# SAFETY PRECAUTIONS

## IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by  $\Delta$  in the Schematic Diagram and Replacement Parts List.  
It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards.  
Do not modify the original design without permission of manufacturer.

### General Guidance

An **isolation Transformer** should always be used during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and its components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1W), keep the resistor 10mm away from PCB.

Keep wires away from high voltage or high temperature parts.

Due to high vacuum and large surface area of picture tube, extreme care should be used in **handling the Picture Tube**. Do not lift the Picture tube by its Neck.

### X-RAY Radiation

#### Warning:

The source of X-RAY RADIATION in this TV receiver is the High Voltage Section and the Picture Tube.  
For continued X-RAY RADIATION protection, the replacement tube must be the same type tube as specified in the Replacement Parts List.

To determine the presence of high voltage, use an accurate high impedance HV meter.

Adjust brightness, color, contrast controls to minimum.

Measure the high voltage.

The meter reading should indicate

31.5 ; 1.5KV

If the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure.

### Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

#### Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between  $1M\Omega$  and  $5.2M\Omega$ .

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

#### Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

#### Do not use a line Isolation Transformer during this check.

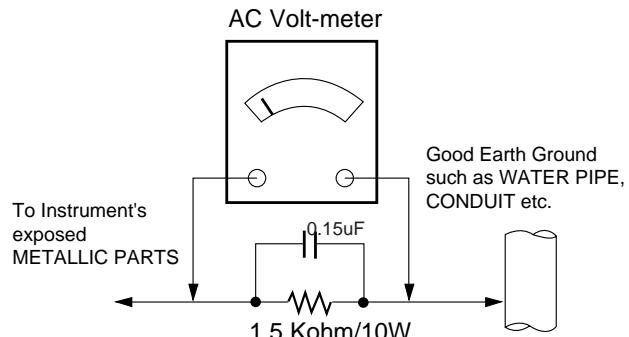

Connect 1.5K/10watt resistor in parallel with a 0.15uF capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which is corresponds to 0.5mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

#### Leakage Current Hot Check circuit

# SERVICING PRECAUTIONS

**CAUTION:** Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the *SAFETY PRECAUTIONS* on page 3 of this publication.

**NOTE:** If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

## General Servicing Precautions

1. Always unplug the receiver AC power cord from the AC power source before:
  - a. Removing or reinstalling any component, circuit board module or any other receiver assembly.
  - b. Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
  - c. Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.
- CAUTION:** A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.
- d. Discharging the picture tube anode.
2. Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc".
3. Discharge the picture tube anode only by (a) first connecting one end of an insulated clip lead to the degaussing or kine aquadag grounding system shield at the point where the picture tube socket ground lead is connected, and then (b) touch the other end of the insulated clip lead to the picture tube anode button, using an insulating handle to avoid personal contact with high voltage.
4. Do not spray chemicals on or near this receiver or any of its assemblies.
5. Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable nonabrasive applicator; 10% (by volume) Acetone and 90% (by volume) isopropyl alcohol (90%-99% strength)

**CAUTION:** This is a flammable mixture.

Unless specified otherwise in this service manual, lubrication of contacts is not required.

6. Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.
7. Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
8. Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead.

Always remove the test receiver ground lead last.

9. *Use with this receiver only the test fixtures specified in this service manual.*

**CAUTION:** Do not connect the test fixture ground strap to any heatsink in this receiver.

## Electrostatically Sensitive (ES) Devices

Some semiconductor (solid state) devices can be damaged easily by static electricity. Such components commonly are called *Electrostatically Sensitive (ES) Devices*. Examples of typical ES devices are integrated circuits and some field-effect

transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static by static electricity.

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the unit under test.
  2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
  3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
  4. Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
  5. Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
  6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
  7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
- CAUTION:** Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

## General Soldering Guidelines

1. Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range of 500°F to 600°F
2. Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
3. Keep the soldering iron tip clean and well tinned.
4. Thoroughly clean the surfaces to be soldered. Use a small wirebristle (0.5 inch, or 1.25cm) brush with a metal handle. Do not use freon-propelled spray-on cleaners.
5. Use the following unsoldering technique
  - a. Allow the soldering iron tip to reach normal temperature. (500°F to 600°F)
  - b. Heat the component lead until the solder melts.
  - c. Quickly draw the melted solder with an anti-static, suction-type solder removal device or with solder braid.
- CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
6. Use the following soldering technique
  - a. Allow the soldering iron tip to reach a normal temperature (500°F to 600°F)
  - b. First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.

- c. Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.
- CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
- d. Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

### **IC Remove/Replacement**

Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

#### *Removal*

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

#### *Replacement*

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas).

### **"Small-Signal" Discrete Transistor**

#### **Removal/Replacement**

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

### **Power Output, Transistor Device**

#### **Removal/Replacement**

1. Heat and remove all solder from around the transistor leads.
2. Remove the heatsink mounting screw (if so equipped).
3. Carefully remove the transistor from the heat sink of the circuit board.
4. Insert new transistor in the circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heatsink.

#### **Diode Removal/Replacement**

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicular to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

### **Fuse and Conventional Resistor**

#### **Removal/Replacement**

1. Clip each fuse or resistor lead at top of the circuit board hollow stake.
  2. Securely crimp the leads of replacement component around notch at stake top.
  3. Solder the connections.
- CAUTION:** Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

### **Circuit Board Foil Repair**

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

#### *At IC Connections*

To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
2. Carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

#### *At Other Connections*

Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
  2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
  3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side. Carefully crimp and solder the connections.
- CAUTION:** Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.

