

SHARP SERVICE MANUAL

No. S98P7TUX1U///

LCD COLOR TELEVISION (AVC SYSTEM)

MODEL TU-X1U

In the interests of user-safety (Required by safety regulations in some countries) the set should be restored to its original condition and only parts identical to those specified should be used.

Parts Guide

Parts marked with "⚠" are important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

SAFETY PRECAUTION

IMPORTANT SERVICE SAFETY PRECAUTION

- Service work should be performed only by qualified service technicians who are thoroughly familiar with all safety checks and the servicing guidelines which follow:

■WARNING

1. For continued safety, no modification of any circuit should be attempted.
2. Disconnect AC power before servicing.

CAUTION: FOR CONTINUED PROTECTION AGAINST A RISK OF FIRE REPLACE ONLY WITH SAME TYPE FUSE.

F701 (AC250V T2.5A)
F702 (AC250V T2.5A)

■BEFORE RETURNING THE RECEIVER (Fire & Shock Hazard)

Before returning the receiver to the user, perform the following safety checks:

3. Inspect all lead dress to make certain that leads are not pinched, and check that hardware is not lodged between the chassis and other metal parts in the receiver.
4. Inspect all protective devices such as non-metallic control knobs, insulation materials, cabinet backs, adjustment and compartment covers or shields, isolation resistor-capacitor networks, mechanical insulators, etc.
5. To be sure that no shock hazard exists, check for leakage current in the following manner.
- Plug the AC cord directly into a 120 volt AC outlet.
- Using two clip leads, connect a 1.5k ohm, 10 watt resistor paralleled by a 0.15μF capacitor in series with all exposed metal cabinet parts and a known earth ground, such as electrical conduit or electrical ground connected to an earth ground.

SAFETY NOTICE

Many electrical and mechanical parts in LCD color television have special safety-related characteristics.

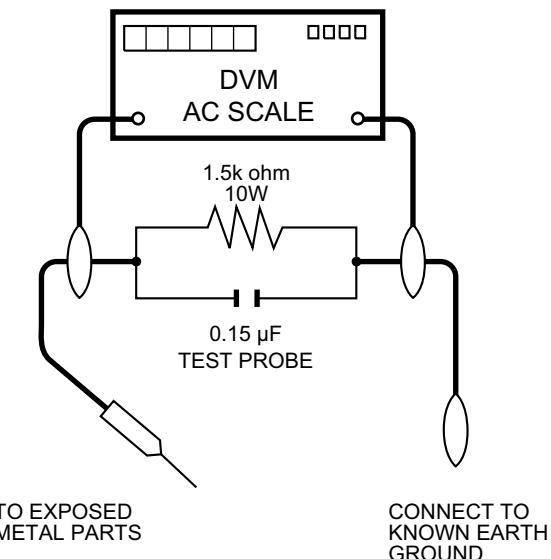

These characteristics are often not evident from visual inspection, nor can protection afforded by them be necessarily increased by using replacement components rated for higher voltage, wattage, etc.

Replacement parts which have these special safety characteristics are identified in this manual; electrical components having such features are identified by "△" and shaded areas in the Replacement Parts List and Schematic Diagrams.

- Use an AC voltmeter having with 5000 ohm per volt, or higher, sensitivity or measure the AC voltage drop across the resistor.
- Connect the resistor connection to all exposed metal parts having a return to the chassis (antenna, metal cabinet, screw heads, knobs and control shafts, escutcheon, etc.) and measure the AC voltage drop across the resistor.

All checks must be repeated with the AC cord plug connection reversed. (If necessary, a nonpolarized adaptor plug must be used only for the purpose of completing these checks.)

Any reading of 0.75 Vrms (this corresponds to 0.5 mA rms AC.) or more is excessive and indicates a potential shock hazard which must be corrected before returning the monitor to the owner.

TO EXPOSED METAL PARTS

CONNECT TO KNOWN EARTH GROUND

For continued protection, replacement parts must be identical to those used in the original circuit.

The use of a substitute replacement parts which do not have the same safety characteristics as the factory recommended replacement parts shown in this service manual, may create shock, fire or other hazards.

PRECAUTIONS A PRENDRE LORS DE LA REPARATION

■ Ne peut effectuer la réparation qu' un technicien spécialisé qui s'est parfaitement accoutumé à toute vérification de sécurité et aux conseils suivants.

■ AVERTISSEMENT

1. N'entreprendre aucune modification de tout circuit. C'est dangereux.
2. Débrancher le récepteur avant toute réparation.

PRECAUTION: POUR LA PROTECTION CONTINUE CONTRE LES RISQUES D'INCENDIE, REMPLACER LE FUSIBLE

F701 (AC250V T2.5A)

F702 (AC250V T2.5A)

■ VERIFICATIONS CONTRE L'INCEN-DIE ET LE CHOC ELECTRIQUE

Avant de rendre le récepteur à l'utilisateur, effectuer les vérifications suivantes.

3. Inspecter tous les faisceaux de câbles pour s'assurer que les fils ne soient pas pincés ou qu'un outil ne soit pas placé entre le châssis et les autres pièces métalliques du récepteur.
4. Inspecter tous les dispositifs de protection comme les boutons de commande non-métalliques, les isolants, le dos du coffret, les couvercles ou blindages de réglage et de compartiment, les réseaux de résistancecapacité, les isolateurs mécaniques, etc.
5. S'assurer qu'il n'y ait pas de danger d'électrocution en vérifiant la fuite de courant, de la façon suivante:
- Brancher le cordon d'alimentation directement à une prise de courant de 120V. (Ne pas utiliser de transformateur d'isolation pour cet essai).

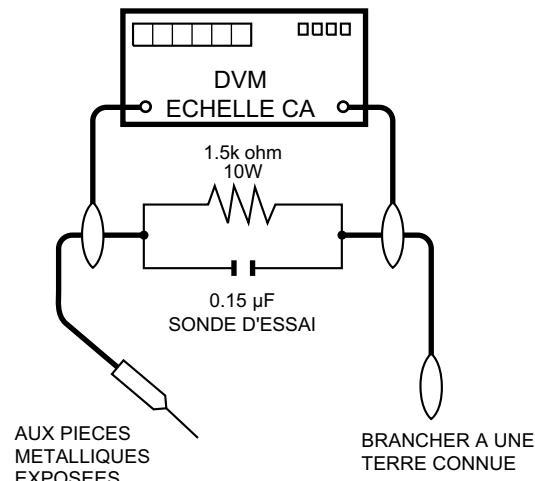

- A l'aide de deux fils à pinces, brancher une résistance de 1.5 kΩ 10 watts en parallèle avec un condensateur de $0.15\mu\text{F}$ en série avec toutes les pièces métalliques exposées du coffret et une terre connue comme une conduite électrique ou une prise de terre branchée à la terre.

- Utiliser un voltmètre CA d'une sensibilité d'au moins $5000\Omega/\text{V}$ pour mesurer la chute de tension en travers de la résistance.

- Toucher avec la sonde d'essai les pièces métalliques exposées qui présentent une voie de retour au châssis (antenne, coffret métallique, tête des vis, arbres de commande et des boutons, écousson, etc.) et mesurer la chute de tension CA en-travers de la résistance. Toutes les vérifications doivent être refaites après avoir inversé la fiche du cordon d'alimentation. (Si nécessaire, une prise d'adpatation non polarisée peut être utilisée dans le but de terminer ces vérifications.)

La tension de pointe mesurée ne doit pas dépasser 0.75V (correspondante au courant CA de pointe de 0.5mA).

Dans le cas contraire, il y a une possibilité de choc électrique qui doit être supprimée avant de rendre le récepteur au client.

AVIS POUR LA SECURITE

De nombreuses pièces, électriques et mécaniques, dans les téléviseur ACL présentent des caractéristiques spéciales relatives à la sécurité, qui ne sont souvent pas évidentes à vue. Le degré de protection ne peut pas être nécessairement augmentée en utilisant des pièces de remplacement étalonées pour haute tension, puissance, etc.

Les pièces de remplacement qui présentent ces caractéristiques sont identifiées dans ce manuel; les pièces électriques qui présentent ces particularités sont identifiées par la marque " Δ " et hachurées dans la liste des pièces de remplacement et les diagrammes schématiques.

Pour assurer la protection, ces pièces doivent être identiques à celles utilisées dans le circuit d'origine. L'utilisation de pièces qui n'ont pas les mêmes caractéristiques que les pièces recommandées par l'usine, indiquées dans ce manuel, peut provoquer des électrocutions, incendies, radiations X ou autres accidents.

PRECAUTIONS FOR USING LEAD-FREE SOLDER

■Employing lead-free solder

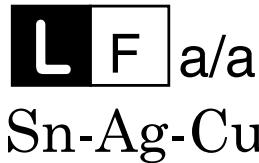

- “PWBs” of this model employs lead-free solder. The LF symbol indicates lead-free solder, and is attached on the PWBs and service manuals. The alphabetical character following LF shows the type of lead-free solder.

Example:

Sn-Ag-Cu

Indicates lead-free solder of tin, silver and copper.

Sn-Ag-Cu

Indicates lead-free solder of tin, silver and copper.

■Using lead-free wire solder

- When fixing the PWB soldered with the lead-free solder, apply lead-free wire solder. Repairing with conventional lead wire solder may cause damage or accident due to cracks.

As the melting point of lead-free solder (Sn-Ag-Cu) is higher than the lead wire solder by 40 °C, we recommend you to use a dedicated soldering bit, if you are not familiar with how to obtain lead-free wire solder or soldering bit, contact our service station or service branch in your area.

■Soldering

- As the melting point of lead-free solder (Sn-Ag-Cu) is about 220 °C which is higher than the conventional lead solder by 40 °C, and as it has poor solder wettability, you may be apt to keep the soldering bit in contact with the PWB for extended period of time. However, Since the land may be peeled off or the maximum heat-resistance temperature of parts may be exceeded, remove the bit from the PWB as soon as you confirm the steady soldering condition.

Lead-free solder contains more tin, and the end of the soldering bit may be easily corroded. Make sure to turn on and off the power of the bit as required.

If a different type of solder stays on the tip of the soldering bit, it is alloyed with lead-free solder. Clean the bit after every use of it.

When the tip of the soldering bit is blackened during use, file it with steel wool or fine sandpaper.

- Be careful when replacing parts with polarity indication on the PWB silk.

Lead-free wire solder for servicing

		ANT/CABLE 75 Ω Unbalance, F Type x 1 for Analog (VHF/UHF/CATV) and Digital (AIR/CABLE)	
		DC OUTPUT DC 5V 1.8A MAX (For a Sharp device)	
		DIGITAL AUDIO OUTPUT Optical Digital audio output x 1 (PCM/Dolby Digital)	
		DISPLAY OUTPUT AV out	
		ETHERNET Network connector	
		OUTPUT Audio out	
		RS-232C 9-pin D-sub male connector	
OSD language		English/French/Spanish	
Power Requirement		AC 120 V, 60 Hz	
Power Consumption	AVC System	38 W (0.4 W Standby with AC 120 V)	
Weight	AVC System	8.4 lbs./3.8 kg	
Dimension ² (W x H x D)	AVC System ³	16 ^{15/16} x 2 ^{13/16} x 12 ^{17/32} inch	
Operating temperature		+32°F to +104°F (0°C to +40°C)	

¹ Emergency alert messages via Cable are unreceivable.

² The dimensional drawings are shown on the inside back cover.

³ The depth does not include the protruding part of terminals.

- As part of policy of continuous improvement, SHARP reserves the right to make design and specification changes for product improvement without prior notice. The performance specification figures indicated are nominal values of production units. There may be some deviations from these values in individual units.

Optional Accessory

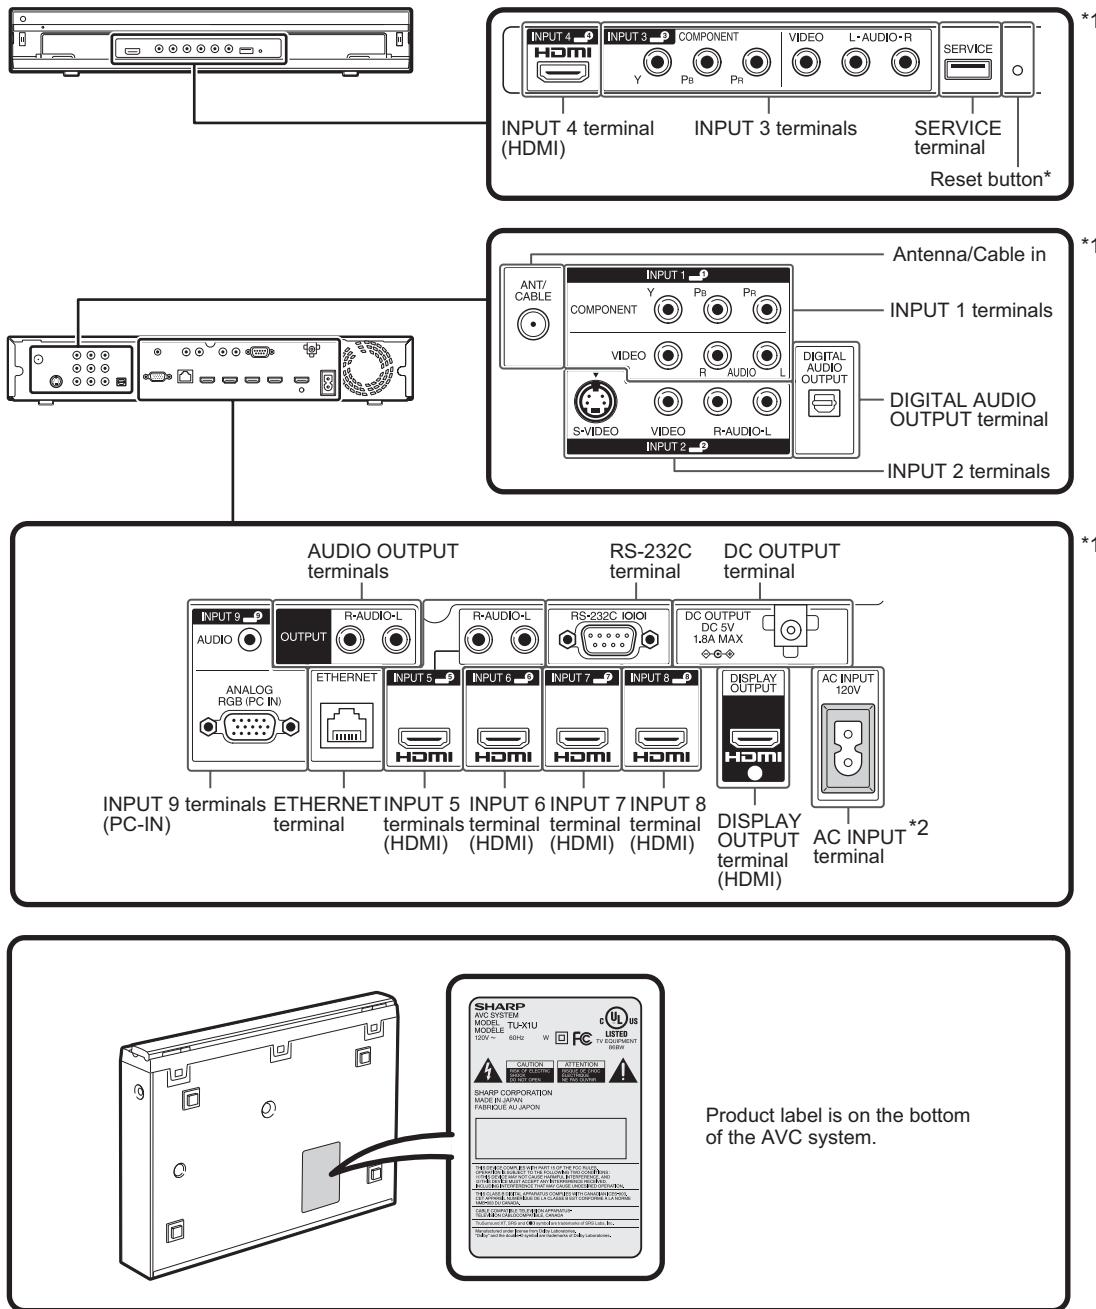

The listed optional accessory is available for the Liquid Crystal Television. Please purchase it at your nearest shop.

- Additional optional accessories may be available in the near future. When purchasing, please read the newest catalogue for compatibility and check the availability.

Part name	Model number
Wall mount bracket	AN-52AG8 (for LC-52XS1U)
	AN-65AG2 (for LC-65XS1U)
Stand Unit	AN-52ST1 (for LC-52XS1U)
	AN-65ST1 (for LC-65XS1U)

[2] OPERATION MANUAL

AVC System (Front/Rear/Bottom)

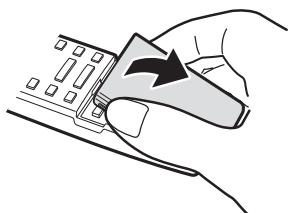

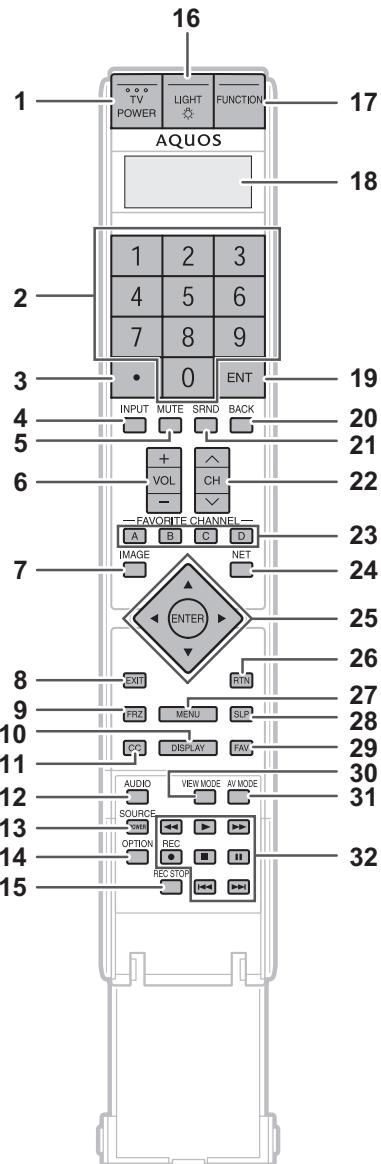

- * Press the reset button if the system cannot return to its original state after performing various operations.
 - AV MODE resets to DYNAMIC (Fixed)
 - TV channel returns to initial channel setting
 - Audiosetting initializes
 - Imageposition initializes
 - Reset will not work if the TV is in standby mode
 - Reset will not delete channel preset or secret number

NOTE

- *1 External equipment connection.
- *2 Connecting the AC cord.

Remote Control Unit

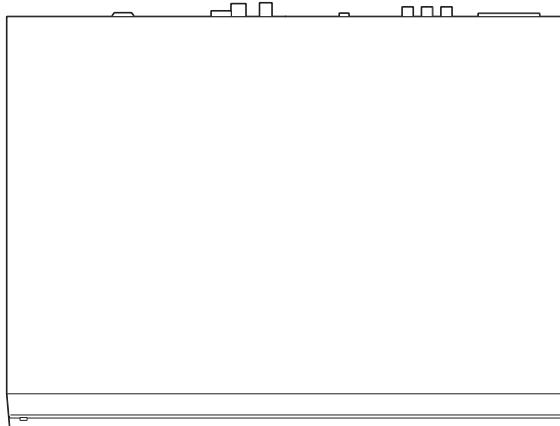

NOTE

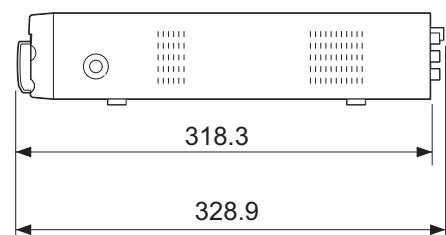

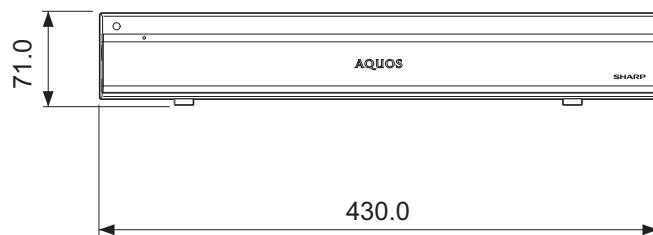

- When using the remote control unit, point it at the Monitor.

