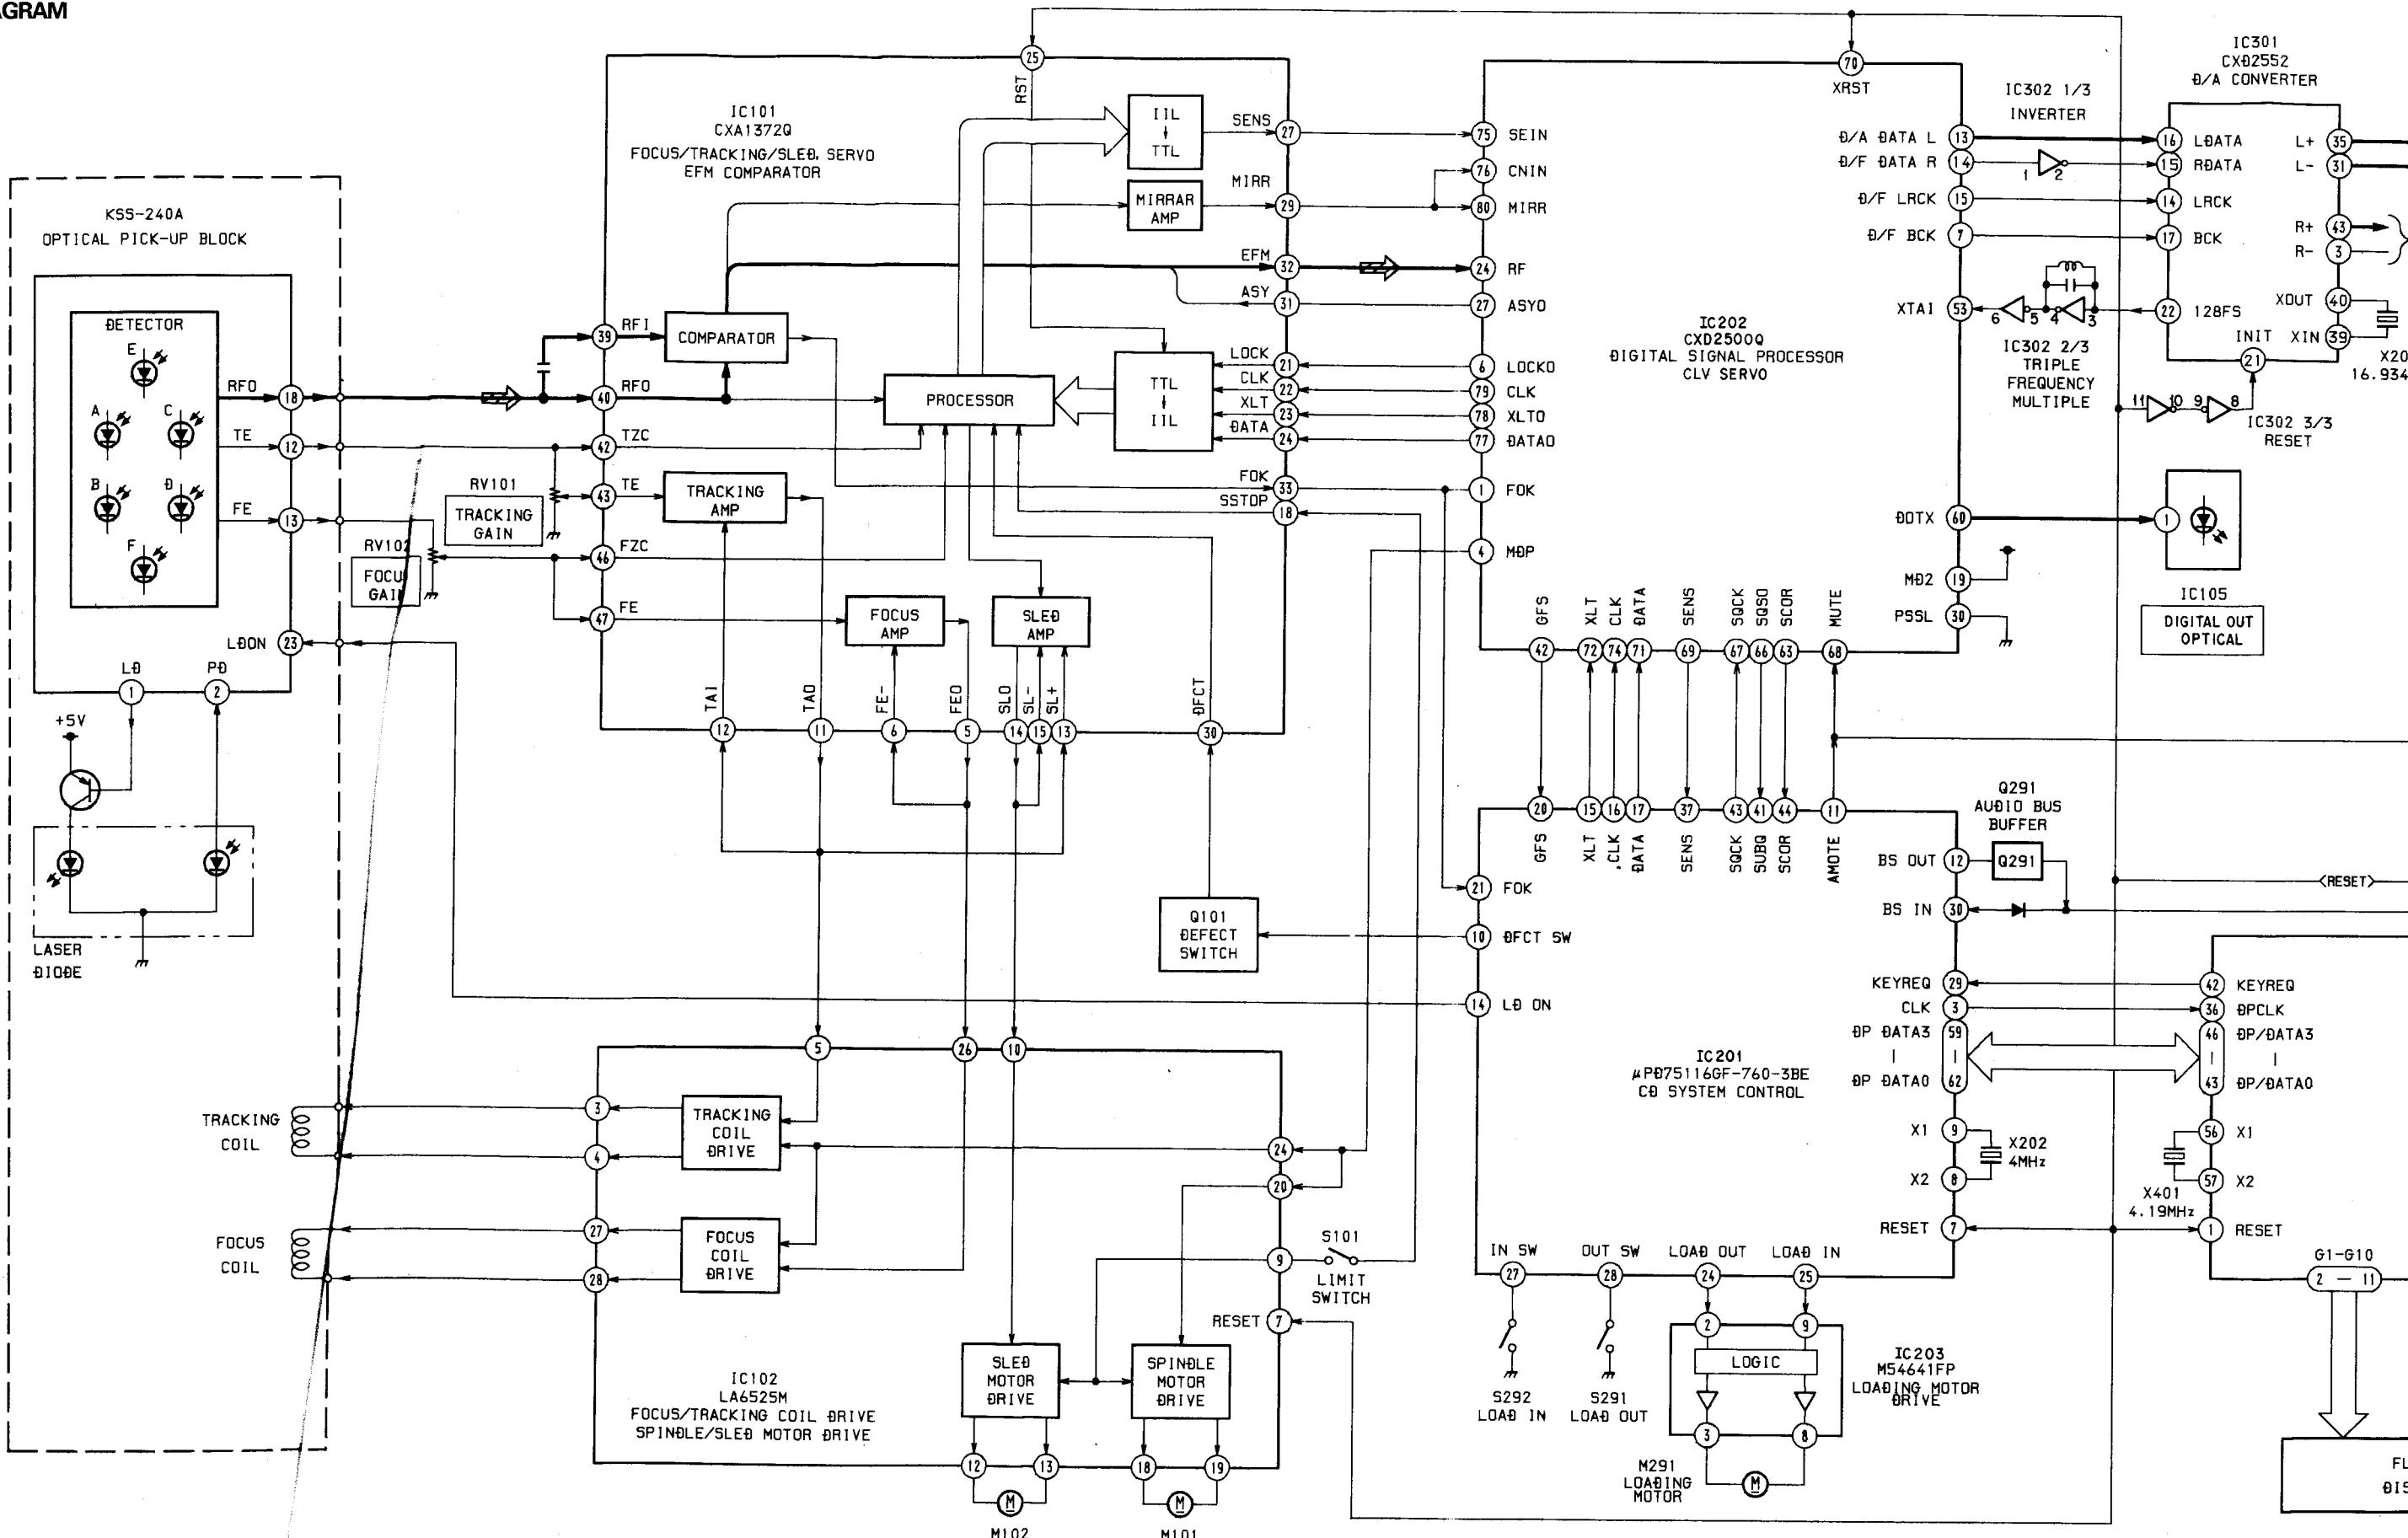

## (2) AFADJUST mode

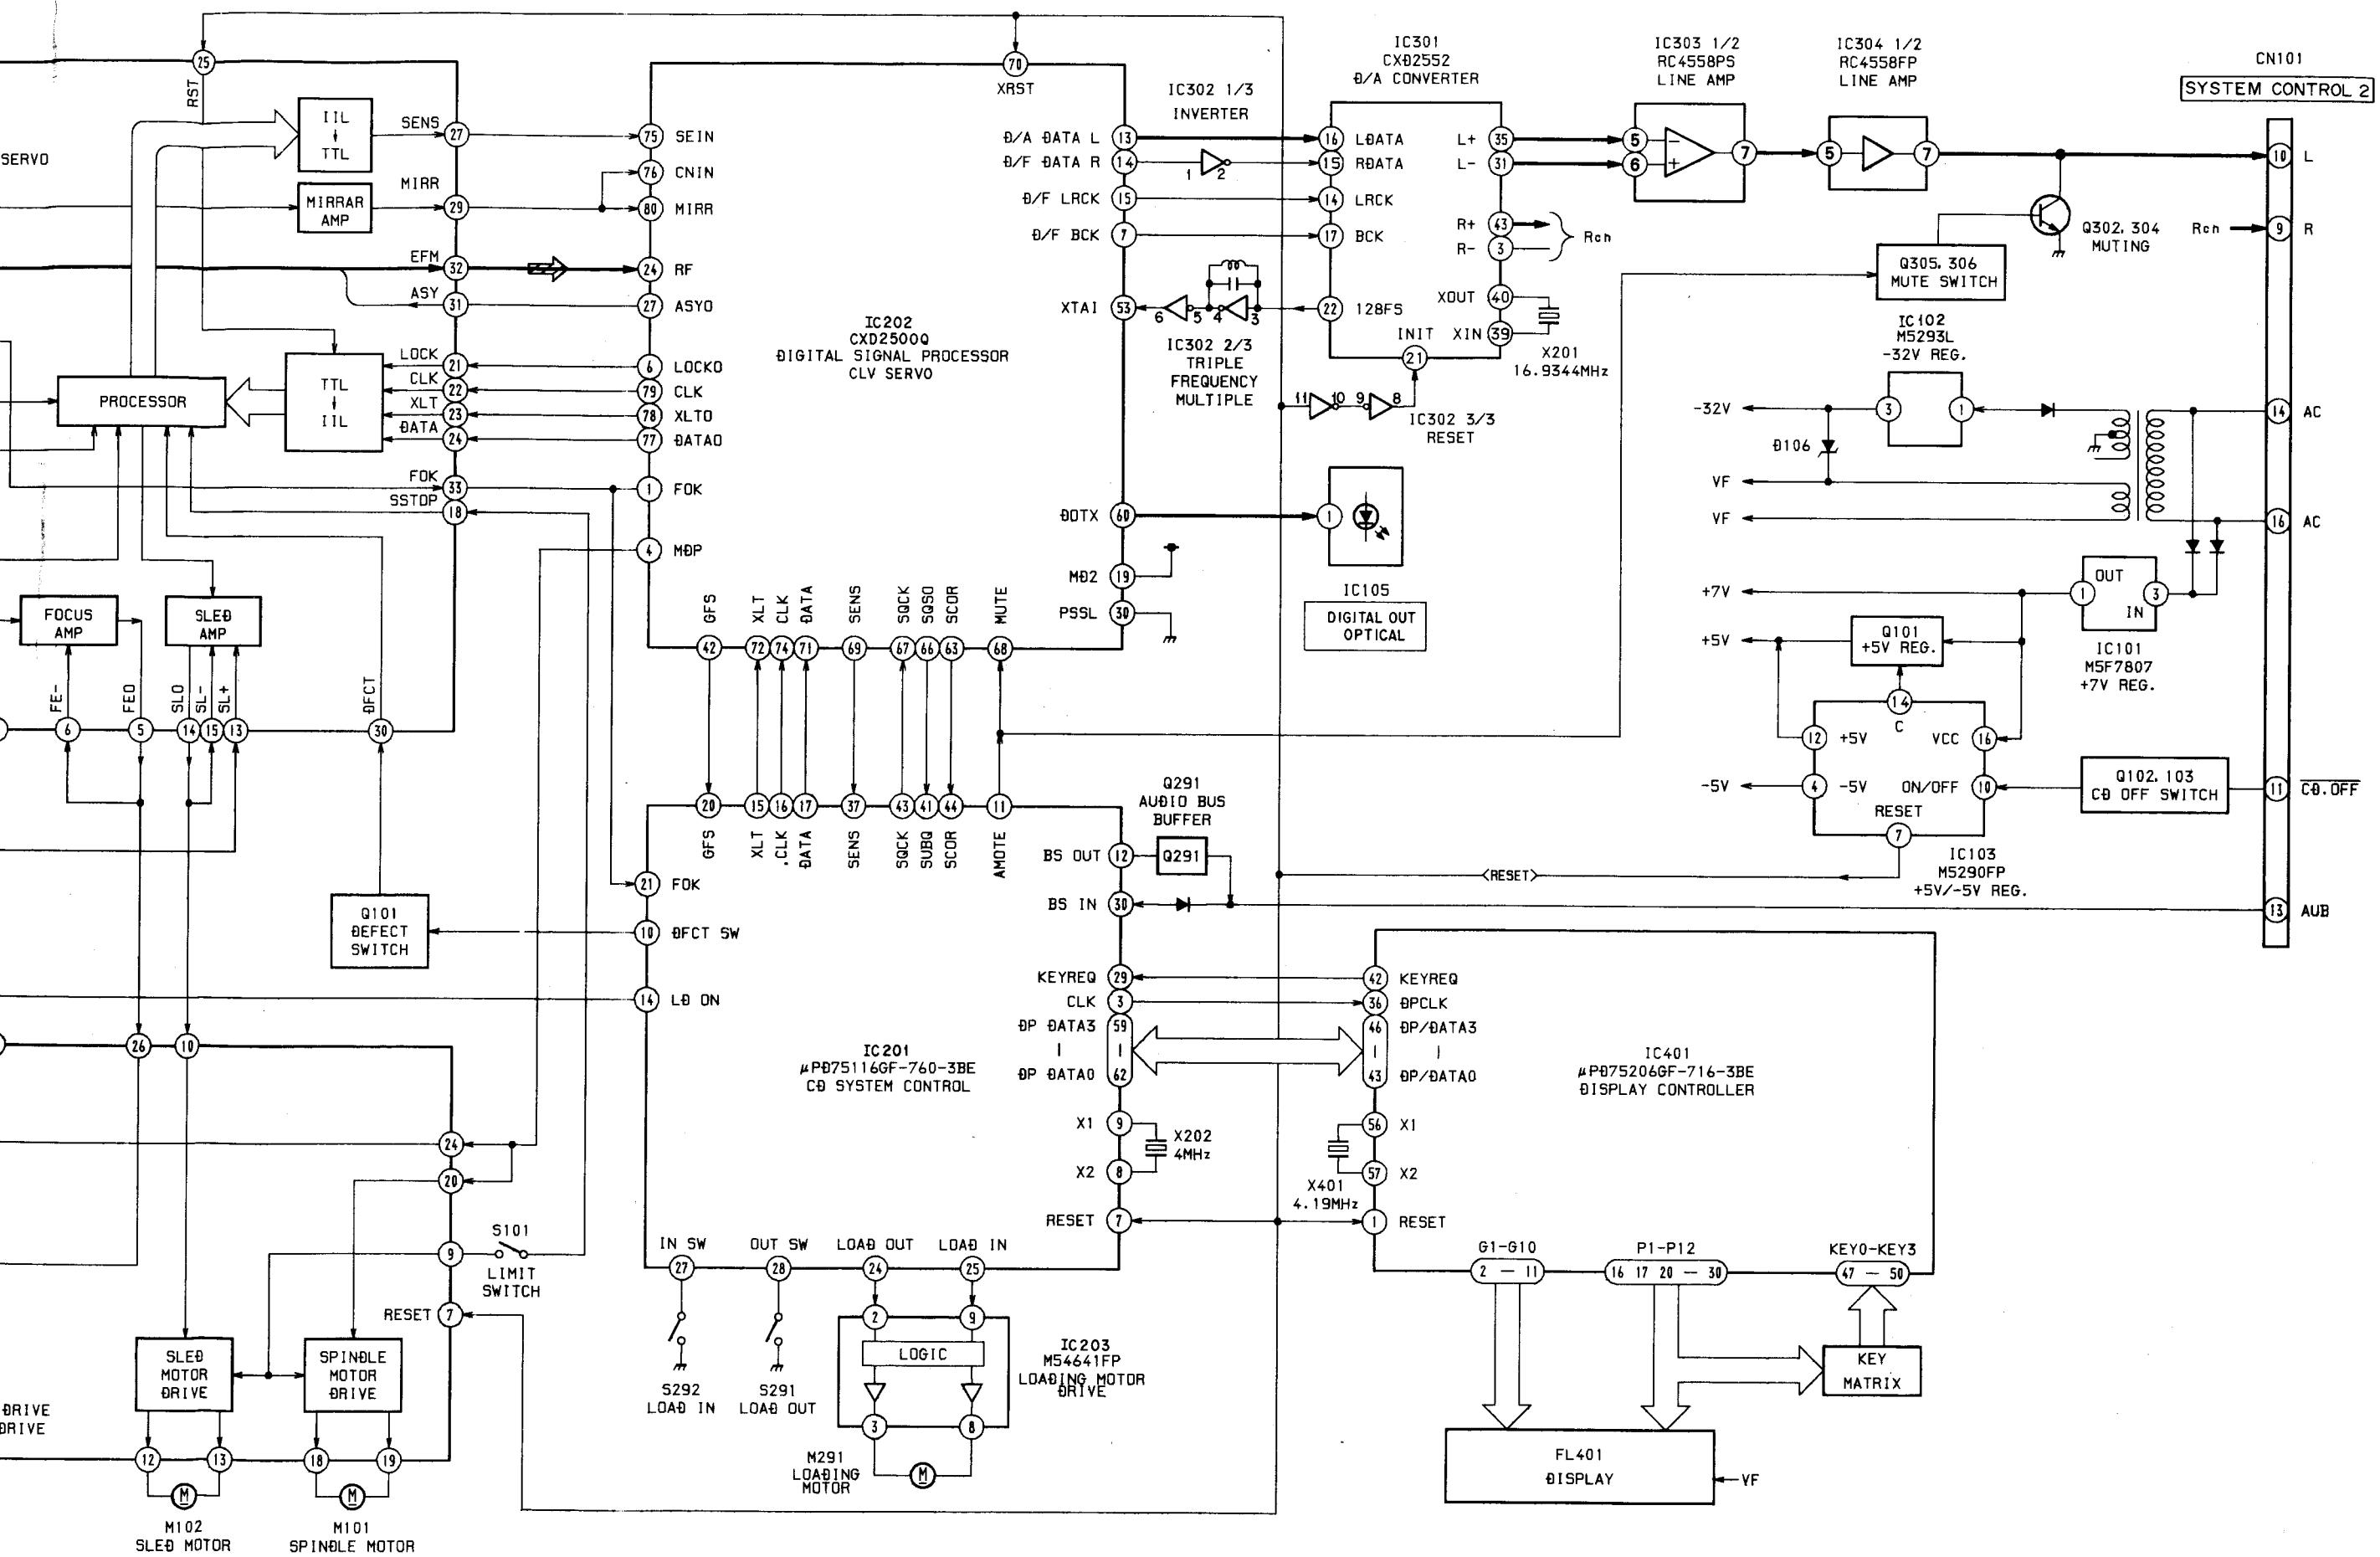

In this mode, it is possible to check the interface between the display micon (IC401) and CD syscon (IC202).

- Set Pin ⑩, IC202 (AFADJ) to "L" before turning ON the POWER switch.
  1. Every time the **[A]** key is pressed after turning On the POWER switch, indication