# SPECIFICATIONS

**NOTE :** Specifications and others are subject to change without notice for improvement.

## ■ Scope

This specification can be applied to all the Projection television related to MP-03AB Chassis.

Chassis	Model Name	Market Place	Brand	Remark
MP-03AB	RE-44NA14T/13RB	Europe (except France)	LG	'T' / 'RB' : Teletext option
	RE-40NZ60RB/RP			
	RT-44NA13/23RB	China, Asia, Africa, Middle East		
	RT-40NZ60RB/RP			
	RT-44NA43RB/RP			
	RL-44NA14T/13RB	France		
	RL-40NZ60RB			

## ■ Test Condition

Conduct the test as mentioned below.

- 1) Temperature : 25 ; 5°C
- 2) Relative Humidity : 65 ; 10%
- 3) Power Voltage : Standard input voltage (230V~, 50Hz)  
But Standard input voltage mark value is marked by model.
- 4) Use the parts only designated in B.O.M.,PARTS SPEC.,or drawings.
- 5) Follow each drawing or spec for spec and performance of parts,based upon P/N of RPL
- 6) Warm up TV set for more than 60min before the measurement.

## ■ Test and Inspection Method

- 1) Performance : Follow the Standard of LG TV test
- 2) Extra requirement

Model	Market	Remark	Appliance
RE-44NA14T	EUROPE	CE	SAFETY : CB
RE-39NZ60RB			OK EMI : EN55013 EMS : EN55020

# CONTROLS DESCRIPTION

(With TELETEXT / PIP)

(Without TELETEXT/With PIP)

All the functions can be controlled with the remote control handset. Some functions can also be adjusted with the buttons on the front panel of the set.

- 12. Remote control handset**
- 13. Remote control handset**
- 14. Before you use the remote control handset, please install the batteries. See the next page.**
- 15. 1. POWER**  
switches the set on from standby or off to standby.
- 16. 2. TV/AV (option)**  
selects TV or AV mode.  
switches the set on from standby.
- 3. TURBO SOUND BUTTON**  
selects Turbo sound.
- 4. PIP BUTTONS (option)**  
**PIP**  
switches the sub picture on or off.  
**PR +/-**  
selects a programme for the sub picture.  
**SWAP**  
alternates between main and sub picture.  
**INPUT (option)**  
selects the input mode for the sub picture.  
**SIZE**  
adjusts the sub picture size.  
**STILL**  
freezes motion of the sub picture.  
**POSITION**  
relocates the sub picture in clockwise direction.  
**SCAN**  
switches on or off the programme scan mode 12 sub pictures.
- 5. MENU**  
selects a menu.
- 6. ▲ / ▼ (Programme Up/Down)**  
selects a programme or a menu item.  
switches the set on from standby.
- ◀ / ▶ (Volume Up/Down)**  
adjusts the volume.  
adjusts menu settings.
- OK**  
accepts your selection or displays the current mode.
- 7. NUMBER BUTTONS**  
switches the set on from standby or directly select a number.
- 8. PSM (Picture Status Memory)**  
recalls your preferred picture setting.
- 9. SLEEP**  
sets the sleep timer.
- 10. I/II**  
selects the language during dual language broadcast.  
selects the sound output (option).
- 11. VCR BUTTONS**  
control a LG video cassette recorder.

- 12. MULTIMEDIA (option)**  
selects Component 1 or Component 2 modes.
- 13. TURBO PICTURE BUTTON**  
selects Turbo picture.
- 14. TELETEXT BUTTONS (option)**  
These buttons are used for teletext.  
For further details, see the 'Teletext' section.
- 15. YELLOW BUTTON**  
returns to the previously viewed programme.  
selects a favourite programme.
- 16. MUTE**  
switches the sound on or off.
- 17. SSM (Sound Status Memory)**  
recalls your preferred sound setting.
- 18. STILL**  
freezes motion of the picture.
- 19. LIST**  
displays the programme table.
- 20. ARC**  
select your desired picture format.
- 21. EYE (option)**  
switches the eye function on or off.