- 1 **TV POWER:** Switch the power on or enter standby.
- 2 **0–9:** Set the channel.
- 3 **• (DOT):**
- 4 **INPUT:** Select an input source. (TV, INPUT 1, INPUT 2, INPUT 3, INPUT 4, INPUT 5, INPUT 6, INPUT 7, INPUT 8, INPUT 9, IrSS)
- 5 **MUTE:** Mute the sound.
- 6 **VOL +/–:** Set the volume.
- 7 **IMAGE:** Display a slide show.
- 8 **EXIT:** Turn off the menu screen.
- 9 **FRZ (FREEZE):** Set the still image. Press again to return to normal screen.
- 10 **DISPLAY:** Display the channel information.
- 11 **CC:** Display captions from a closed-caption source.
- 12 **AUDIO:** Selects the MTS/SAP or the audio mode during multi-channel audio broadcasts.
- 13 **SOURCE POWER:** Turns the power of the external equipment on and off.
- 14 **OPTION:** Display the AQUOS LINK MENU screen. This button will function only when AQUOS LINK is used.
- 15 **REC STOP:** Stops one touch recording. This button will function only when AQUOS LINK is used.
- 16 **LIGHT :** When this button is pressed, some buttons (for example, **VOL +/–** and **CH ^/**) on the remote control unit will light. The lighting will turn off if no operations are performed within about 5 seconds. This button is used for performing operations in low-light situations.
- 17 **FUNCTION:** Switches the remote control for TV, CBL/SAT, VCR, DVD and AUDIO operation.
* To enter the code registration mode, you need to press **FUNCTION** and **DISPLAY** at the same time.
- 18 **LCD window:** This screen shows which device you are currently controlling (TV, CBL/SAT, VCR, DVD/BD or AUDIO).
- 19 **ENT:** Jumps to a channel after selecting with the **0–9** buttons.
- 20 **BACK:** Return to the previous channel or external input mode.
- 21 **SRND (SURROUND):** Select Surround settings.
- 22 **CH ^/** : Select the channel.
- 23 **FAVORITE CHANNEL**
A, B, C, D: Select 4 preset favorite channels in 4 different categories.
While watching, you can toggle the selected channels by pressing **A, B, C** and **D**.
- 24 **NET:** Switches the display to the Sidebar Widget, TV + Web, Web or TV screen.
- 25 **▲/▼/◀/▶,ENTER:** Select a desired item on the screen.
- 26 **RTN (RETURN):** Return to the previous menu screen.
- 27 **MENU:** Display the menu screen.
- 28 **SLP (SLEEP):** Set the sleep timer.
- 29 **FAV (FAVORITE):** Set the favorite channels.
- 30 **VIEW MODE:** Select the screen size.
- 31 **AV MODE:** Select an audio or video setting.
(When the input source is TV, INPUT 1, 2 or 3: STANDARD, MOVIE, GAME, USER, DYNAMIC (Fixed), DYNAMIC. When the input source is INPUT 4, 5, 6, 7, 8 or 9: STANDARD, MOVIE, GAME, PC, x.v.Color (INPUT4/5/6/7/8 only), USER, DYNAMIC (Fixed), DYNAMIC)
- 32 **External equipment operational buttons:** Operate the external equipment.

[3] DIMENSIONS

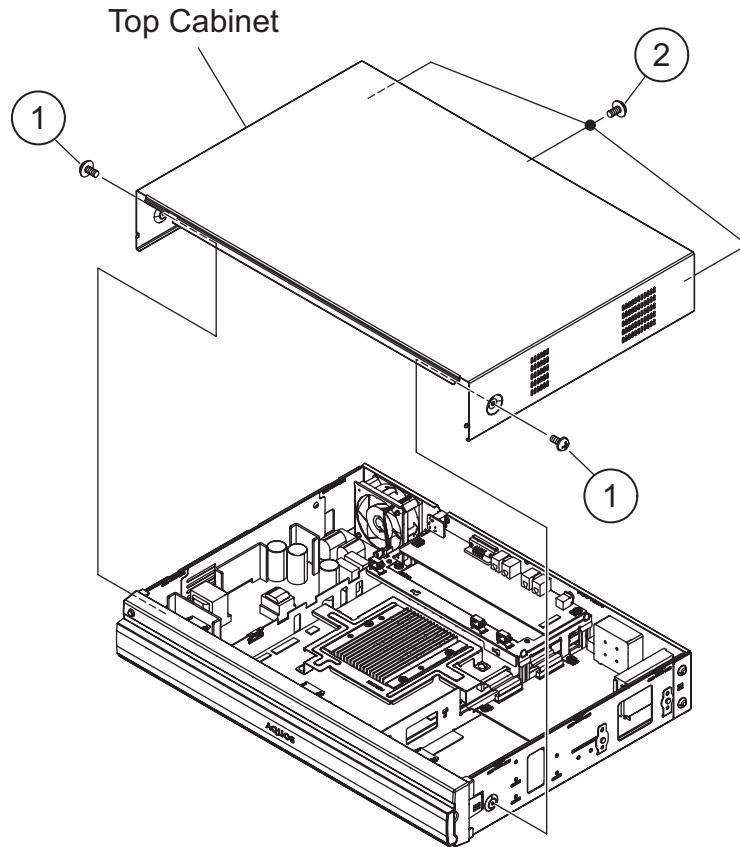

Unit: mm

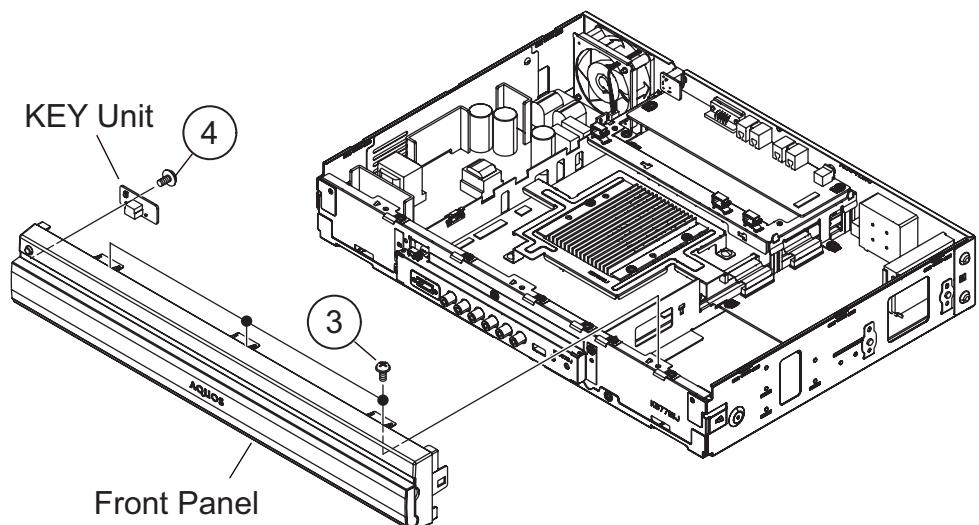

CHAPTER 2. REMOVING OF MAJOR PARTS

[1] REMOVING OF MAJOR PARTS

1. Remove the two lock screws from Top Cabinet.
2. Remove the three lock screws from Top Cabinet, and detach the Top Cabinet.

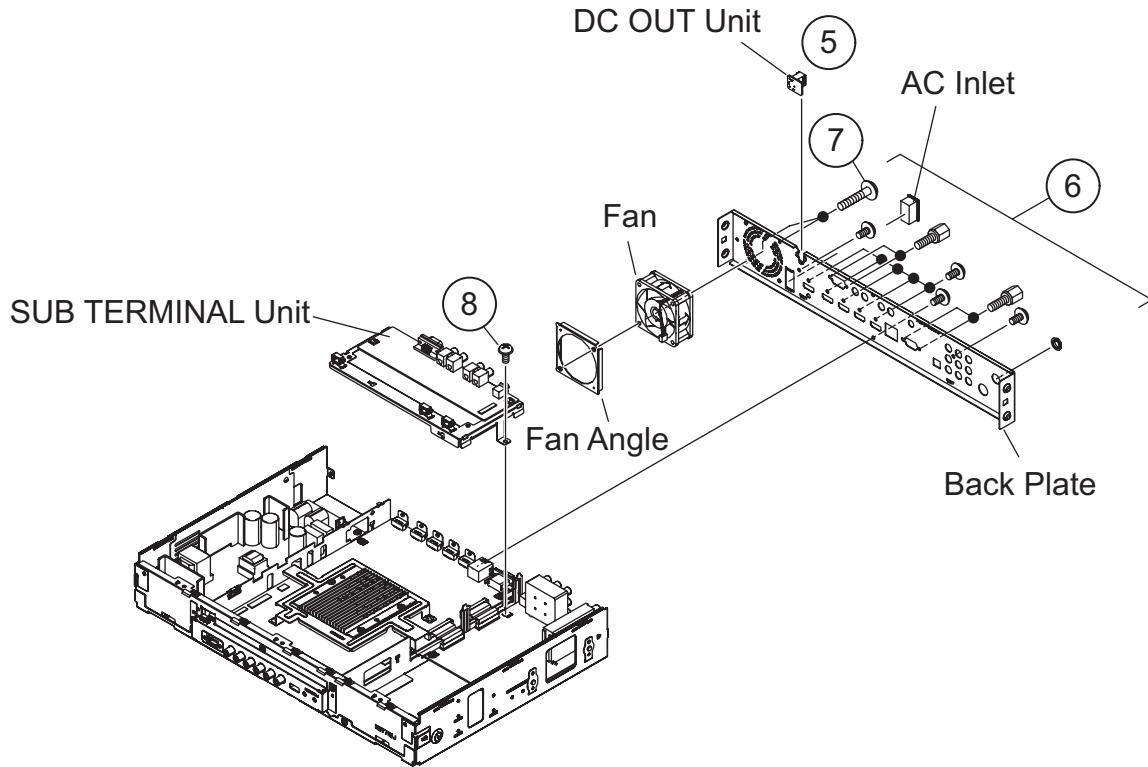

3. Remove the three lock screws from Front Panel, and detach the Front Panel.
4. Remove the one lock screw, and detach the KEY Unit from the Front Panel.

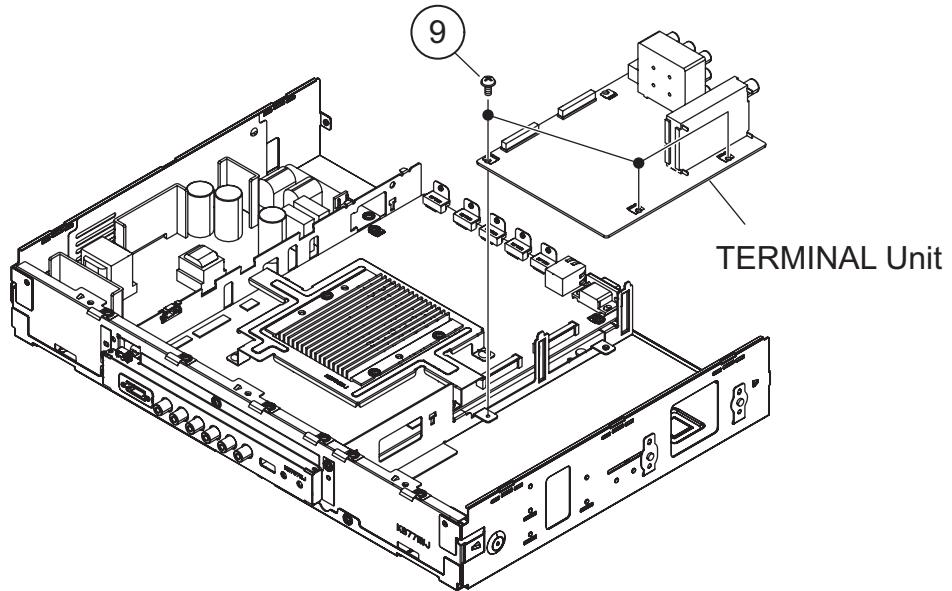

TU-X1U

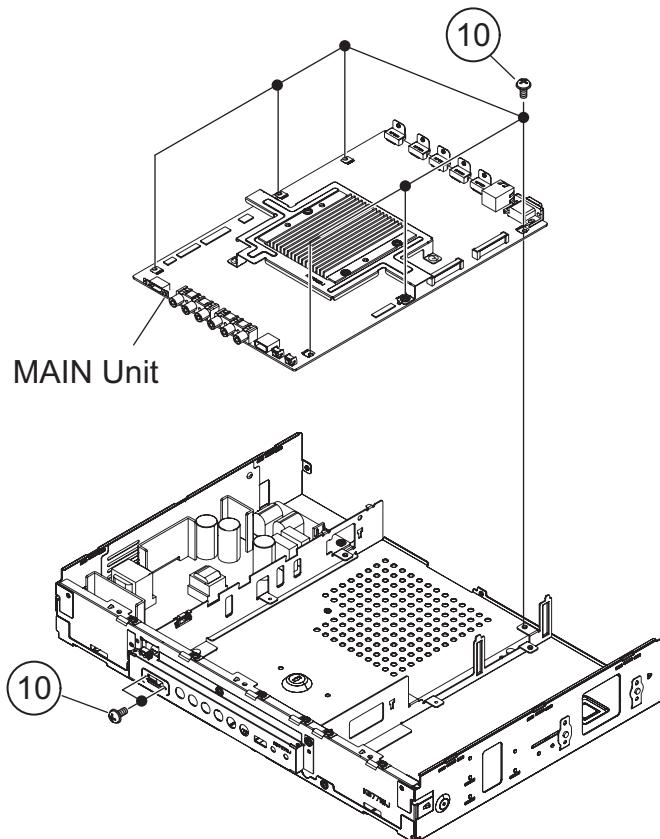

5. Remove the DC Output PWB from Rear Panel.
6. Remove the lock screws, two hexagon shaft screws, AC Inlet and one tuner nut from the Rear Panel, and detach the Rear Panel.
7. Remove the two lock screws, from the Rear Panel, and detach the Fan and Fan Angle.
8. Remove the one lock screw, and detach the Sub Terminal unit.

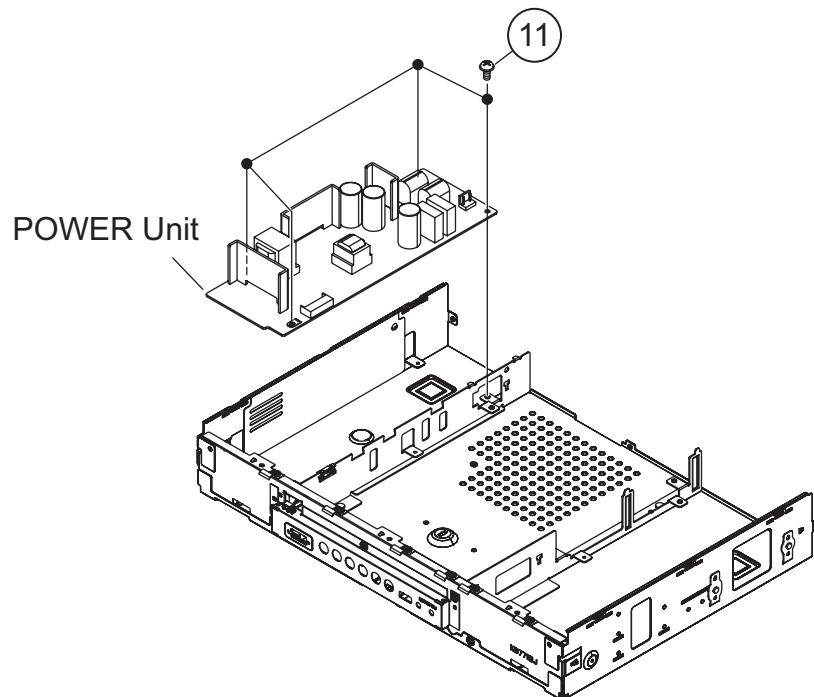

9. Remove the three lock screws from the Terminal PWB, and detach the Terminal Unit.

10. Remove the lock screws from Main Unit, and detach the Main Unit.

11. Remove the four lock screws from the Power Unit, and detach the Power Unit.

CHAPTER 3. ADJUSTMENT

[1] ADJUSTMENT PROCEDURE

The adjustment values are set to the optimum conditions at the factory before shipping. If a value should become improper or an adjustment is required due to part replacement, make an adjustment according to the following procedure.

1. After replacement of any PWB unit and/or IC for repair, please note the following.

- When replacing the following units, make sure to prepare the new units loaded with updated software.

MAIN Unit: DUNTKE760FE01

2. Upgrading of each microprocessor software

CAUTION: Never "POWER OFF" the unit when software upgrade is ongoing.

Otherwise the system may be damaged beyond recovery.

2.1. Software version upgrade

The model employs the following software.

- Main software
- Monitor microprocessor software.

The main software, monitor microprocessor software, and FRC controller software can be upgraded by using a general-purpose USB Memory.

The followings are the procedures for upgrading, explained separately for the main software, monitor microprocessor software, and FRC controller software.

2.2. Main software version upgrade

2.2.1 Get ready before you start

- USB Memory of 128MB or higher capacity.
- PC running on Windows 98/98SE/ME/2000/XP operating system.
- USB Memory reader/writer or PC with a USB port.
- The file system of a USB memory is FAT. (FAT32 is not applied)
- Use the USB memory without other functions. (lock and memory reader...etc)

2.2.2 Preparations

To upgrade the main software, it is necessary to get ready the USB Memory for version upgrade before you start.

Follow the steps below and create the USB Memory for version upgrade.

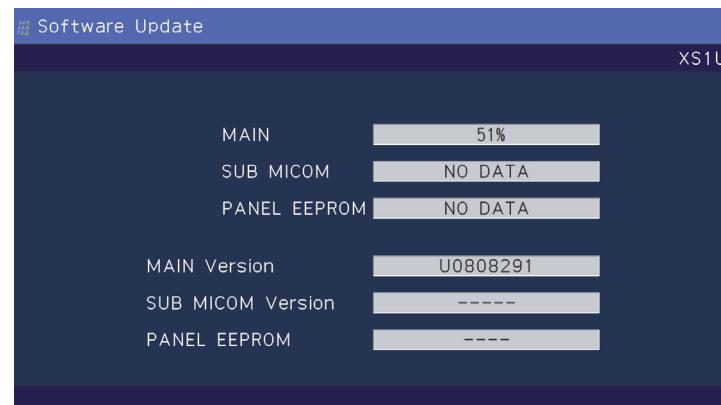

1. Copy the file XS1Uxxx.USB (named temporarily) for version upgrade to the root directory (folder) of the USB Memory.

NOTE: In the USB Memory drive, do not store other folders or unrelated files, or more than one file for version upgrade.

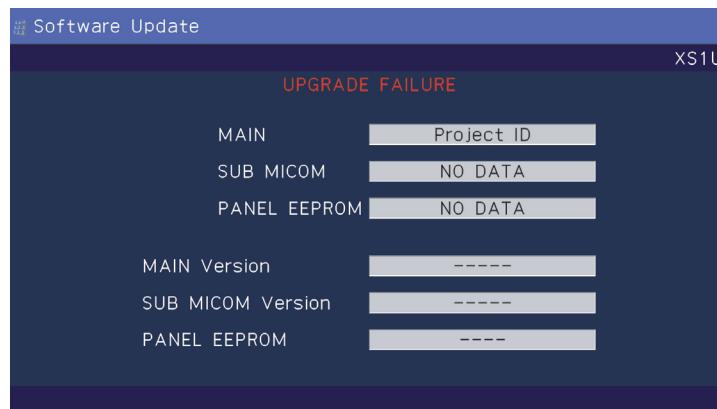

Now the USB Memory for version upgrade is ready.