on the FL tube is switched correspondingly. Conditions are normal provided the indication repeats the 4 patterns including all lamp ON.

### 3-6. PIN FUNCTION OF IC202 AND IC401

- IC202 CD System Controller ( $\mu$ PD75116GF-760-3BE)

Functions effected by the captioned controller include IC101 (RF signal processing, servo), IC201 (DSP, digital filter) and loading control in the CD unit, data exchange with IC401 (display controller), audio bus entry, etc.

Pin No.	Pin Name	I/O	Description
1-2 3 4-6	DPCLK	O O O	Not in use with the model (open). Display data transfer clock output to IC401 (display micon) Not in use with the model (open)
7 8 9 10	RESET X2 X1 DFCT SW	I I I O	System reset input. "L": Reset Clock input Clock input (4 MHz) DEFECT circuit ON/OFF switching output of IC101 (CXA1372Q). It is turned OFF ("H") to focus-search the DISC flaw detection circuit.
11 12 13 14 15	AMUTE BSOUT AFADJ LDON XLT	O O I O O	Muting control output. "H": Mute Audio bus output Test mode input. Various test operations are effected upon "L" after turning ON the POWER. Optical pickup laser diode ON/OFF switching output. "H": ON Serial data latch output to IC201 (CXD2505Q)
16 17 18 19 20	CLK DATA MODE ADJ GFS	O O I I I	Serial data transfer clock output to IC201 (CXD2505Q) Serial data output to IC201 (CXD2505Q) Not in use with the model (GND) Test mode input. Upon "L," GFS checking is disabled while continuously rotating the spindle no matter whether frame synch is issued during PLAY, PAUSE or SEARCH. GFS signal input from IC201 (CXD2505Q). "L": NG "H": OK
21 22 - 23 24 25	FOK LODOUT LODIN	I O O O	Focus OK signal input from IC101 (CXA1372Q). "H": OK Not in use with the model (open) Output to rotate M291 (loading motor) in the loading out direction. *1 Output to rotate M291 (loading motor) in the loading in direction. *1