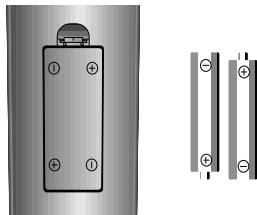

\* : No function

**COLOURED BUTTONS :** These buttons are used for teletext (only TELETEXT models) or programme edit.

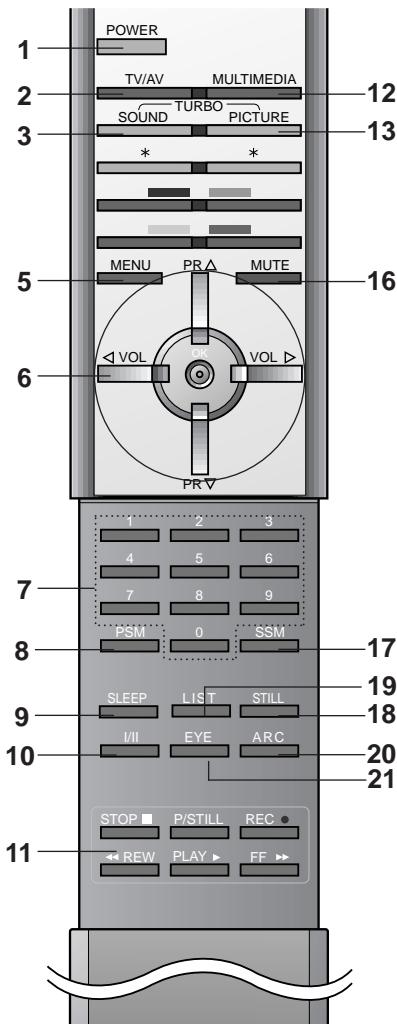

**Note :** In teletext mode, the **PR +/-**, **SWAP** and **INPUT** buttons are used for teletext function.

### Battery installation

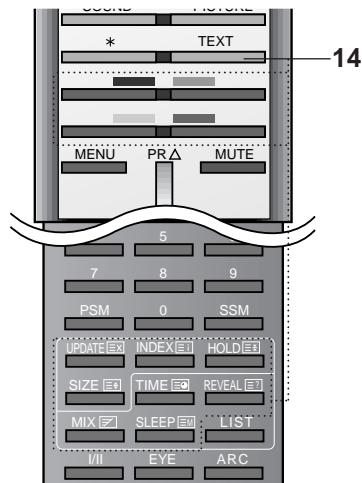

The remote control handset is powered by two AAA type batteries. To load the batteries, turn the remote control handset over and open the battery compartment. Install two batteries as indicated by the polarity symbols (+ and -) marked inside the compartment.

**Note :** To avoid damage from possible battery leakage, remove the batteries if you do not plan to use the remote control handset for an extended period of time.

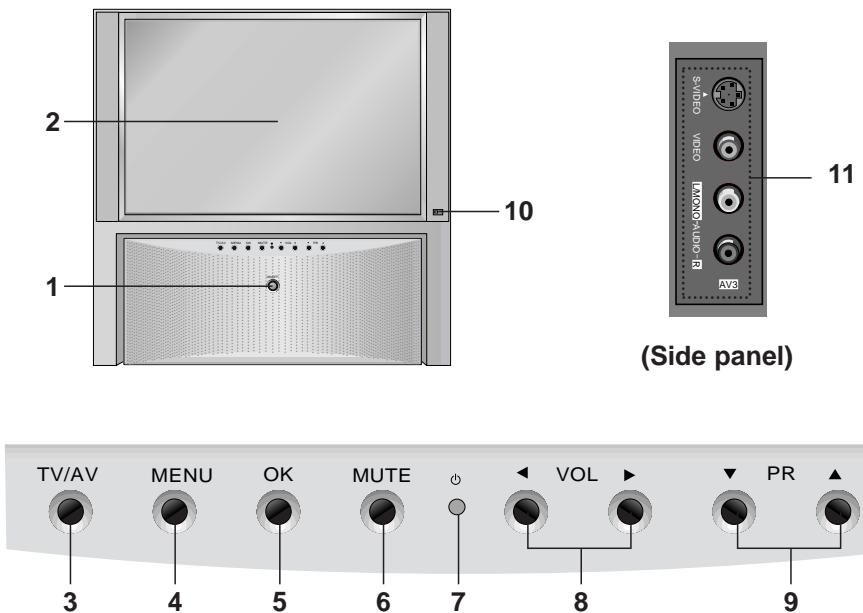

(Without PIP/TELETEXT)

(With TELETEXT/Without PIP)

## Front panel

### • RT-44NB10 series

1. **MAIN POWER**  
switches the set on or off.
2. **REMOTE CONTROL SENSOR**
3. **TV/AV (option)**  
selects TV or AV mode.  
clears the menu / text from the screen.  
switches the set on from standby.
4. **MENU**  
selects a menu.
5. **OK**  
accepts your selection or displays the current mode.
6. **MUTE**  
switches the sound on or off.
7. **POWER/STANDBY INDICATOR**  
illuminates brightly when the set is in standby mode.  
dims when the set is switched on.
8. **◀ / ▶ (Volume Up/Down)**  
adjusts the volume.  
adjusts menu settings.
9. **▲ / ▼ (Programme Up/Down)**  
selects a programme or a menu item.  
switches the set on from standby.
10. **EYE (option)**  
adjusts picture according to the surrounding conditions.
11. **AUDIO/VIDEO IN SOCKETS (AV3)**  
Connect the audio/video out sockets of external equipment to these sockets.  
**S-VIDEO/AUDIO IN SOCKETS (S-AV)**  
Connect the video out socket of an S-VIDEO VCR to the **S-VIDEO** socket.  
Connect the audio out sockets of the S-VIDEO VCR to the audio sockets as in **AV3**.
- \* **CASTERS (on the bottom)**  
turn and move the set easily.

# ADJUSTMENT INSTRUCTIONS

These instructions are applied to only MP-03AB chassis.

## Notes

- 1.Because this is not a hot chassis, it is not necessary to use an isolation transformer.  
However, the use of isolation transformer will help protect test instrument.
- 2.Adjustment must be done in the correct order.
- 3.The receiver must be operated for about 60 minutes prior to the adjustment.  
Pre-heatrun must be operated receiving moving pictures or 100% white pattern.

\* Never operate the SET over 10 minutes with still picture because a fluorescent material may get damage.