2.2.3 How to upgrade the software

1. Unplug the AC cord.
2. Insert the USB Memory for version upgrade (prepared as above) into the SERVICE socket (Front panel of the AVC System).
3. Plug in the AC cord with power button pressed down after 5 seconds, unpress the power button.
4. After the unit startup, the system upgrade screen as shown below appears within 20-40 seconds.

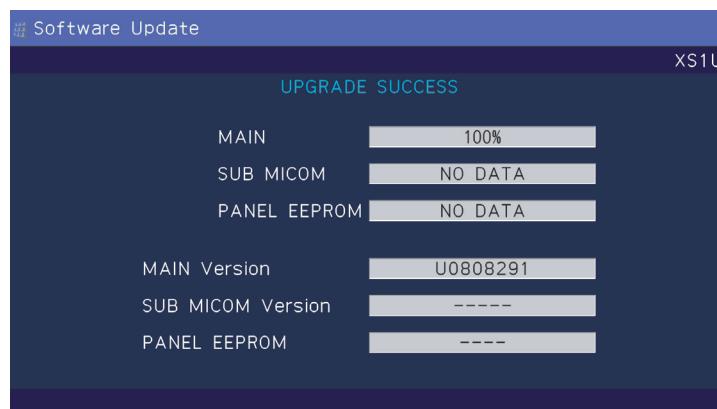

- Even a single failure in the process will trigger the upgrade failure screen.

NOTE: In the event of a failure, repeat the upgrade process. If the process repeatedly fails, it is likely that the hardware need fixing.

- Upon completion of the whole process, the upgrade success screen as shown below appears. You can check the new software version on this screen. The version information appears after the upgrade is complete.

- Unplug the AC cord and remove the USB Memory for version upgrade.

- Now the software version upgrade is complete.

NOTE: When you are done with the software version upgrade, start the set, go to the top page of the adjustment process screen and check the main software version information.

2.3. Monitor microprocessor software version upgrade

Create the USB memory for monitor microprocessor software version upgrade in the same manner as explained in the "Main software version upgrade".

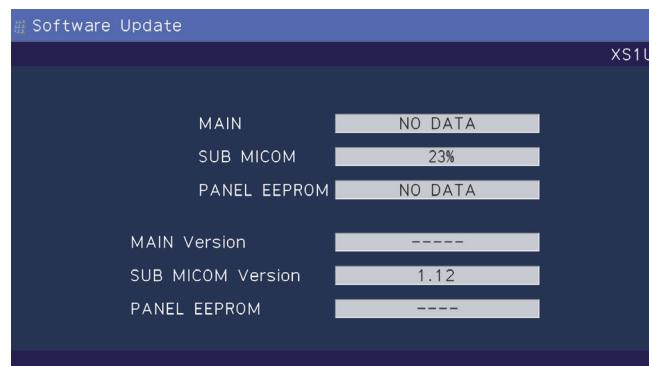

Copy the file XS1UVAxx.USB and XS1CSxxx.BIN (named temporarily) for monitor microprocessor software version upgrade to the USB memory.

2.3.1 How to upgrade the software

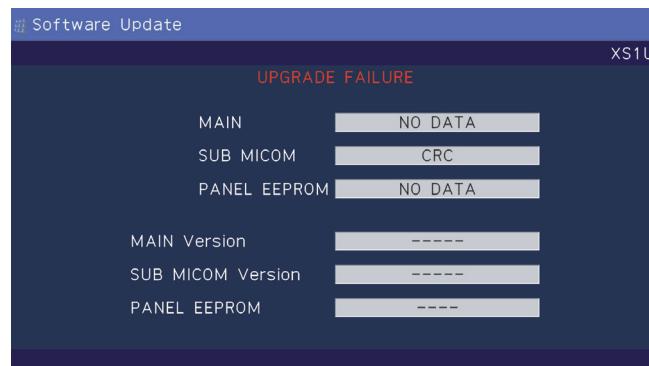

1. Unplug the AC cord.
2. Insert the USB memory for version upgrade (prepared as above) into the SERVICE socket (Front panel of the AVC System).
3. Plug in the AC cord with power button pressed down.
4. After 5 seconds, unpress the power button.

CAUTION: • The moment this operation is done, the upgrading of the monitor microprocessor software starts. While the upgrade is ongoing, never power off the unit. Otherwise the upgrade will fail and the system may be seriously damaged beyond recovery (inability to start).
• After the monitor microprocessor software is upgraded, also perform the 'Industry Init'.

5. After the unit startup, the upgrade starts. The power led will blink continuously. Also, an upgrade screen will be shown during a minor upgrade.

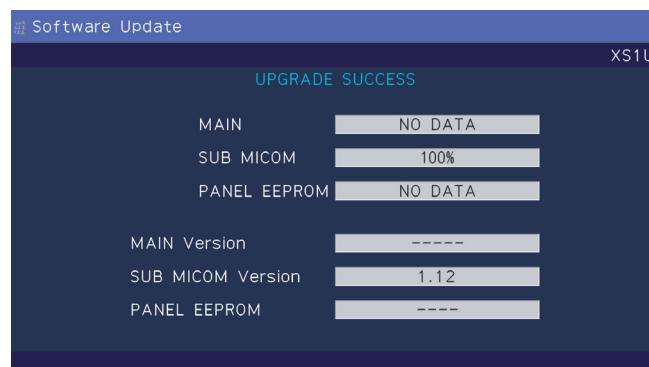

6. If the upgrade fails, power led will stop blinking. Also, the upgrade failure screen will be shown if upgrade screen was shown at 5.

NOTE: In the event of a transient failure, upgrade will be automatically retried up to three times. If the process repeatedly fails, hardware may be the cause.

7. Upon completion of the whole process, power and OPC LED will blink alternately. Also, the upgrade success screen will be shown if upgrade screen was shown at 5.

8. Unplug the AC cord and remove the USB Memory for version upgrade.

9. Now the software version upgrade is complete.

NOTE: When you are done with the software version upgrade, start the set, go to the top page of the adjustment process screen and check the monitor microprocessor software version information and panel size information.

3. Entering and exiting the adjustment process mode

- 1) Before entering the adjustment process mode, the AV position RESET in the video adjustment menu.
- 2) While holding down the "VOL (-)" and "INPUT" keys at a time, plug in the AC cord of the main unit to turn on the power.

The letter "<K>" appears on the screen.

- 3) Next, hold down the "VOL (-)" and "CH (▽)" keys at a time.

(The "VOL (-)" and "CH (▽)" keys should be pressed and held until the display appears.)

Multiple lines of blue characters appearing on the display indicate that the unit is now in the adjustment process mode.

When you fail to enter the adjustment process mode (the display is the same as normal startup), retry the procedure.

- 4) To exit the adjustment process mode after the adjustment is done, unplug the AC cord from the outlet to make a forced shutdown. (When the power was turned off with the remote controller, once unplug the AC cord and plug it again. In this case, wait 10 seconds or so before plugging.)

CAUTION: Use due care in handling the information described here lest your users should know how to enter the adjustment process mode. If the settings are tampered in this mode, unrecoverable system damage may result.

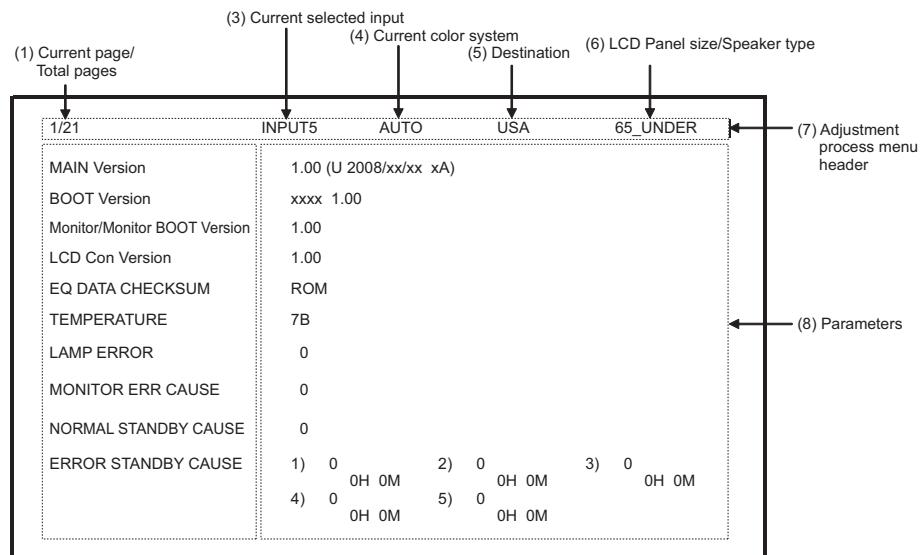

4. Remote controller key operation and description of display in adjustment process mode

- 1) Key operation

Remote controller key	Main unit key	Function
CH (▽ / △)	CH (▽ / △)	Moving an item (line) by one (UP/DOWN)
VOL (+/-)	VOL (+/-)	Changing a selected item setting (+1/-1)
Cursor (UP/DOWN)	-----	Turing a page (PREVIOUS/NEXT)
Cursor (LEFT/RIGHT)	-----	Changing a selected line setting (+10/-10)
INPUT	-----	Input switching (toggle switching) (TUNER→INPUT1→INPUT2→INPUT3→INPUT4→INPUT5→INPUT6→INPUT7)
ENTER	-----	Executing a function

*Input mode is switched automatically when relevant adjustment is started so far as the necessary input signal is available.

- 2) Description of display

5. List of adjustment process mode menu

The character string in brackets [] will appear as a page title in the adjustment process menu header.

6. Special features

- * STANDBY CAUSE (Page 1/21)

Display of a cause (code) of the last standby

The cause of the last standby is recorded in EEPROM whenever possible.

Checking this code will be useful in finding a problem when you repair the troubled set.

- * EEP SAVE (Page 36/21)

Storage of EEP adjustment value

- * EEP RECOVER (Page 36/21)

Retrieval of EEP adjustment value from storage area

7. Video signal adjustment procedure

*Adjustment process mode menu is listed in section 5.

7.1. Signal check

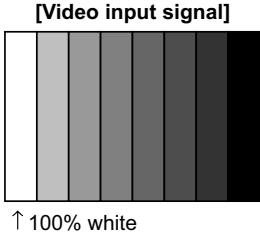

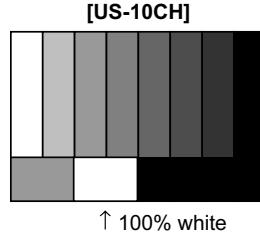

Signal generator level adjustment check (Adjustment to the specified level)

- Composite signal : 0.714Vp-p ± 0.02Vp-p (Pedestal to white level)
- 15K component signal : Y level : 0.714Vp-p ± 0.02Vp-p (Pedestal to white level)
PB, PR level : 0.7Vp-p ± 0.02Vp-p
- 33K component signal : Y level : 0.7Vp-p ± 0.02Vp-p (Pedestal to white level)
PB, PR level : 0.7Vp-p ± 0.02Vp-p
- Analog RGB : RGB level : 0.7Vp-p ± 0.02Vp-p (Pedestal to white level)

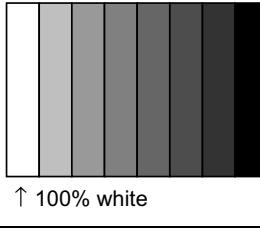

7.2. Entering the adjustment process mode

Enter the adjustment process mode according to the steps described in section 3.

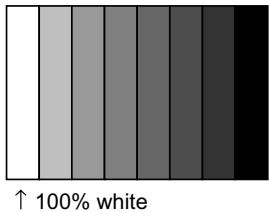

7.3. N358 composite signal adjustment (Tuner)

	Adjustment item	Adjustment conditions	Adjustment procedure
1	Adjustment	N358 signal	<p>Feed the NTSC (3.58) split field color bar signal (75% color saturation) to VIDEO 1 input. Feed the RF signal (by use of US-10ch) to TUNER-A.</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  <p>[Video input signal]</p> <p>↑ 100% white</p> </div> <div style="text-align: center;">  <p>[US-10CH]</p> <p>↑ 100% white</p> </div> </div>
2	Auto adjustment performance	Page 3/36	<p>Bring the cursor on [•N358 ALL ADJ] and press [ENTER].</p> <p>[•N358 ALL ADJ FINISH] appears when finished.</p>

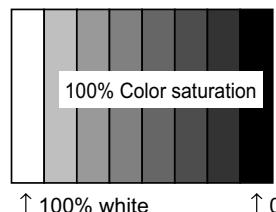

7.4. Component 15K signal adjustment

	Adjustment item	Adjustment conditions	Adjustment procedure
1	Adjustment	480i signal	<p>Feed the 100% color bar signal to INPUT 1 component input.</p> <div style="text-align: center;">  <p>↑ 100% white</p> </div>
2	Auto adjustment performance	Page 5/36	<p>Bring the cursor on [•COMP 15K ADJ] and press [ENTER].</p> <p>[•COMP 15K ADJ FINISH] appears when finished.</p>

7.5. Component 33K signal adjustment

	Adjustment item	Adjustment conditions	Adjustment procedure
1	Adjustment	1080i signal	Feed the 100% color bar signal to INPUT 1 component input.  ↑ 100% white
2	Auto adjustment performance	Page 6/36	Bring the cursor on [•COMP 33K ADJ] and press [ENTER]. [•COMP 33K ADJ FINISH] appears when finished.

7.6. Analog RGB signal adjustment

	Adjustment item	Adjustment conditions	Adjustment procedure
1	Adjustment	Analog RGB signal: XGA (1024 x 768) 60Hz SYNC: HV separate	Feed the XGA 100% color bar signal to ANALOG RGB input.  ↑ 100% white ↑ 0% black 100% Color saturation XGA 100% color bar
2	Auto adjustment performance		Bring the cursor on [•ANALOG RGB ADJ] and press [ENTER]. [•ANALOG RGB ADJ OK] appears when finished.

7.7. Tuner/V-Chip test

	Adjustment item	Adjustment conditions	Adjustment procedure
1	Adjustment	NTSC RF signal US-7 (AIR) ch	Feed the NTSC signal to RF ANTENNA input.
2	Auto adjustment performance		Bring the cursor on [•TUNER VCHIP TEST (*07ch)] and press [ENTER]. (*Select the channel according to the RF signal.) [•A-OK (**.**) / VM-OK] appears in blue when finished. (If [A-NG / VM-NG] appears in yellow or red, the test is incomplete.) Make sure a displacement of ±0.0625 MHz from the center frequency is acceptable.

8. Initialization to factory settings

CAUTION: When initialization is performed, all user setting data including the channel settings are initialized. Be cautious when making this adjustment.

(The adjustments done in the adjustment process mode are not initialized.)

	Adjustment item	Adjustment conditions	Adjustment procedure
1	Initialization	It turns off with AC power supply.	<p>Enter the adjustment process mode. Bring the cursor on to [INDUSTRY INIT] in page 2/21. Set to [ON] using [VOL] key, and press [ENTER] to execute the initialization. When the version number screen shows up on the green background and "SUCCESS" gets displayed at the top on screen, it means the procedure has been successfully carried out. (If an error occurs, "ERROR" is displayed on the red background.)</p> <ul style="list-style-type: none"> • Turn off the AC power. *Never shut off the power during the initialization process. <p>The following settings are initialized in this adjustment.</p> <ol style="list-style-type: none"> 1) User setting 2) Channel data (e.g. broadcast frequencies) 3) Password data 4) Operation time 5) Auto installation flag 6) V-CHIP block setting

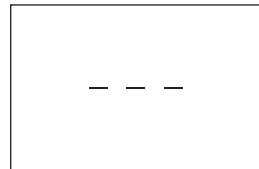

After the adjustment, cancel the adjustment process mode.

To exit the adjustment process mode, unplug the AC power cable from the outlet to make a forced shutdown. (When the power was turned off with the remote controller, once unplug the power cable and plug it again. In this case, wait 10 seconds or so before plugging.)

[2] PUBLIC MODE SETTING PROCEDURE

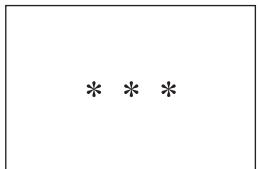

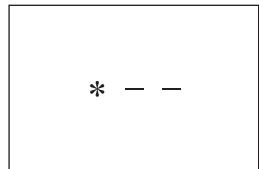

1. How to start Public Mode

- There are the following two ways to get the public mode setup screen displayed.
- ① In the adjustment process mode, turn on "PUBLIC MODE". Also press the "CH (\wedge)" and "VOL (+)" keys on the set at once and turn on the power.
 - ② 1) Press the "INPUT" and "VOL +" keys on the set at once and turn on the power.
2) Get the password input screen displayed.

Procedure

- The input starts with the leftmost digit.
- Use the numeric keys [1] thru [9] and [0] keys on the remote controller.
The other keys are not acceptable.
- With a numeric-key input, "-" will change to "*".
The input position will move one digit to the right.
- With all the 3 digits entered, the password will be verified.

3) The 3-digit password is now verified.

The password [0] [2] [7] provides for the public mode screen. (This screen comes on with whatever adjustment process settings.)

With any other passwords, the screen changes to the normal mode.

2. How to exit Public Mode

There are the following ways to quit the public mode setup screen.

- Turn off "PUBLIC MODE" in the adjustment process mode. (☆) ← This way alone is not for quitting the setup screen, but for quitting the mode itself.
 - Turn off the power with the "POWER" key. (★)
 - Select "EXECUTE". (★)
- ★ ... "PUBLIC MODE" stays on in the adjustment process mode.
- ☆ ... The settings will be back to the factory ones.

3. Public Mode Setting Values

- With the factory settings made, the public mode settings get initialized. (The adjustment process remains intact.)

4. Public Mode Menu

The guidance is not displayed onscreen.

Setup procedure

- To move the cursor up and down, use the “cursor UP/DOWN” key (remote controller) and “CH (\wedge)/(\vee)” key (remote controller and set).
- To change the settings, use the “cursor RIGHT/LEFT” key (remote controller) and “VOL (+)/(-)” key (remote controller and set).
- To save new settings, keep the cursor at “EXECUTE” and use “ENTER” key (remote controller and set).

PUBLIC MODE	
POWER ON FIXED	[VARIABLE]

5. On Setting Items

* "EZ-SETUP" discussed below indicates "EZ-SETUP after the first power-on".

1) POWER ON FIXED

Selection	Selection between "Variable" and "Fixed" (loop provided)
Default	– (Variable)
Explanation	In "Fixed" setting, the power-off by the power key of the unit is invalidated and the image is kept being received. The power can be turned off by stopping the power supply from AC.
Limit in Setting	Refer to the "Power-On Fixed" sheet.
Exception	None
Remarks	<ul style="list-style-type: none"> In "Variable" setting, the power operation is in wait for 1 sec. and then turned off when the main power switch is off.

2) MAXIMUM VOLUME

Selection	Adjustment from 0 to 60 (no loop)
Default	60
Explanation	Sound volume can not be adjusted higher than the preset value.
Limit in Setting	<ul style="list-style-type: none"> When the sound volume is set lower than 59, only figures are displayed and the sound volume bar is not displayed. The maximum sound volume for ON-timer (Wake up timer) is limited also to the preset value.
Exception	
Remarks	<ul style="list-style-type: none"> When the sound volume is set higher than the MAX setting by the adjusting process, the sound volume control operation is prohibited for turn-up and the sound volume should be turned down to MAX in this state.

3) VOLUME FIXED

Selection	Selection between "Variable", "Fixed", "ACON (AC CTRL)" and "AC/RCON (AC/RC CTRL)" (loop provided)
Default	Variable
Explanation	<ul style="list-style-type: none"> FIXED: Fixed at the level adjusted for a fixed volume. AC CTRL: Start-up at the level specified for a fixed volume at ACON. AC/RC CTRL: Start-up at the level specified for a fixed volume at start.
Limit in Setting	<ul style="list-style-type: none"> The sound volume for the ON-timer (Wake up timer) is fixed also without display of menu. Besides, the setting is made impossible. (Basically, the menu is not displayed.) The following keys become invalid: <ul style="list-style-type: none"> Sound volume Up/Down (VOL +/-) [for both remote control and the unit] Mute (MUTE)
Exception	<ul style="list-style-type: none"> In the item "VOLUME" of adjustment process, the sound volume can be set freely irrespective of this setting.
Remarks	<ul style="list-style-type: none"> As for sound volume fixing and sound volume MAX level, the sound volume fixing has priority. Once the sound volume has been changed by adjustment process, it should be set back to the sound volume preset by sound volume fixing level when the adjustment process ends.

4) VOLUME FIXED LEVEL

Selection	Adjustment from 1 to 60 (no loop)
Default	60
Explanation	The sound volume to be fixed by "Volume fixed" is determined.
Limit in Setting	None
Exception	None
Remarks	Setting is valid only when "Volume fixed" is selected for "fixed".

5) R/C BUTTON

Selection	Selection between "Respond", "No Respond" and "Limited" (loop provided)
Default	Respond
Explanation	<p>Making the remote controller settings.</p> <ul style="list-style-type: none"> At the "No Respond" setting, the remote controller keys are disabled. Its power key (reception/standby key) is disabled too. At the "Limited" setting, some channel-related keys alone are operative. All the other remote controller keys (power, volume ▲ / ▼, channel ▲ / ▼, light control (brightness sensor), broadcast select) are inoperative.
Limit in Setting	<ul style="list-style-type: none"> In "No respond" setting, all the keys (including the power key) are not accepted.
Exception	<ul style="list-style-type: none"> Adjustment process, inspection process and hotel only keys are valid irrespective of setting. All the keys can be used in adjustment process, inspection mode and hotel menu irrespective of setting.
Remarks	

6) PANEL BUTTON

Selection	Selection between "Respond" and "No respond" (loop provided)
Default	Respond
Explanation	All the operations by keys (except the power key) of the unit can be invalidated.
Limit in Setting	
Exception	<ul style="list-style-type: none"> • Adjustment process, inspection mode and hotel menu mode can be started irrespective of setting. • All the keys can be used in adjustment process, inspection mode and hotel menu irrespective of setting.
Remarks	

7) MENU BUTTON

Selection	Selection between "Respond" and "No respond" (loop provided)
Default	Respond
Explanation	In "No respond" setting, the menu operation by the menu key of the remote control and the menu key of the unit are invalidated.
Limit in Setting	
Exception	<ul style="list-style-type: none"> • Adjustment process, inspection mode and hotel menu mode can be started irrespective of setting. • All the keys can be used in adjustment process, inspection mode and hotel menu irrespective of setting.
Remarks	

8) ON SCREEN DISPLAY

Selection	Selection between "Yes", "No" (loop provided)
Default	Yes
Explanation	<ul style="list-style-type: none"> • At the "No" setting, the following items are not displayed onscreen: register, setting, adjustment menu, channel call and volume bar. On the wide-screen models, an input selection is immediately made because the menu is not displayed. • At the "Limited" setting, some items cannot be displayed onscreen. On the Japan-destined models, the channel call "Message" alone cannot be displayed. (This is because the channel call message may be confused with a message being sent from the hotel.) On the North America-destined models, the OSD works the same as at the "No" setting.
Limit in Setting	<ul style="list-style-type: none"> • Keys falling under any of the following items become invalid. <ul style="list-style-type: none"> ① Appearance of screen changes and the sound changes. ② Personal functions which are hard to restore. <p>Screen display, menu, OFF-timer, ON-timer, AV MODE, screen size switching, clock setting, treble emphasis, AUDIO ONLY, sound changeover, LANGUAGE, CLOSED CAPTION</p>
Others	<ul style="list-style-type: none"> • Simple input switching is generated. Those which are restored soon after leaving as they are and may be requested for change by customer are not prohibited. Brightness sensor (BACKLIGHT) and PIC. FLIP
Exception	<ul style="list-style-type: none"> • Such a caution which is displayed independently is displayed as it is. Non-responding signal caution
Remarks	<ul style="list-style-type: none"> • When CC has already been ON, CLOSED CAPTION is displayed.

9) INPUT MODE START

Selection	Selection between "Normal", "Air (*)" "INPUT 1/2/3" "HDMI 1/2/3" "DVI" (loop provided)
Default	Normal
Explanation	In power-ON, the input source to be started or channel can be set. (In standard mode, the operation follows the last memory.)
About options	<ul style="list-style-type: none"> • All the input sources in the model are made selectable. • In TV mode, the channel to be set follows the last memory and the content of the last memory is included in the notation by options. Ex.) Air (2), Cable (98.1) etc.
Limit in Setting	<ul style="list-style-type: none"> • The display of channel setting menu and the channel setting operation are prohibited.
Exception	
Remarks	<ul style="list-style-type: none"> • In setting at "Normal", the setting of "Input mode fixed" is changed to "Variable" and selection should be prohibited.

TU-X1U

10) INPUT MODE FIXED

Selection	Selection between "Variable", "Fixed", "ACON (AC CTRL)" and "AC/RCON (AC/RC CTRL)" (loop provided)
Default	– (Variable)
Explanation	<ul style="list-style-type: none"> At the "Fixed" setting, the TV set gets started with the settings of "Input mode start", and then any other channels and inputs are not accepted. At the "ACON (AC CTRL)" setting, the TV set gets started with the settings of "Input mode start" under AC control. At the "AC/RCON (AC/RC CTRL)" setting, the TV set gets started with the settings of "Input mode start" under either control.
Limit in Setting	<ul style="list-style-type: none"> With the execution of hotel mode, the input source is forced to change to that set by "Input mode start" and the channel switching and input switching are prohibited thereafter. ON-timer's (Wake-up timer) channel items are not displayed or the operation is prohibited. (Basically, they are not displayed.) The following keys are invalidated. CH ▲ / ▼, direct tuning button, FLASHBACK, input *However, the keys (input switching and CH ▲ / ▼ keys) of the unit for menu operation remain valid.
Exception	None
Remarks	<ul style="list-style-type: none"> In the following case, setting is cancelled and mode is changed to "Variable". ① When the setting of "Input mode start" is set to "Normal".

11) RC_PATH_THROUGH

Selection	Selection between "OFF", "ON: TV RCE" and "ON: TV RCD" (loop provided)
Default	OFF
Explanation	Function to feed the remote controller-received signal to Pin 9 (open) on the RS232C.
Limit in Setting	None
Exception	None
Remarks	None

12) AV POSITION FIXED

Selection	Selection between "Variable" and "Fixed" (loop provided)
Default	Variable
Explanation	<p>In case of "Fixed" setting,</p> <ul style="list-style-type: none"> – Menu "Picture" and "Audio" setting can't be changed like "Dynamic (Fixed)". – When "AV Mode" key is pressed, TV just displays current AV Mode (cannot be changed.).
Limit in Setting	None
Exception	None
Remarks	<ul style="list-style-type: none"> • When receiving with AV Position key, OPC, Dolby key and other direct audio select keys, the current display stays on and no setting can be changed. • Even by initializing personal information, the hotel-mode settings are kept intact. In this way, the AV positions, video and audio adjustment settings are not initialized.

13) LOUD SPEAKER (ON/OFF)

Selection	Selection between "ON" and "OFF" (loop provided)
Default	ON
Explanation	If "OFF" is selected, TV stops Speaker output even without Headphone connected.
Limit in Setting	None
Exception	None
Remarks	<ul style="list-style-type: none"> • Press the volume UP/DOWN key, and the mute icon appears for 4 seconds. • The mute key and audio-related keys are displayed with caution. • Usually, the headphones and monitor audio outputs can be adjustable.

14) 232C POWON

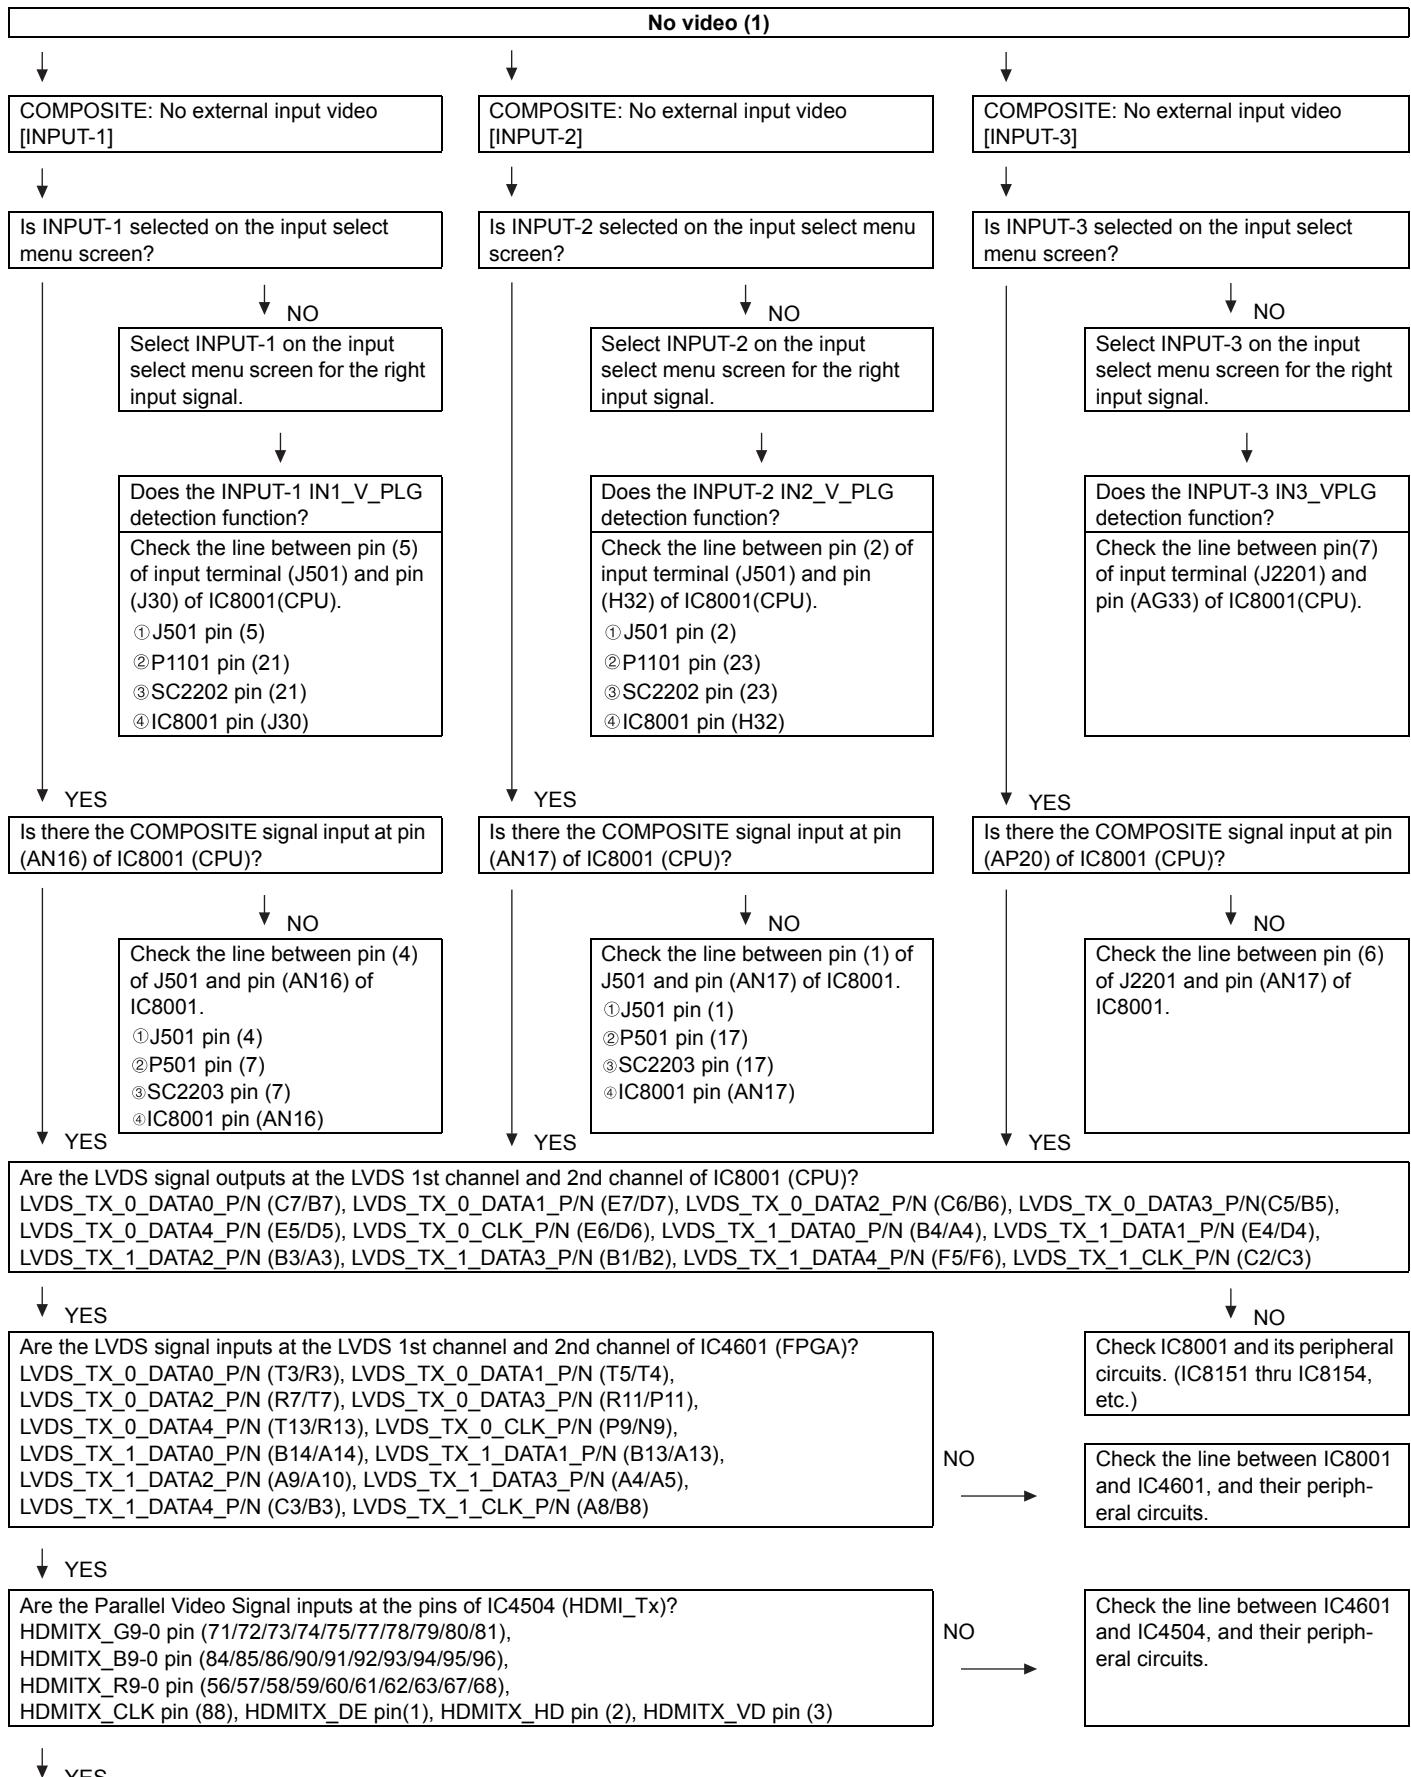

Selection	Selection between "Disable" and "Enable" (loop provided)
Default	Disable
Explanation	In the standby mode, the power-on by the 232C command is enabled or disabled.
Limit in Setting	None
Exception	None
Remarks	None

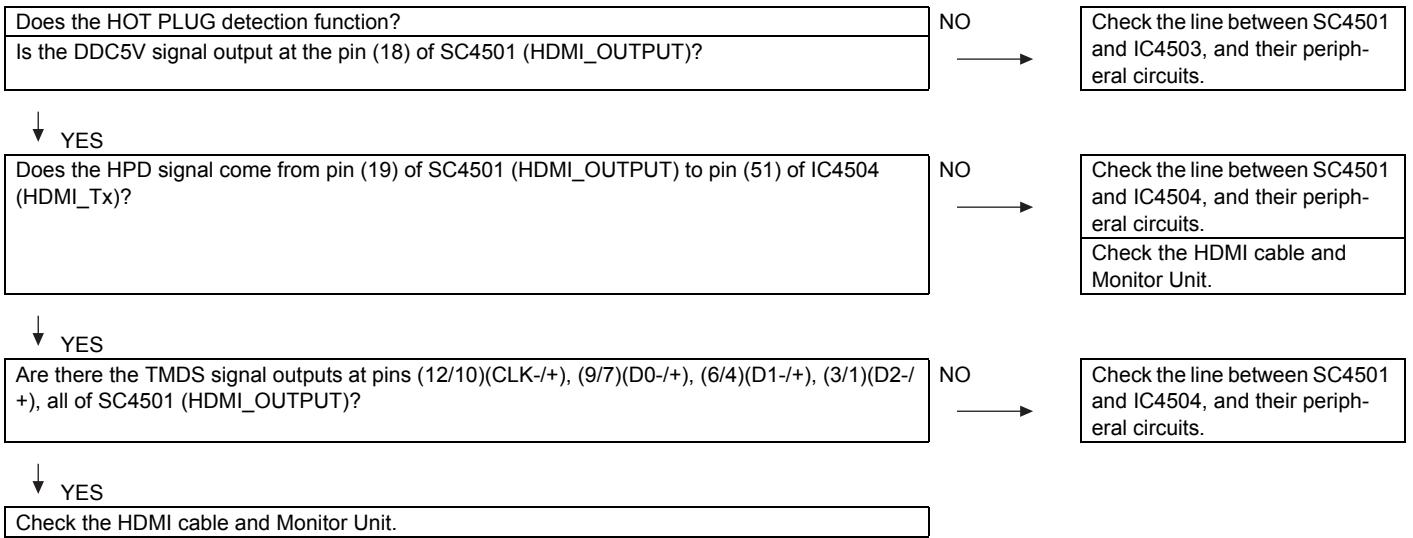

15)PUBLIC MODE (ON/OFF)