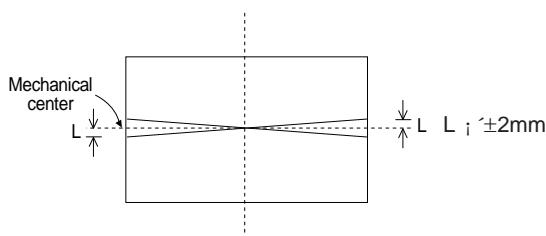

## ● Raster Slope/Focus 1th Adjustment

### 1. Preliminary steps

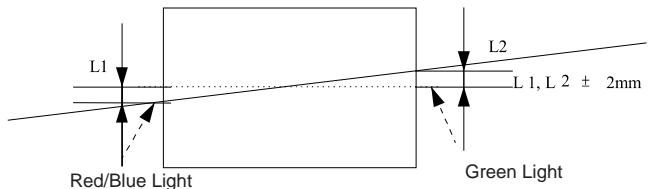

- 1) Apply power to the unit and switch the unit ON.
  - 2) Receive the EU 05 CH signal.
  - 3) Select INSTANT key on the Remote Control and then select "0 RASTER ADJ" move the cursor or by pressing the key No. 0.
  - 4) Adjust Lens Focus/Electric focus temporarily.
- \* When select "0 RASTER ADJ" mode after entering adjustment mode with INSTANT key, the convergence reset and then preparation for adjustment complete.
- \* The convergence reset is possible even from convergence adjustment mode.
- 1) Enter into convergence adjustment mode: Select INSTANT key on the Remote Control and then select "3 CONVERGENCE" move the cursor or using the key No..
  - 2) Convergence reset: After press the key No. 5, press the ENTER key.
  - 3) Adjustment mode release: Press the INSTANT key

### 2. Adjustment

- 1) Display only the Green raster using lens covers to block Red and Blue.
- 2) Rotate the Green DY and tilt the screen like the figure below.

- 3) Make 2color raster with Red or Blue and Green.
- 4) Coincide the slope of red and blue raster to that of green.

Note) 1. When adjusting raster slope, loosen the DY and fasten it after adjusting.  
2. Never rotate and adjust the fixed DY without loosening it.

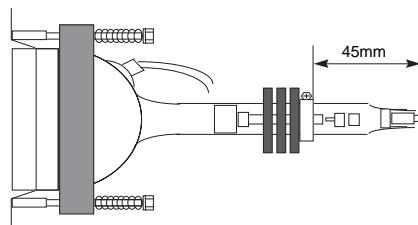

## ● Adjustment Of BEAM Alignment

### 1. Test Equipment

Video Test Generator(801GF) or Signal Generator can produce NTSC DOT pattern(408NPS or 5518/5418 equipment)

### 2. Preparation

- 1) Heat run over 60 minutes.
- 2) Pre-adjust Raster slope,Raster position & Lens focus & centering Magnet.
- 3) Check if the Magnet is located 45mm from the end of CRT.
- 4) In case of using 801GF : Receive #13 DOT Pattern of VGA mode(Format #5) through PC input terminal.  
In case of using NTSC generator : Receive Dot signal through the external input terminal.

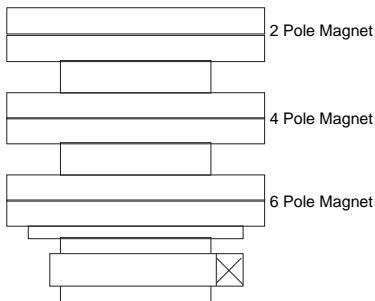

### 3. 2-Pole Magnet Adjustment

- (1) Make Green raster using lens cover.
- (2) Check the center position of DOT pattern on the center of the screen after turning Green focus volume left.
- (3) Turning green focus volume right and adjust 2-Pole magnet so the position to coincide that of item "(2)".
- (4) Adjust not to shift the screen by turning green focus volume clockwise and counter clockwise.
- (5) If the screen shifts, readjust (2)~(4).
- (6) Do the same method in Red and Blue.

### 4. Beam Shape (4 & 6-Pole Magnet) Adjustment

- (1) Do after 2-Pole magnet adjustment.
- (2) Make Green raster using lens cover and turn the focus volume right.
- (3) Make the dot in the center a perfect circle using 4 & 6-Pole magnet.
- (4) Do the same method in Red & Blue.
- (5) Fasten the Magnet after adjustment.
- (6) Adjust focus accurately.

## ● Centering Magnet Adjustment

### 1. Preliminary steps

- 1) Receive the EU 05 CH signal.(PR.1 : PAL B/G 175.25MHZ)
- 2) Press the keys of Remote Controller for adjustment to reset the convergence.
  - a.Adjustment mode:Press the IN-START key.
  - b.Data reset : Press 0 KEY.
  - c.Adjustment mode cancellation : Press the ENTER key.

### 2. Adjustment

- 1) Operate adjustment about Red,Green,Blue centering magnet.
- 2) SGS-THOMSON Convergence assy  
Adjust until the center of blue signal is shifted up to 40mm left from that of green signal and center of red signal is shifted up to 40mm right from that of green signal with turning the centering magnet.
- 3) After adjustment, re-adjust convergence data and exit the adjusting mode.
  - a.Adjustment mode:Press the IN\_START key.
  - b.Data reset : Press 0 KEY.
  - c.Adjustment mode cancellation : Press the Enter key.

## ● High Voltage Regulation Adjustment

### 1. Test Equipment

Digital Multi-Meter(DMM)

### 2. Preparation for Adjustment.

Select picture mode to 'DYNAMIC' in no signal input.

### 3. Adjustment

- 1) Press the IN\_START key and then press '1' key.(HV ADS)
- 2) Connect "+" terminal(Red) of DMM to the P415 of the Deflection PCB, [+] and the "-"terminal(Black) to the P416,[-].
- 3) Adjust VR401 so that the voltage of multimeter to be below voltage.  
Voltage:  $21.7 \pm 0.1V$ .
- 4) Exit the adjustment mode by pressing the enter key

## ● CUT-OFF Voltage Adjustment

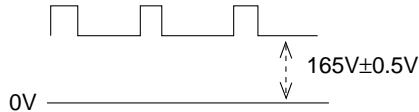

### 1. Preliminary steps

- (1) Select INSTANT key on the Remote Control and then select "2 SCREEN ADJ" move the cursor or using the key No..

- (2) Adjustment must be operated in a dark room (simple dark room)

### 2. Adjustment

- (1) Test Equipment: Oscilloscope, 100:1 Probe
- (2) Connect oscilloscope to cathode of R, G, B(R926R/B/G: SCREEN ADJ on the PCB) and GND.
- (3) Turning Screen Volume (R/G/B) in Focus Pack and adjust R/G/B is  $165V \pm 0.5V$ .

- (4) After adjustment complete, exit the RASTER adjustment mode using ENTER key and exit the SVC adjustment mode using INSTANT key.

## ● Deflection Adjustment

### 1. Preliminary steps

- 1) NTSC mode should be adjusted after adjusting PAL mode.
- 2) NTSC adjustment should be done in STANDARD mode of picture after receiving 13CH signal or MULTI 48CH signal, and PAL adjustment should be done in STANDARD mode of picture after receiving EU05 CH.
- 3) Reset the data in convergence adjustment mode, quit the mode.
  - Adjustment Mode : Press the IN\_START key and then '0' key.
  - Data reset : Press the "0" key.
  - Adjustment mode cancellation :Press the ENTER key.
- 4) Display only the Green raster using lens covers to block Red and Blue.

### 2. PAL Mode Deflection adjustment

Do not adjust V-LIN, S-COR, A-BOW, A-ANG, UCPIN, LCPIN, V-ASP, V-SCR in PAL MODE. At SVC mode, press the '0' key get into the deflection adjustment mode.

#### 1) VS (Vertical Shift)

Adjust until the geometric vertical center line is accord with the vertical center line of screen JIG in EU 05 CH by pressing the VOLUME  $\blacktriangleleft$ ,  $\triangleright$  key.

#### 2) VA (Vertical Amplitude)

Adjust until sixth vertical line from upper and lower center of the screen is accord with the last point of the frame.

#### 3) HS (Horizontal Shift)

Adjust until the geometric horizontal center line is accord with the horizontal center line of screen JIG.

#### 4) EW (East-west Width)

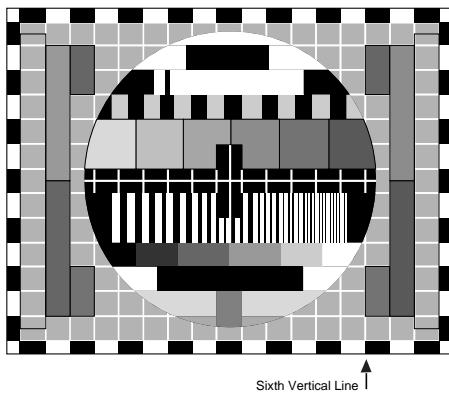

Adjust until the outermost left and right vertical line of the screen is accord with the last point of the frame.

#### 5) EP (East-west Parabola)

Adjust so that middle portion of the outermost left and right vertical line looks like parallel with vertical lines of the PRT.

### 6) ET(East-west Trapezium)

Adjust to make the width of top horizontal line same with it of the bottom horizontal line.

### 7) A-ANG(AFC Angle)

Vertical slope adjustment

### 8) A-BOW(AFC BOW)

Vertical get bending adjustment

### 9) U-C(Upper Corner Pincushion)

Upper part pin cushion adjustment

### 10) L-C(Lower Corner Pincushion)

Lower part pin cushion adjustment

### 11) U-VL(Upper Vertical Linearity)

Adjust vertical linearity of upper screen

### 12) L-VL(Lower Vertical Linearity)

Adjust vertical linearity of lower screen

### 13) VL (Vertical Linearity)

Adjust the top/bottom size of circle to be same in the EU 05CH.

### 14) SC (Vertical "S" Correction)

Adjust so that all distance between each horizontal lines are to be the same.

### 15) V-ASP(Vertical Aspect Ratio)

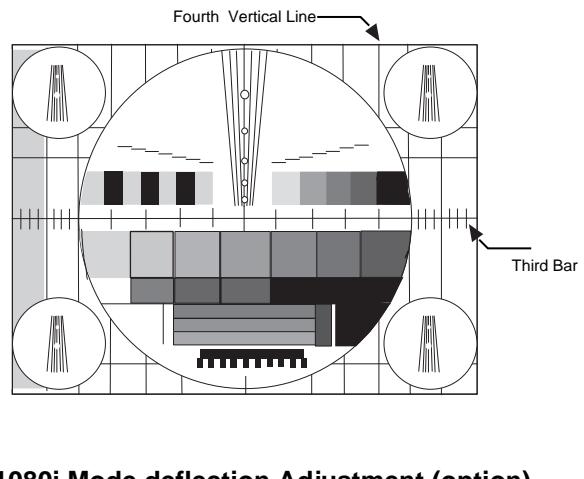

Adjust the vertical aspect ratio.