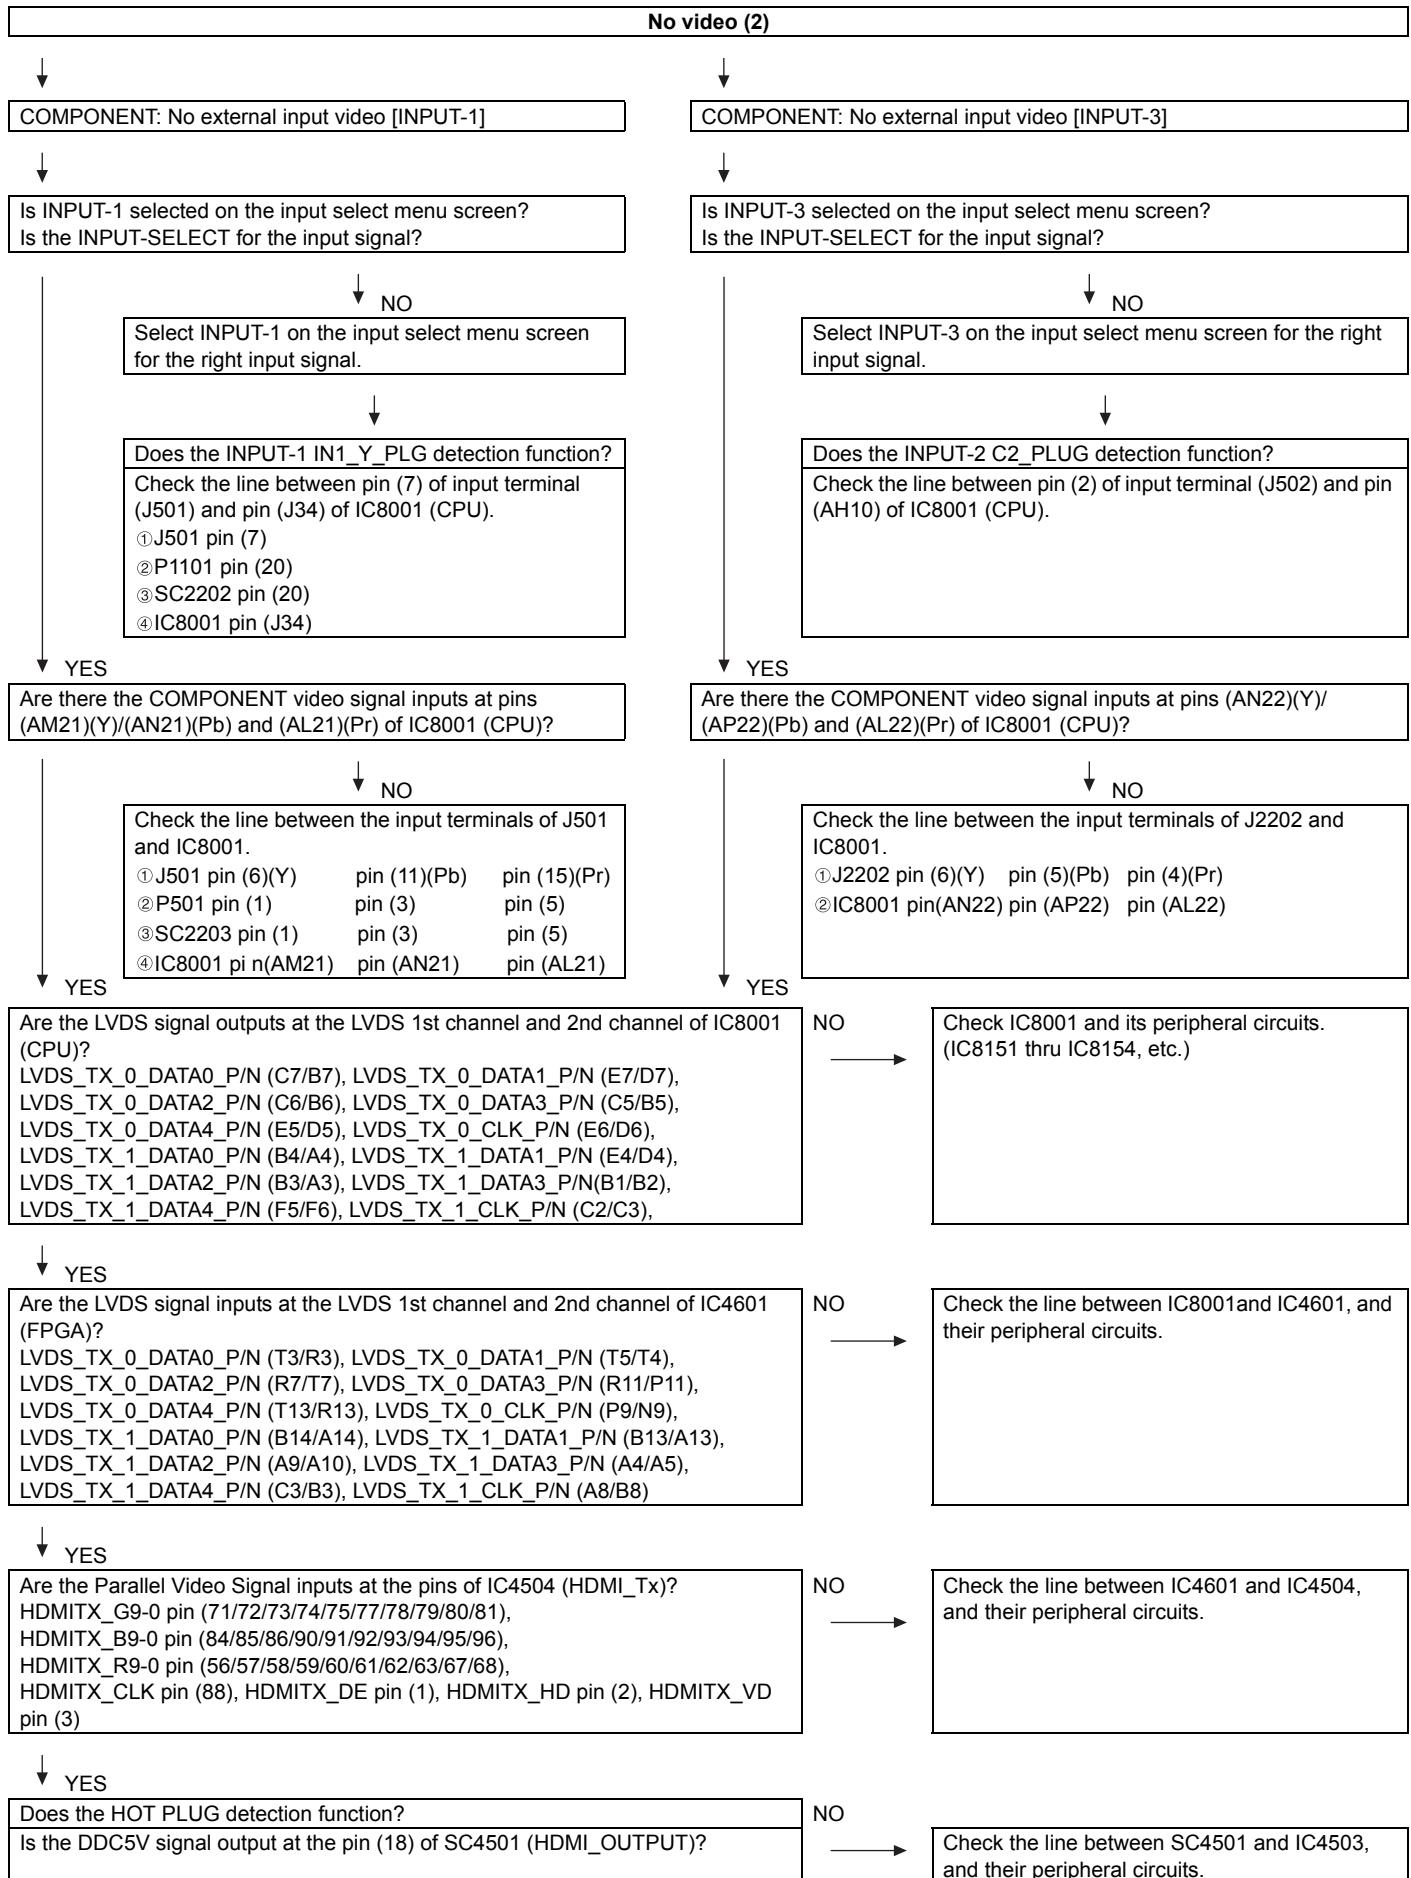

Selection	Selection between "ON" and "OFF" (loop provided)
Default	OFF
Explanation	In case of "ON", public mode settings are effected.
Limit in Setting	None
Exception	None
Remarks	The public-mode settings are operable only when this item is set at ON.