### 16) Store the adjusted data in EEPROM by pressing the "OK" key before exiting adjustment mode.

### 17) Exit the Adjustment mode by pressing the 'TV/AV' key.

## 3. NTSC Mode Deflection Adjustment

- 1) Adjust vertical size (VA Adjustment) until fifth vertical bar from upper and lower center screen is accord with the edge of the frame.
- 2) Adjust horizontal size (EW Adjustment) until third bar to indicate horizontal size of circle is accord with the edge of the frame.
- 3) Do other adjustments the same as in PAL mode.

## 4. 1080i Mode deflection Adjustment (option)

### (1) Test Equipment

SETTOP BOX with 1080i output or MSPG-925LTH (Programmable VIDEO Signal Generator).

### (2) Preliminary steps

- 1) After adjust 1080i with output of the SETTOP BOX, connects the Y signal which is output from SETTOP BOX with the VIDEO input terminal of the SIDE-AV(AV3).
- 2) Select INSTART key on the Remote Control and then select "5 1080I-ADJ" move the cursor or using the key No5.
- 3) Adjust vertical size (V-SIZE Adjustment) until fifth vertical bar from upper and lower center screen is accord with the edge of the frame.
- 4) Adjust horizontal size(H-SIZE Adjustment) until twelfth

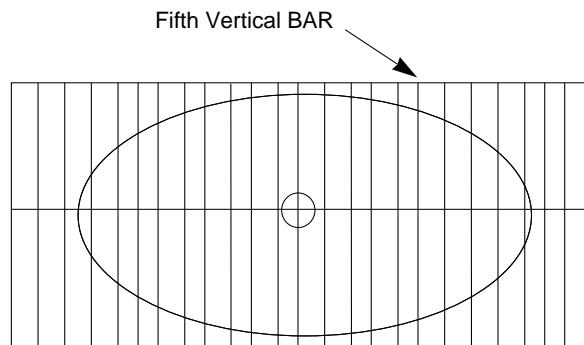

Fig. 3

vertical bar is accord with the edge of the frame.

5) Do other adjustments the same as in PAL mode.

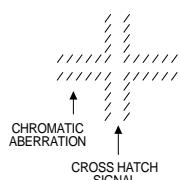

## ● Lens Focus & Electronic Focus Adjustment

### 1. Preliminary steps

- 1) Electronic focus,Raster slope & Raster position must be pre-adjusted.
- 2) Heat-run over 60 minutes.
- 3) Receive Crosshatch pattern.  
(PAL:EU07(PR 8) or NTSC:09CH(PR 13))

- 4) Adjustment must be done in a dark room(simple dark room)  
Be careful not to touch the lens during adjustment.
- 5) Make any one color raster using lens covers.
- 6) Rotating lens right from the front side chromatic haze occurs  
beside Cross-hatch line changes as follows;

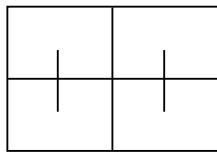

Lens	Change of chromatic aberration
Red	Orange $\Rightarrow$ Scarlet
Green	Blue $\Rightarrow$ Red
Blue	Purple $\Rightarrow$ Green

\* Note: Loosen the butterfly nut in the lens tub slightly, being careful that it is not loosened to the point that the lens can move out of focus.

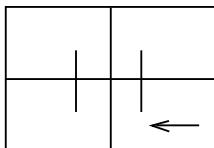

## 2. G-lens Adjustment

- 1) Turn the lens until the chromatic aberration changed Blue to Red point.
- 2) Viewing the all screen, in no case of the chromatic aberration appeared slimly within 3.5 cross-Hatch of the picture center. At this time, in case that the red chromatic aberrations bright line isn't equal, adjust Green lens so that the red chromatic aberration is appeared more than previous time.
- 3) Switching the signal to 13CH or EU07 and operate adjustment minutely.
- 4) Adjust Green focus control volume of focus pack so that the external big circle's part appeared clearly.
- 5) Adjust accurately by repeat the upper control.
- 6) Especially, noting to the Green light because it influenced on picture's function.

## 3. R-lens adjustment

- 1) Turn the R-lens until the chromatic aberration changed orange to scarlet.
- 2) Adjust to appear Red chromatic aberration in right within 3.5 cross-hatch of the picture center. Adjust the chromatic aberration so that it located center correctly
- 3) Switching the signal to 13CH or EU07 and adjust it as same method of Green lens.
- 4) Adjust as same method of Green lens with Red focus control

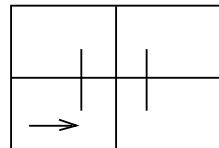

volume of focus pack.

## 4. B- lens adjustment

- 1) Turn the B-lens until the chromatic aberration of 3.5 Cross-hatch left from center point changes from purple to green.

- 2) Adjust as same as method of Green lens with Red focus control volume of focus pack.

- 3) Adjust the R-focus control volume of focus pack as same method of Green lens.

Note) After adjustment Red, Green & Blue lens, remove lens cover and receive Cross-hatch pattern and check the overall focus. If need, repeat above.

## ● Convergence Adjustment

### 1. Preliminary steps

This adjustment should be performed after warming up 60 minutes.

- 1) Adjust after Horizontal/Vertical Raster position, Beam alignment magnet, and focus adjustments have been completed.
- 2) Do it always with crosshatch pattern.
- 3) Adjust for both PAL and NTSC system.
- 4) Use the JIG screen with the cross hatch pattern for Adjustment.

### 2. Convergence Key

1) Convergence Mode : IN\_START, '3'

2) Cursor shift :  $\blacktriangleleft$ ,  $\triangleright$ ,  $\blacktriangleup$ ,  $\blacktriangledown$

3) Cursor Movement/Adjustment Selection : OK

4) Cursor Color Selection : TV/AV

5) Adjustment mode out : IN\_START

\*Note: When cursor flashes, set is in adjustment mode. When R, G or B selected color flashes, the set is in cursor movement mode.

## ● PAL Mode Adjustment

### 1. Preliminary steps

1) Receive the EU 05CH signal.

2) Press the buttons IN\_START, '3' of Remote Controller for adjustment to get into the convergence adjustment mode.

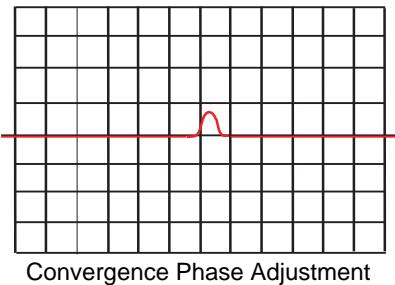

### 2. Horizontal/Vertical phase adjustment

1) Press the buttons 9 & 5 to get into the phase adjustment mode.

2) Horizontal Phase Adjustment.

Move the convex curve to the quarter of Vertical center by pressing the Volume  $\blacktriangleleft$  /  $\triangleright$  button.

3) Press the OK button to escape from the adjustment.

### 3. Pattern position adjustment

- 1) Change into pattern shift mode.  
(Press numeric buttons "9" & "4")
- 2) Make sure to overlap pattern and image.  
(Use MUTE button)
- 3) Accord the center of image and pattern.  
(Use **◀**, **▶**, **▲**, **▼** buttons)
- 4) Quit pattern shift mode. (Press "OK" button)
- 5) Save adjusted phase/pattern position adjustment mode.(Press "9", "2" & "OK" buttons)

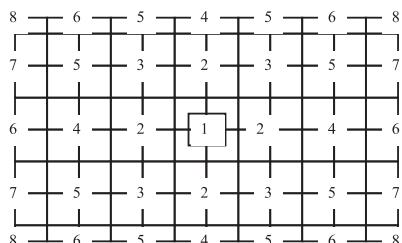

### 4. Auto convergence Adjustment by Camera

Convergence is based on the auto adjustment using PC and Camera, if need, adjust manually like below method.

### 5. Green convergence adjustment

- 1) Show the OSD on screen by pressing 2 button,then change the OSD to green(G) adjustment mode with pressing TV/AV button.
- 2) Close the cover of red PRT and blue PRT so that green display on screen only.
- 3) Adjust to coincide green pattern with screen JIG pattern.  
(Use **◀**, **▶**, **▲**, **▼** buttons)

Here, do it in the same order from center listed in figure.

Adjustment Order Of Convergence

### 6. Red convergence adjustment

- 1) Display "R" red color on the screen by the TV/AV button.
- 2) If the need to do, close the cover of the blue lens.
- 3) Coincide the red screen with the green screen or screen in same way with that of green convergence adjustment.

### 7. Blue convergence adjustment

- 1) Display "B" blue color on the screen by the TV/AV button.
- 2) Coincide the blue screen with the green screen in same way with that of red convergence adjustment.

### 8. Adjusted data saving

- 1) To save the data after adjustment,Press "9", "1" & "OK" button.
- 2) Exit convergence adjustment mode. ("IN\_START" button)

### 9. Auto-Convergence measuring or Measuring back up data (option)

- 1) Operate the auto-convergence measuring or the measuring back up data separately in PAL,NTSC and 1080i(Option) mode.
- 2) Operate in the condition of 'Zero magnetometer ' in room after correcting convergence manually.
- 3) How to measuring  
Press the 'IN\_START -> 3 ->MENU->3' key to operate Auto convergence measuring or the measuring back up data.
- 4) Exit convergence adjustment mode by the IN-START key.

## ● White Balance Adjustment

### 1. Test Equipment

Brightness meter(CA110)

### 2. Adjustment

- 1) This adjustment must be operated in a dark room or equivalent.
- 2) Adjust after Cut-Off and Focus adjustment.
- 3) The brightness meter must be located in 20± 5 cm distance from the center of the screen.
- 4) Receive WINDOW signal.

\* High Light :

RE/RL :  $250 \pm 10 \text{ cd/m}^2$  (16:9)

RT :  $160 \pm 10 \text{ cd/m}^2$  (16:9)

\* Low Light :  $10 \pm 3 \text{ cd/m}^2$

RE/RL :  $190 \pm 10 \text{ cd/m}^2$  (4:3)

RT :  $160 \pm 10 \text{ cd/m}^2$  (4:3)

- 5) Set BRIGHT to H/Light adjustment mode in 4) and enter SVC mode by pressing the "IN\_START" button. Adjust RG (R Gain) and BG (B Gain) until color coordinate becomes RE/RL - X=0.283 and Y=0.292, RT - X=0.269 and Y=0.274 (Deviation :  $\pm 0.03$ ).

- 6) Set BRIGHT to L/Light adjustment mode and adjust CR (R Cut Off) and CB (B Cut Off) until color coordinate becomes RE/RL - X=0.280 and Y=0.260, RT - X=0.269 and Y=0.274 (Deviation :  $\pm 0.03$ ).