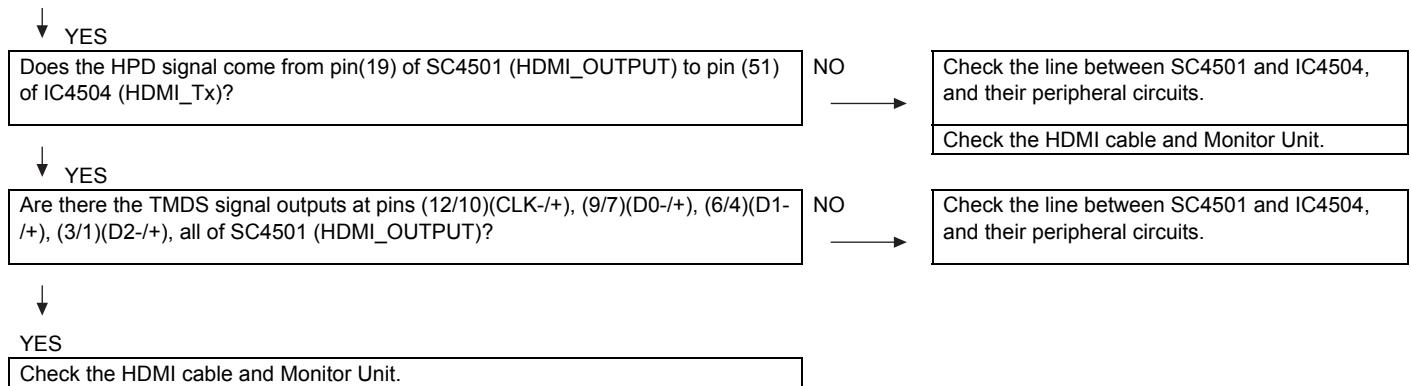

CHAPTER 4. TROUBLESHOOTING TABLE

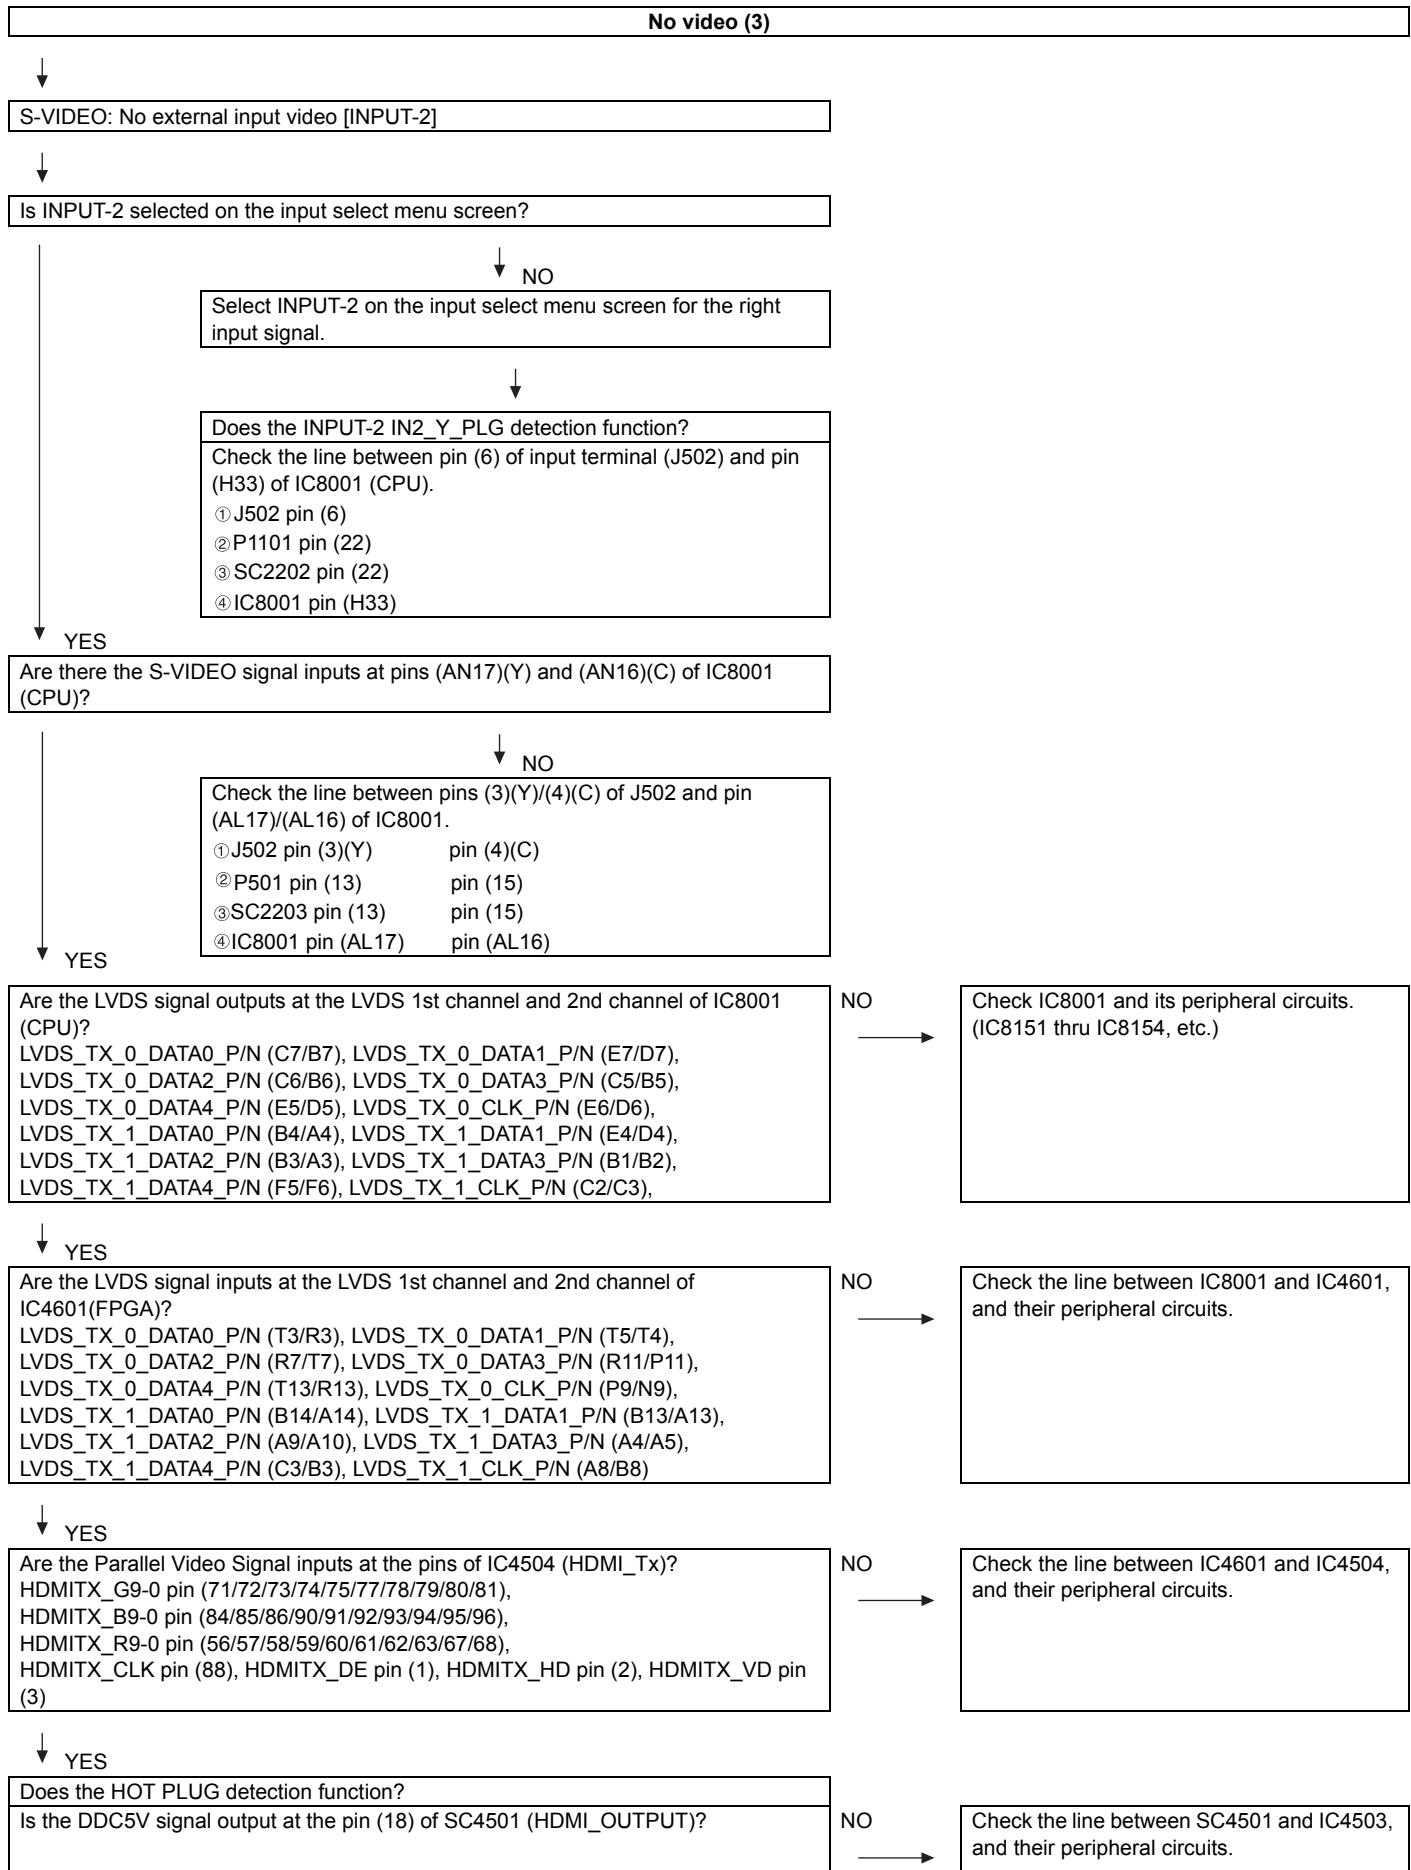

[1] TROUBLESHOOTING TABLE

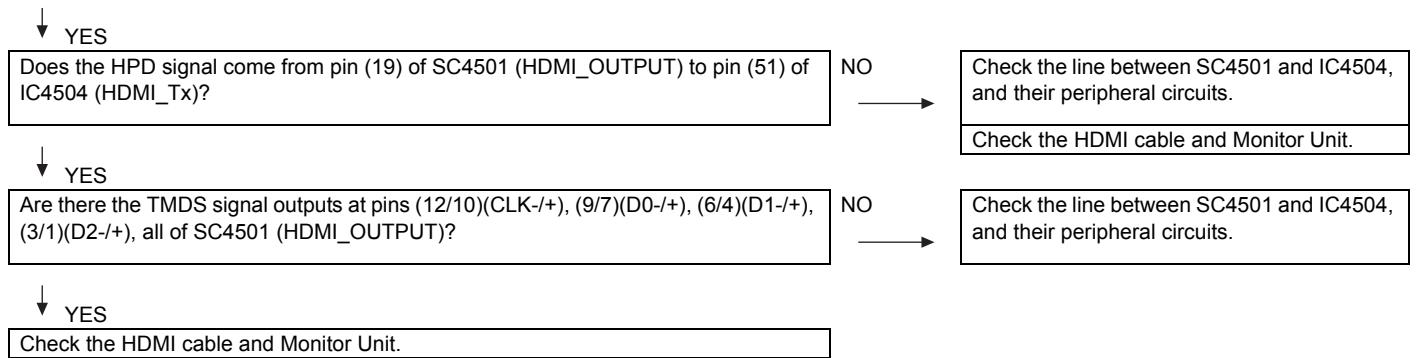