- 7) Repeat adjusting until the color coordinate of H/Light and L/Light is satisfied.

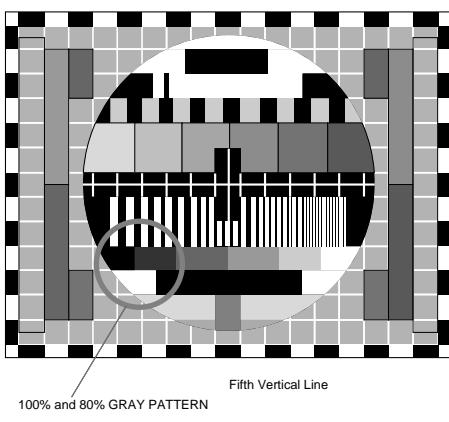

- 8) Save the data after adjustment.

(Press "ENTER" button)

- 9) Exit adjustment mode. ("INSTANT" button)

## ● Sub-Bright Adjustment(Option)

- 1) Tune the TV set to receive a EU 05 CH.
- 2) Enter WB mode by pressing the IN\_START & '4' button.  
Adjust S-BRI data until 100% and 80% GRAY PATTERN is classified.  
(Use  $\blacktriangleleft$ ,  $\triangleright$ ,  $\blacktriangleup$ ,  $\blacktriangledown$ , OK buttons)

## ● Auto-Convergence Check (option)

- 1) Check the Auto-Convergence in PAL/NTSC mode separating.
- 2) Press the IN\_START key on R/C for adjustment and press the Time key to check whether Auto-Convergence works normally in each mode.
- 3) If not, check the Convergence condition or Measuring condition and SENSOR condition.
- 4) The shipment must be done after restoring the final auto convergence data value.

(Restore a Convergence data : IN\_START -> '3' -> TEXT)

## ● Check the Option Adjustment

- 1) Check the OPTION1~5 data of attach 6 is well recorded.
- 2) The option value of each suffix is started on JOB EXP of 3141VMN chassis Assy.

## ● Convergence Adjustment Mode

- INSTANT -> 3 -> MENU

\* This Mode is for engineering. So,don't change before permission from Design Department.

0.AC POSITION READ : Distance data(After auto convergence measuring)

1.Save to 50Hz/60Hz : Save (convergence adjustment data)

It's same 9,1,Enter.

2.Save Control data : Save (A phase adjustment data)

It's same 9,2,Enter.

3.AC Position Meas/ Meas backup data. : Execute( auto convergence measuring)

4.Pattern : Adjust location of convergence pattern.

It's same 9,4,Enter.

5.Phase : Adjust a phase of convergence pattern.

It's same 9,5,Enter.

6.GRID Border

Item	Description	(NTSC)	(PAL)	(1080i)
HGD	Horizontal Grid Distance	27	27	29
HRD	Horizontal Retrace Distance	55	55	42
VGD	Vertical Grid Adjustment	38	23	44
BPH	Border Position Horizontal	18	20	22
BPV	Border Position Vertical	26	18	35

7.ADJUST: Set the Dynamic focus data&auto-convergence data

Item	Description	4:3 TV (WIDE = 0 )			16:9 TV (WIDE =1)		
		NTSC	PAL	1080i	NTSC	PAL	1080i
FV1	Focus parabola top value	29	24	29	30	28	30

## 5.CXA2151Q adjustment item

Menu	Description	PAL	NTSC	Remark
INPUT	Selects the four systems of inputs IN1 to IN4	0	0	
MAT-O	Selects the type of matrix conversion	0	0	
VFREQ	Selects the frequency of the dummy sync output to SELV_OUT(pin23)	0	0	
SELS1	Selects the type of the signal input to IN1_H/L1(pin36) and IN1_V/L2(pin37)	0	0	
SELS2	Selects the type of the signal input to IN1_H/L1(pin44) and IN1_V/L2(pin45)	1	1	
FIX-S	Swithches the sync identification circuit operating mode	0	0	
V-TC	Sets the V sync separation time constant	0	0	
H-WID	Sets the SELH_OUT (pin22) output pulse width	0	0	
HSEPS	Sets the sync separation method. (Valid for YG_IN(Pin16) input)	0	0	
HD-DC	Sets the H sync separation time constant of the YG_IN (Pin16) input	0	0	
HYSW	Switches the signal output to YG_OUT (Pin 15)	0	0	
HS-MA	Sets whether or not to add H-sync within V-sync at SELH_OUT(Pin22)	0	0	
MACRO	Switch for eliminating the macrovision signal of the 525P signal at SELH_OUT (Pin22) This is valid only when HFREQ =1	0	0	
SELDU	This Switch selects whether to output the sync separated signal or the dummy Sync to SELH_OUT (Pin22) and SELV_OUT(Pin23)	0	0	
CLK-S	This switch selects the clock for the sync counter	0	0	
G-SEL	This switch selects the gain or mute of the signals output to SELCR_OUT (Pin25), SELCB_OUT(Pin26) and SELY_OUT (pin27)	1	1	
CBGAI	SELCB_OUT(Pin26) gain control	0	0	
CRGAI	SELCR_OUT(Pin25) gain control	0	0	
YGAIN	SELY_OUT(Pin27) gain control	0	0	
HFREQ	Selects the frequency of the dummy sync output to SELH_OUT(Pin22)	1	1