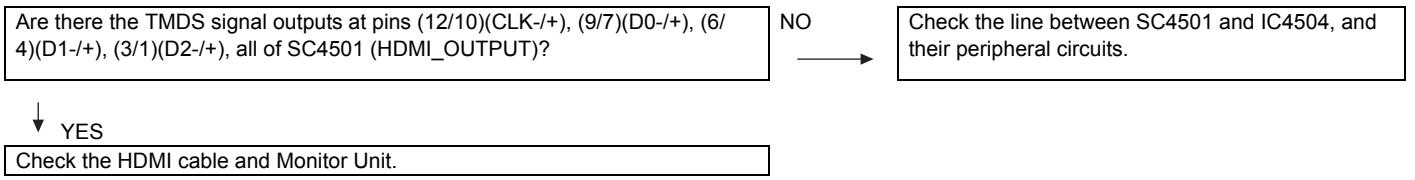

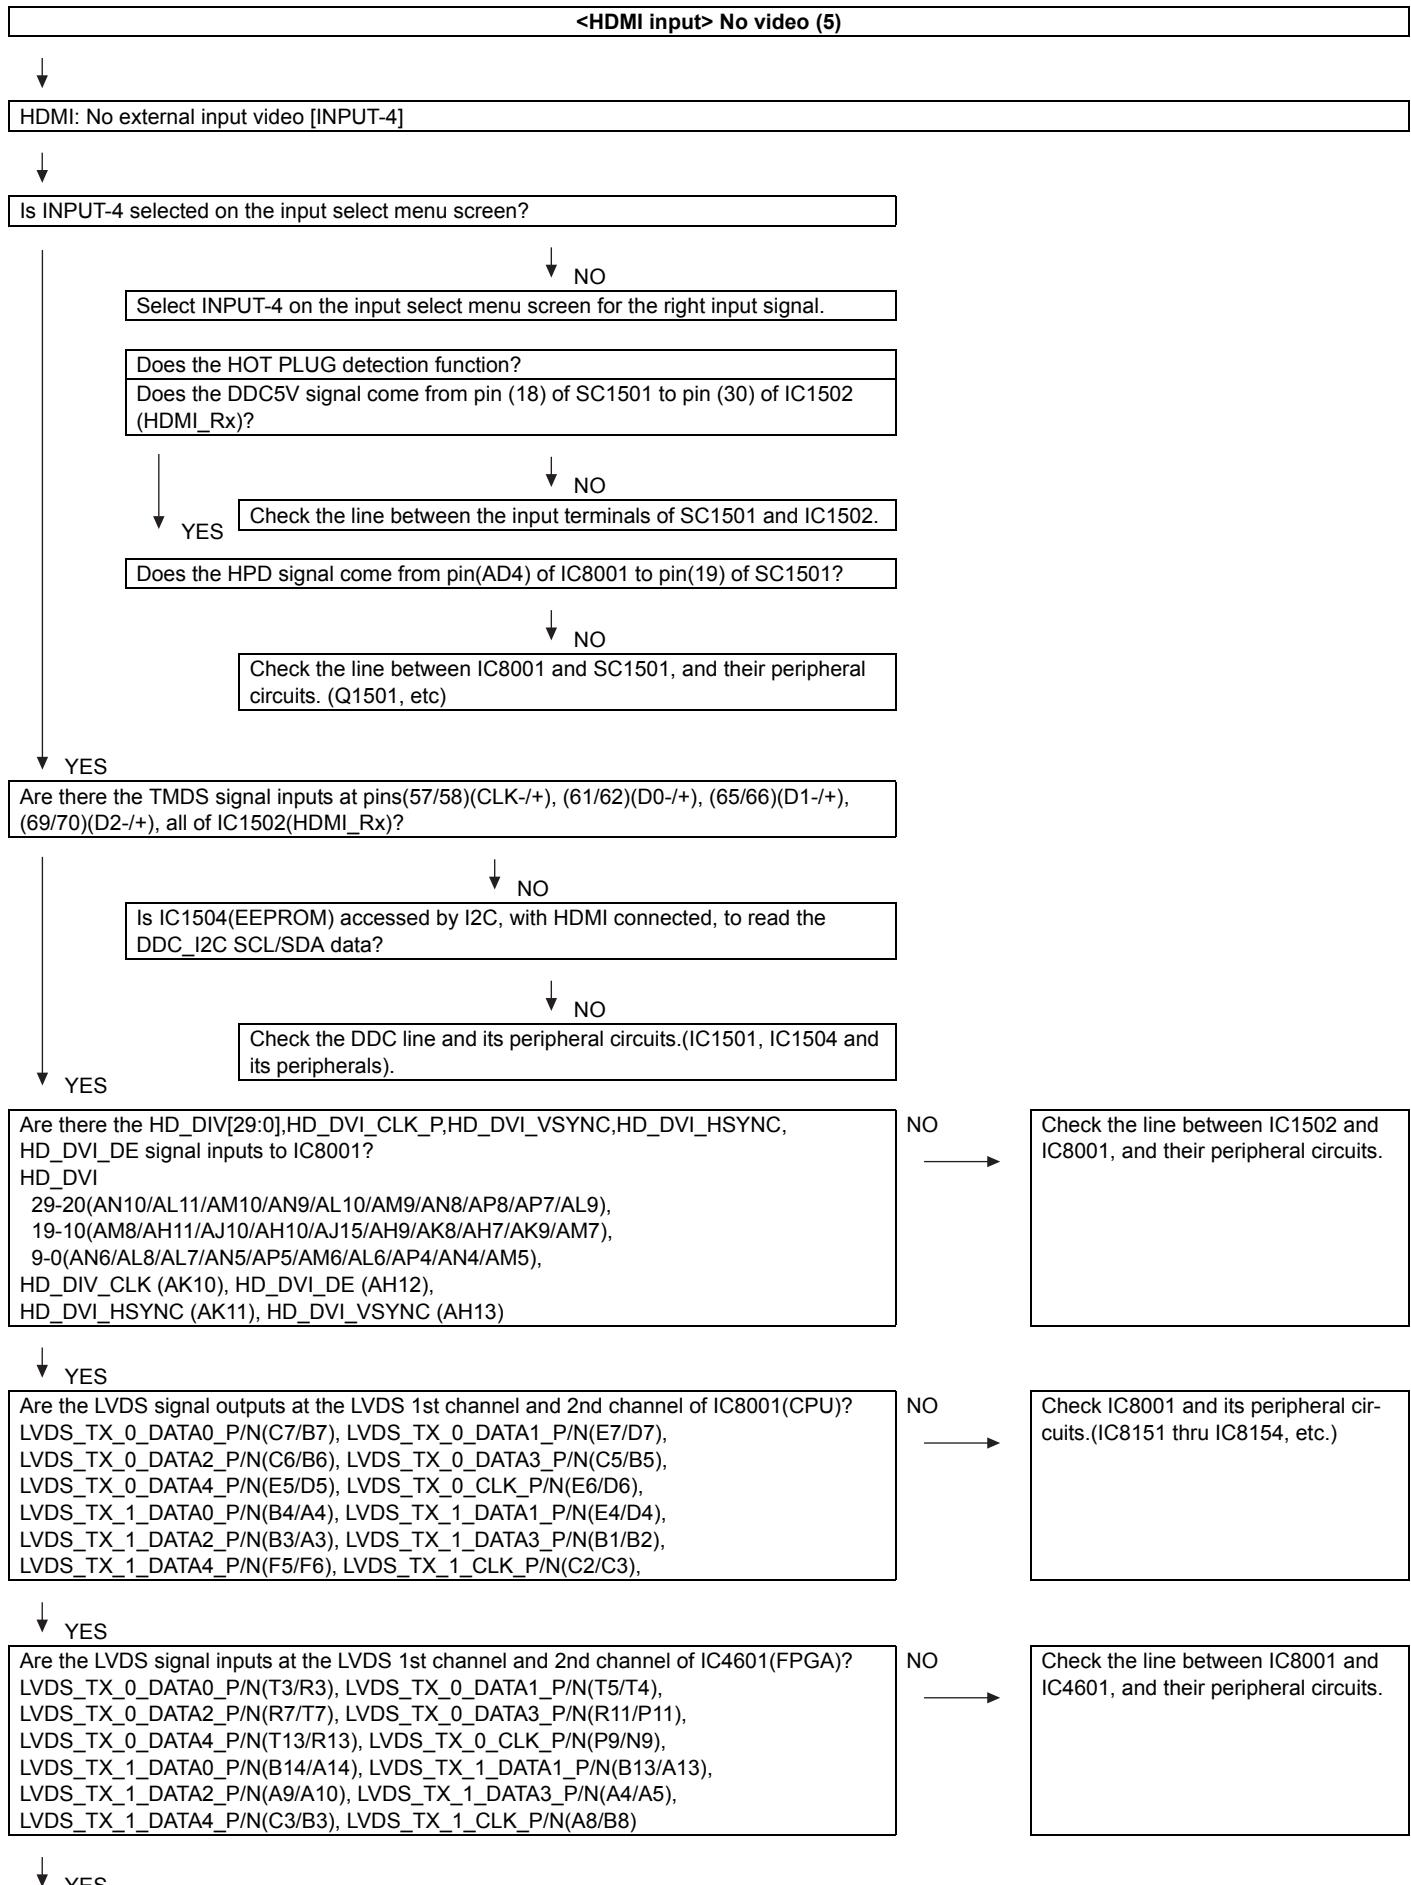

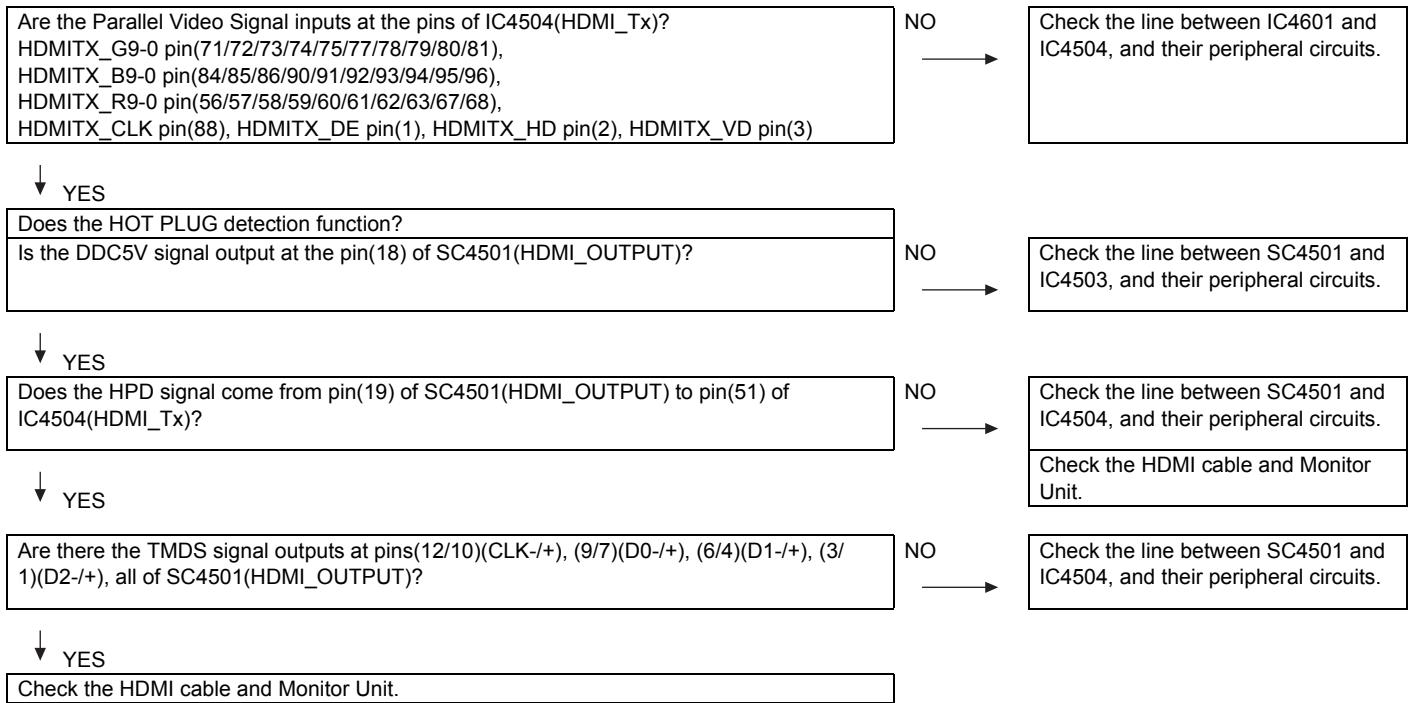

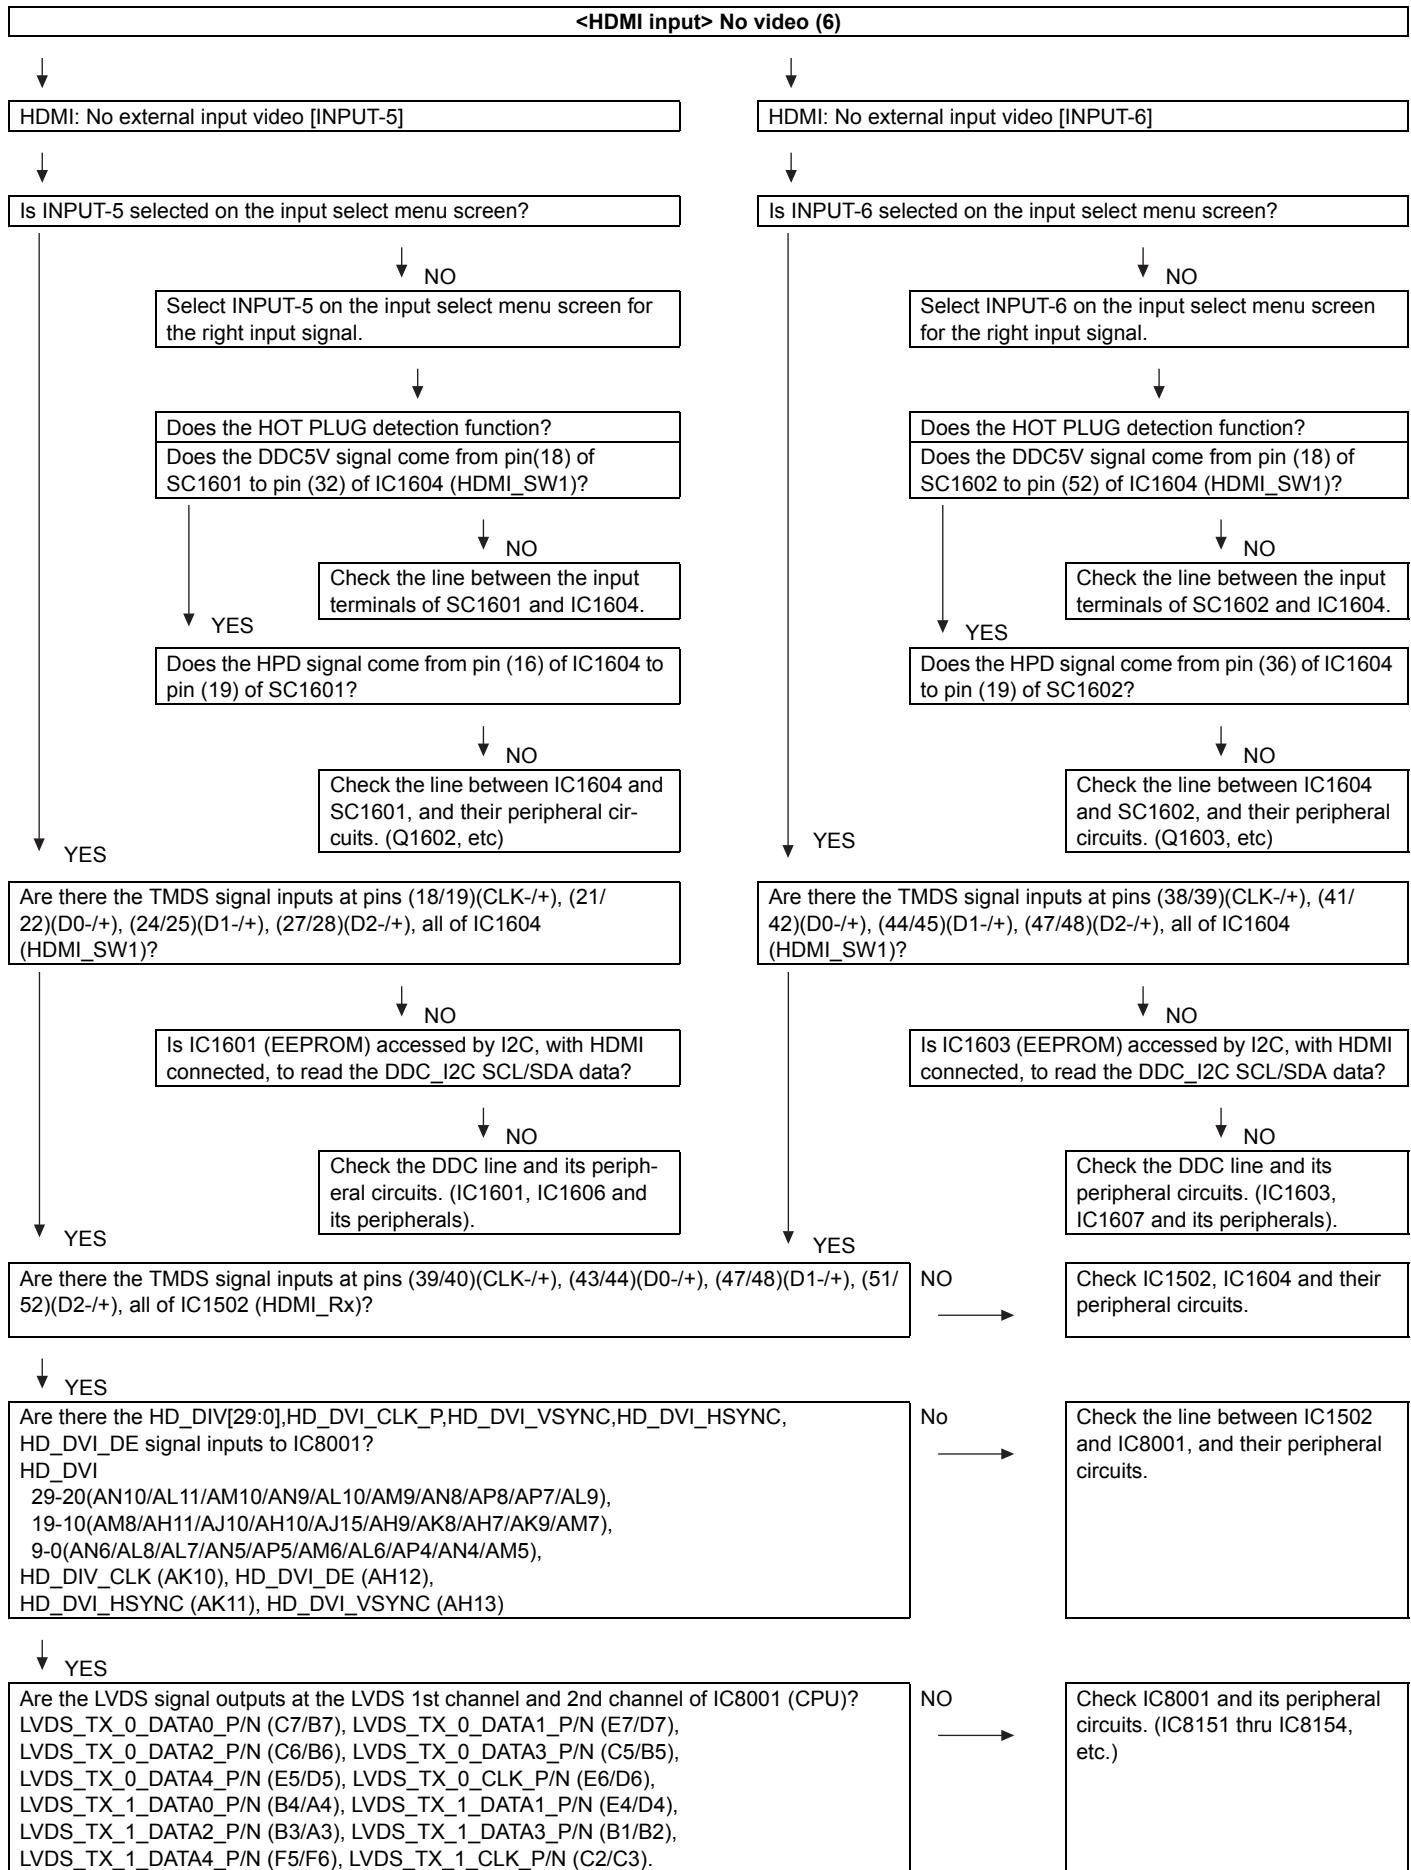

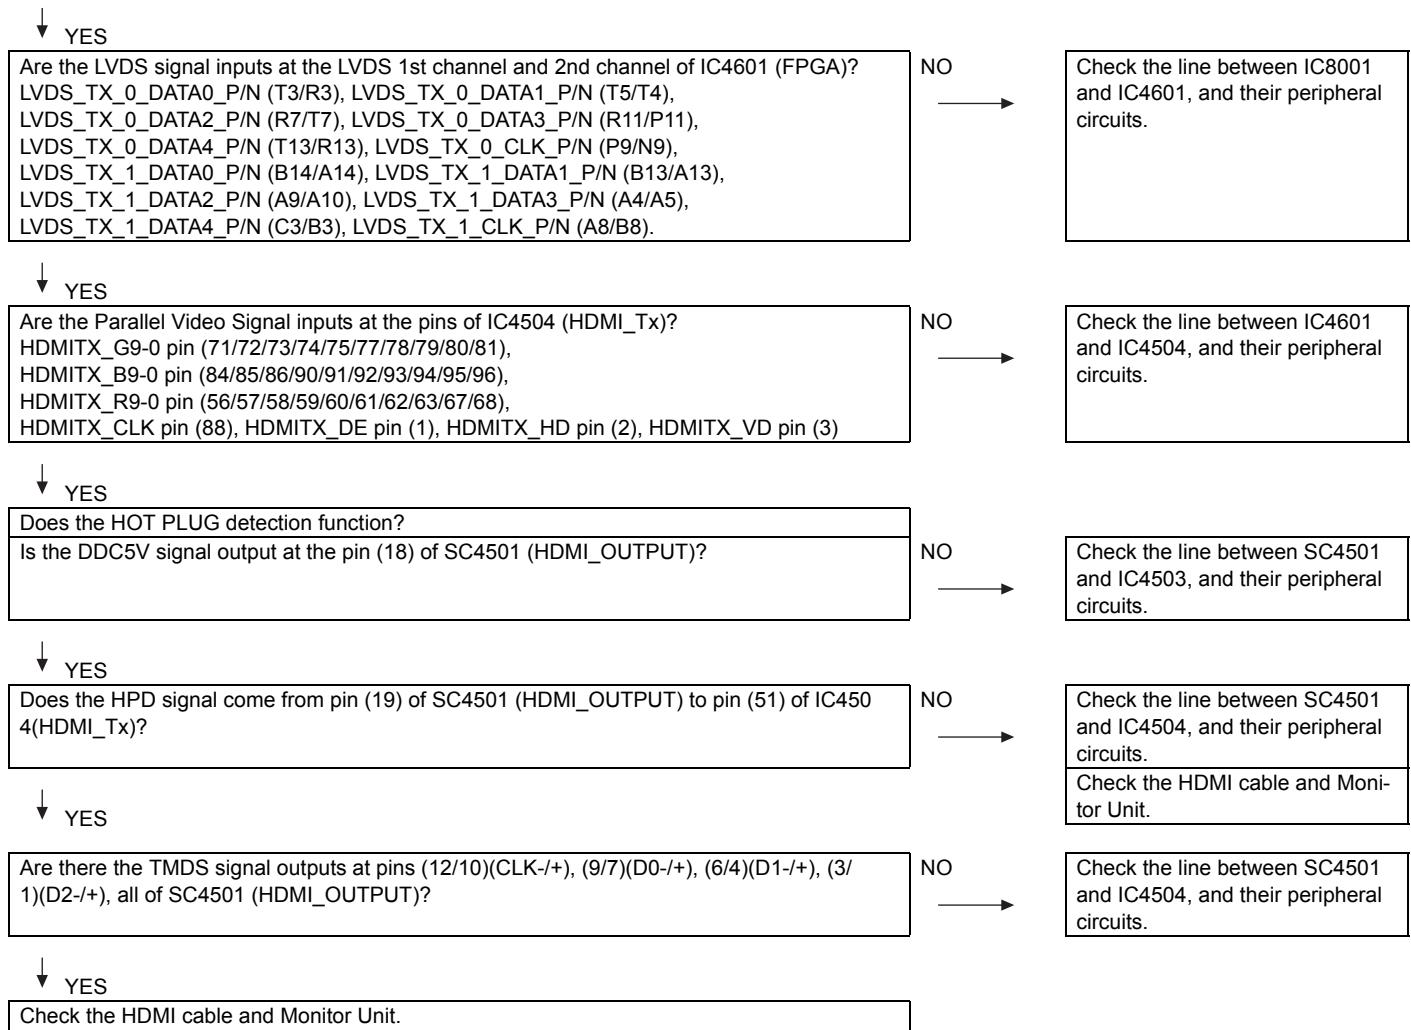

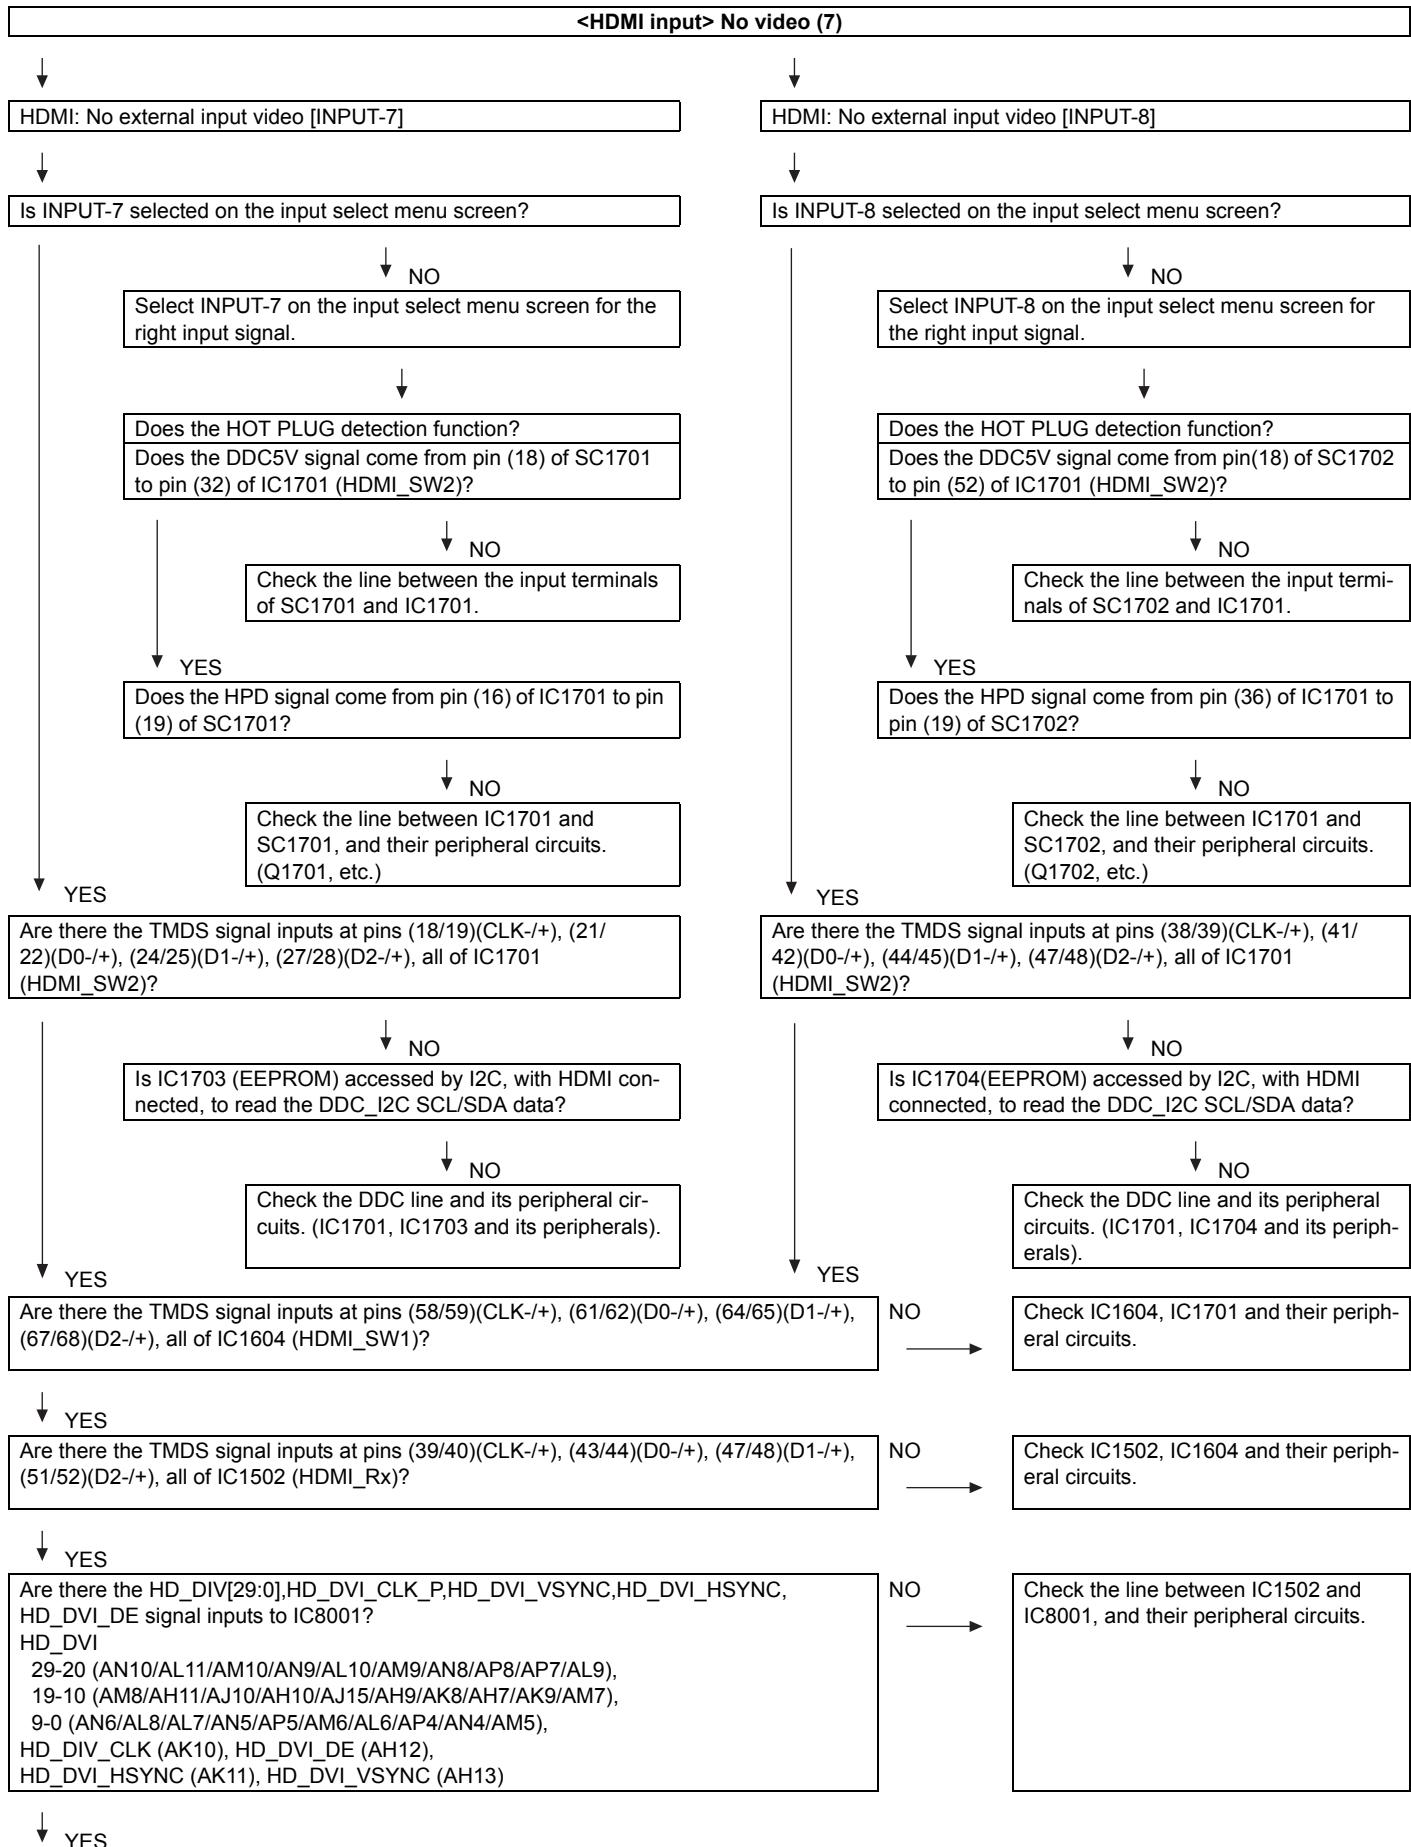

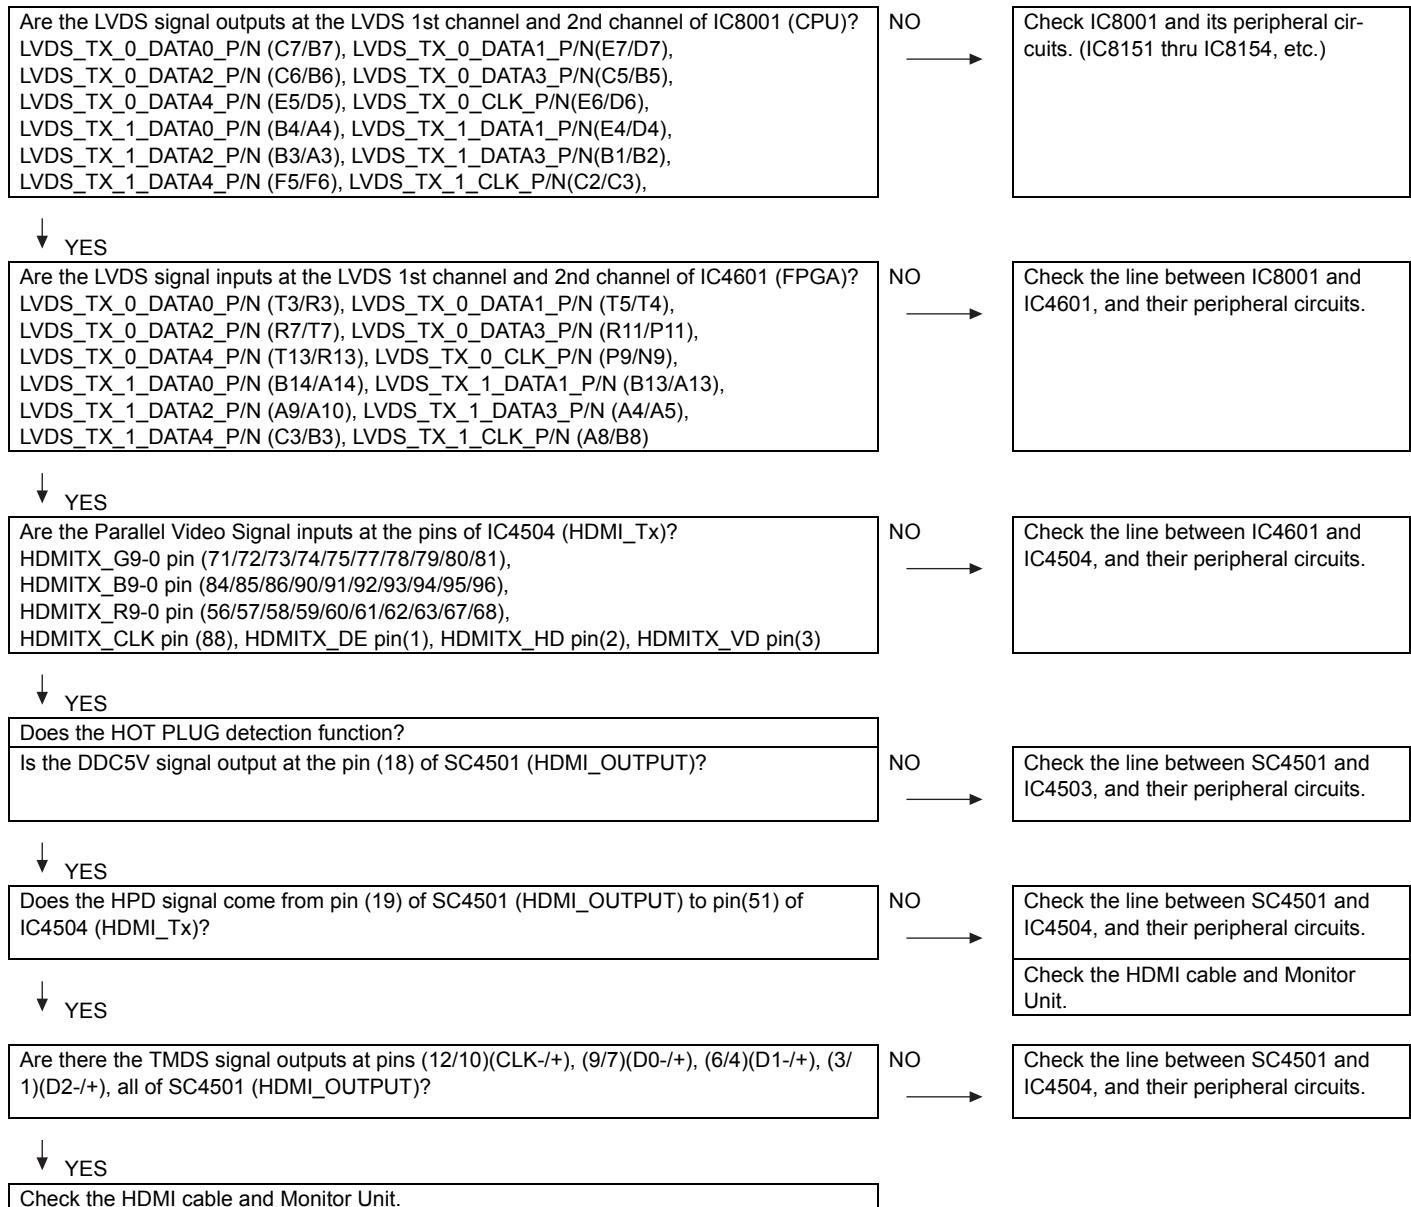

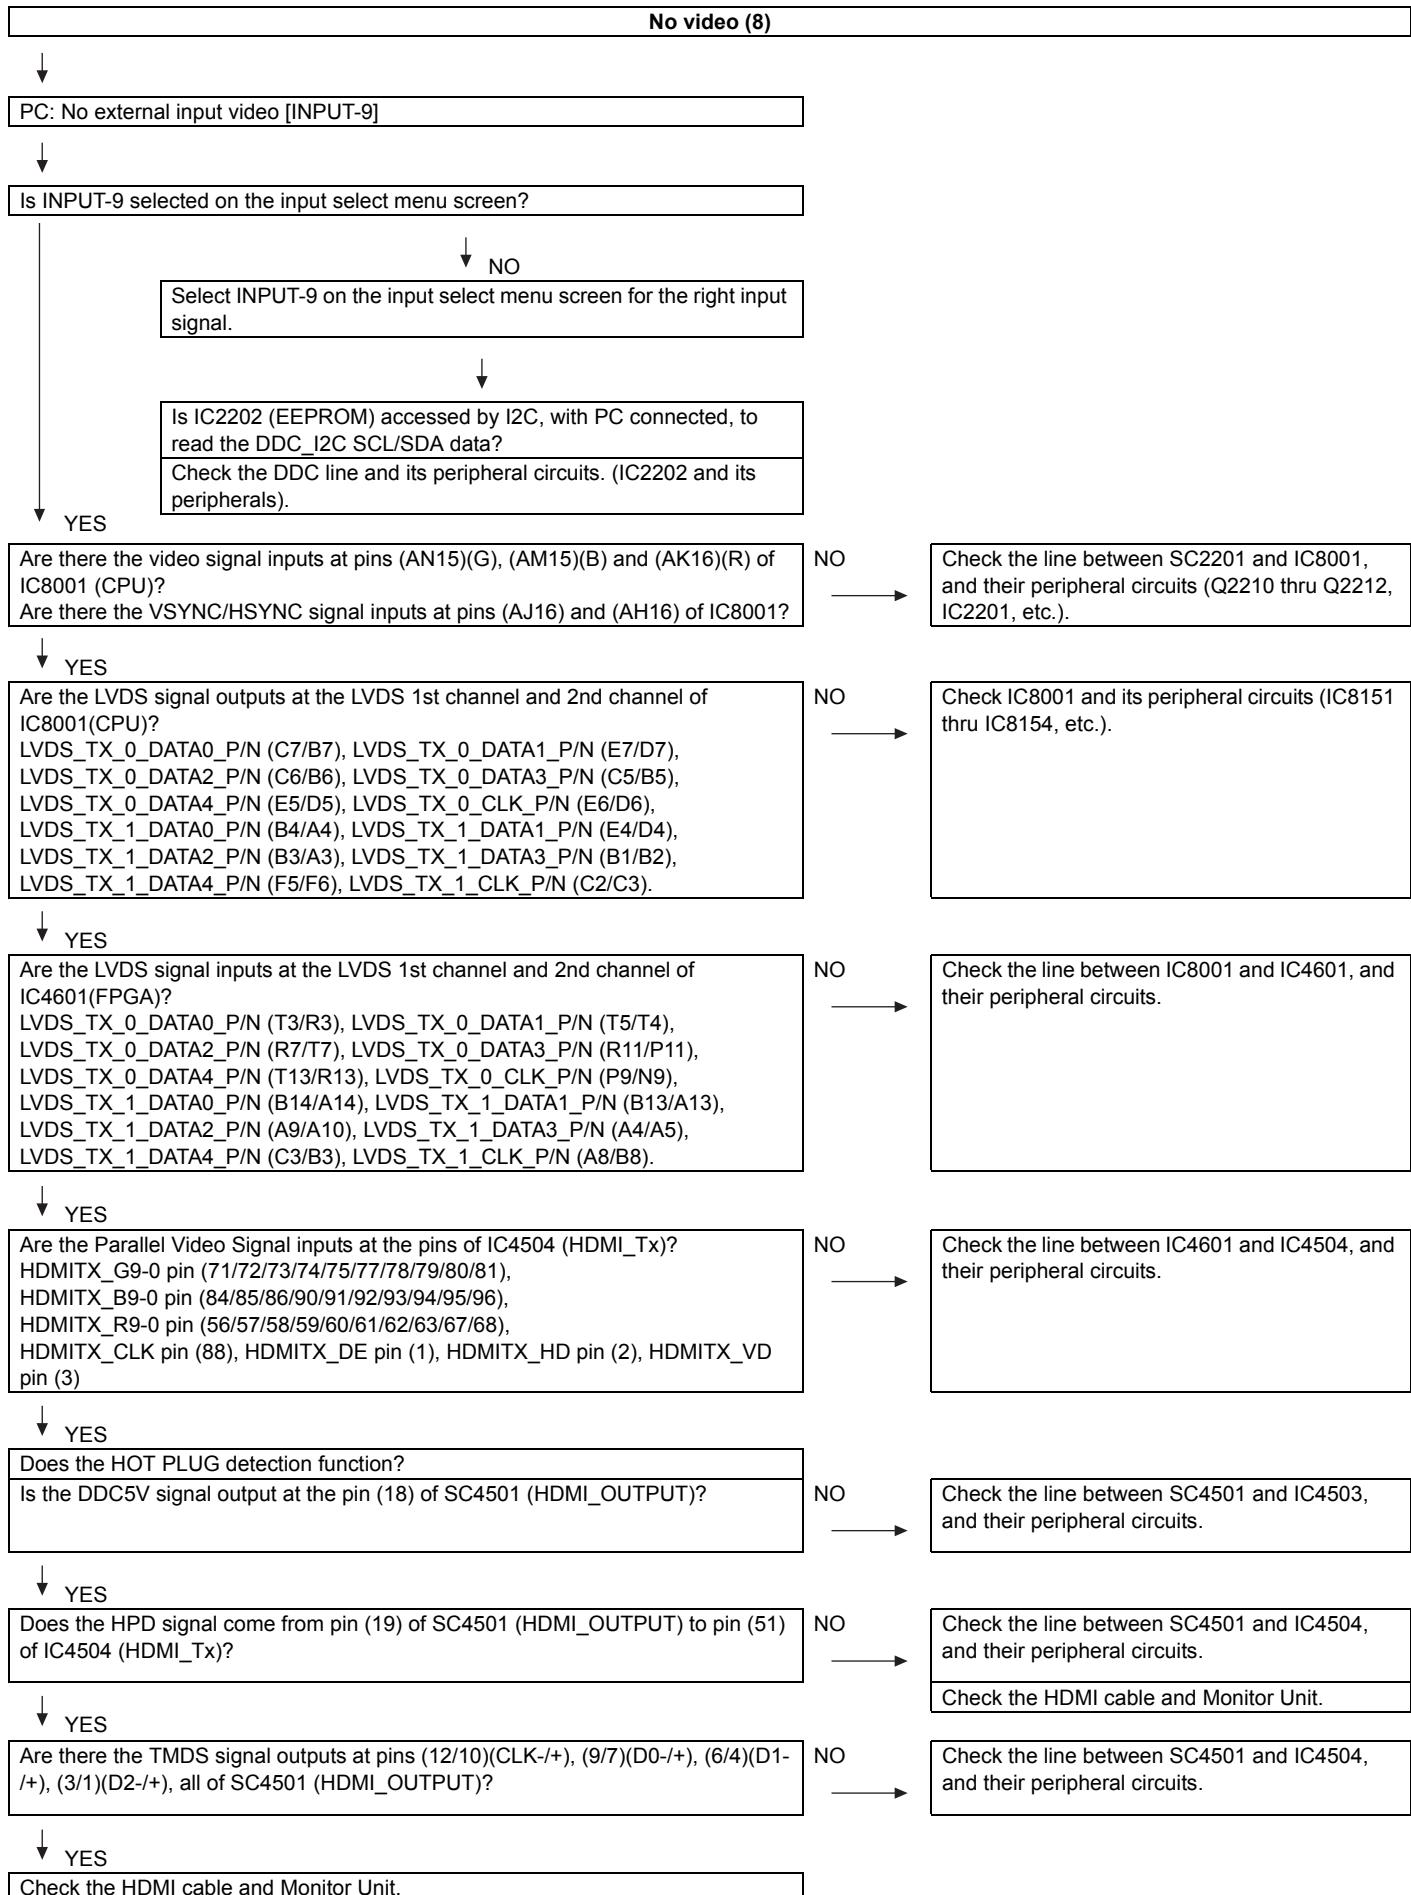

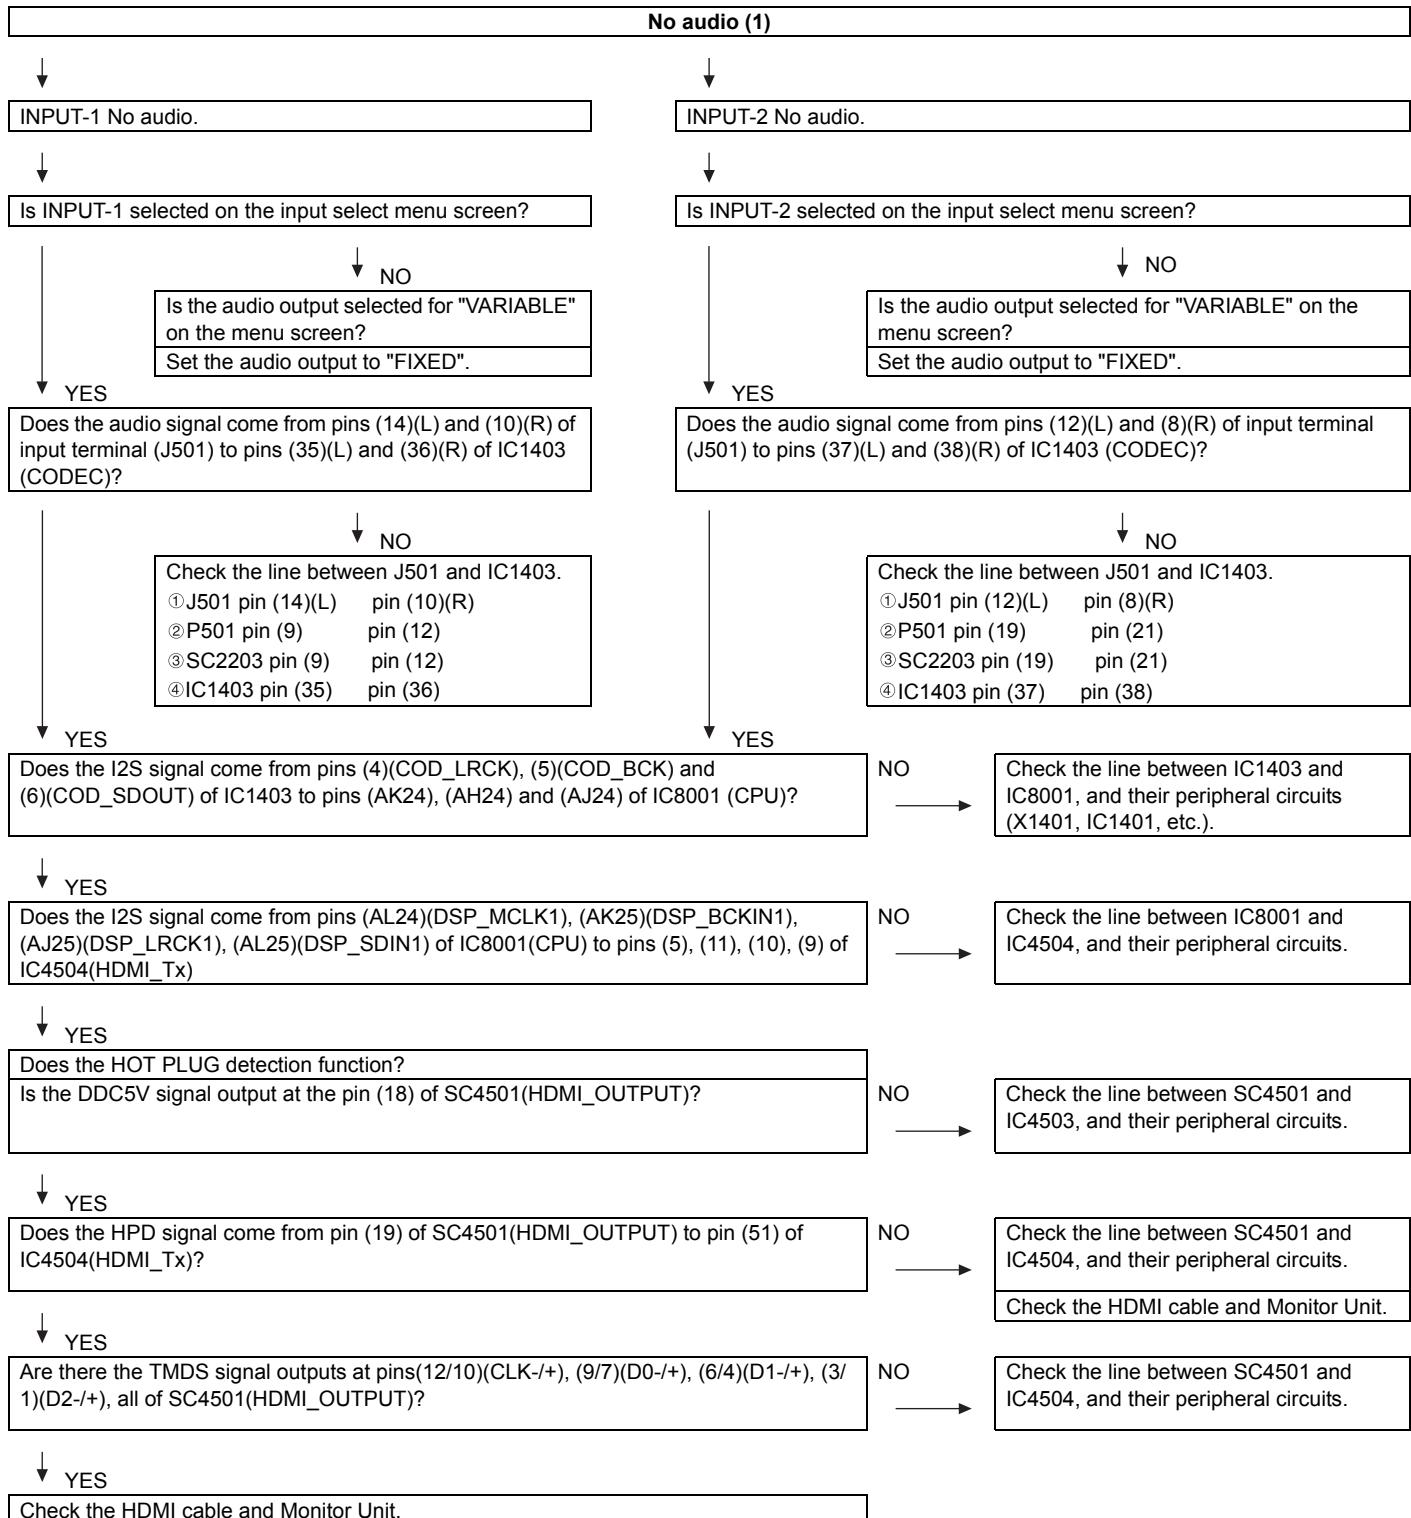

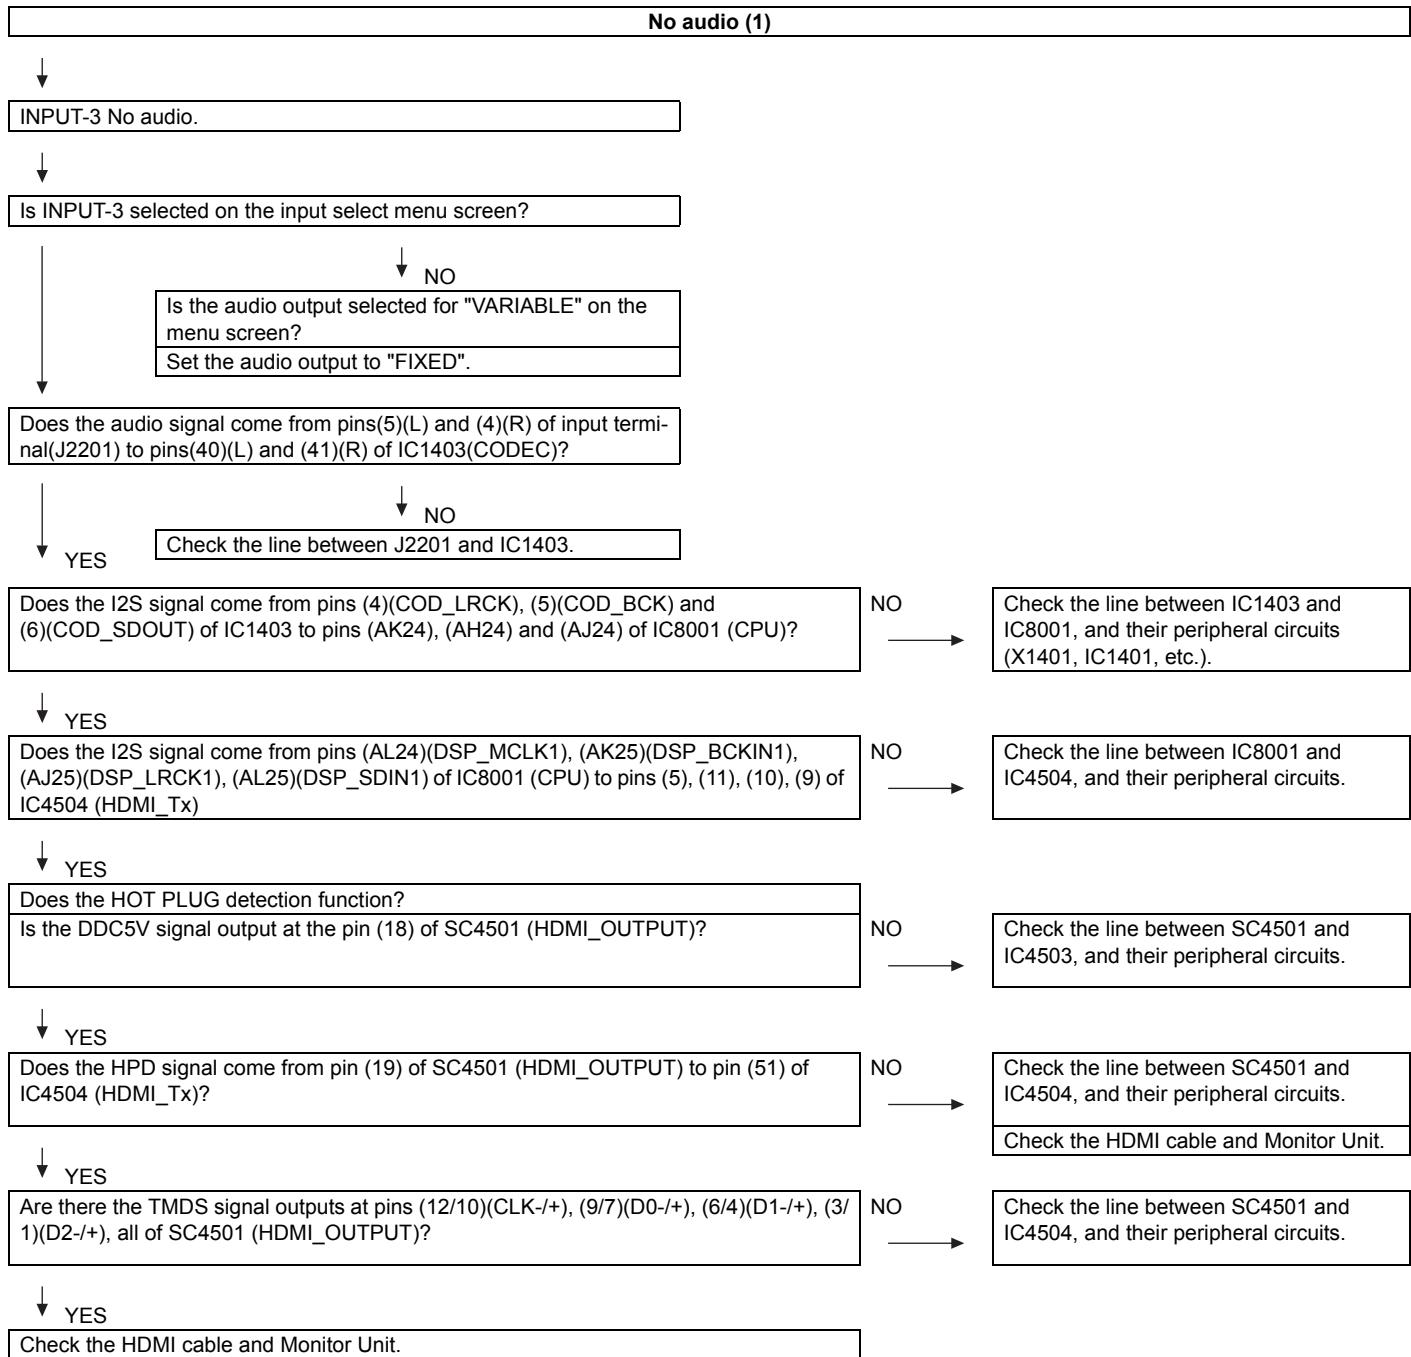

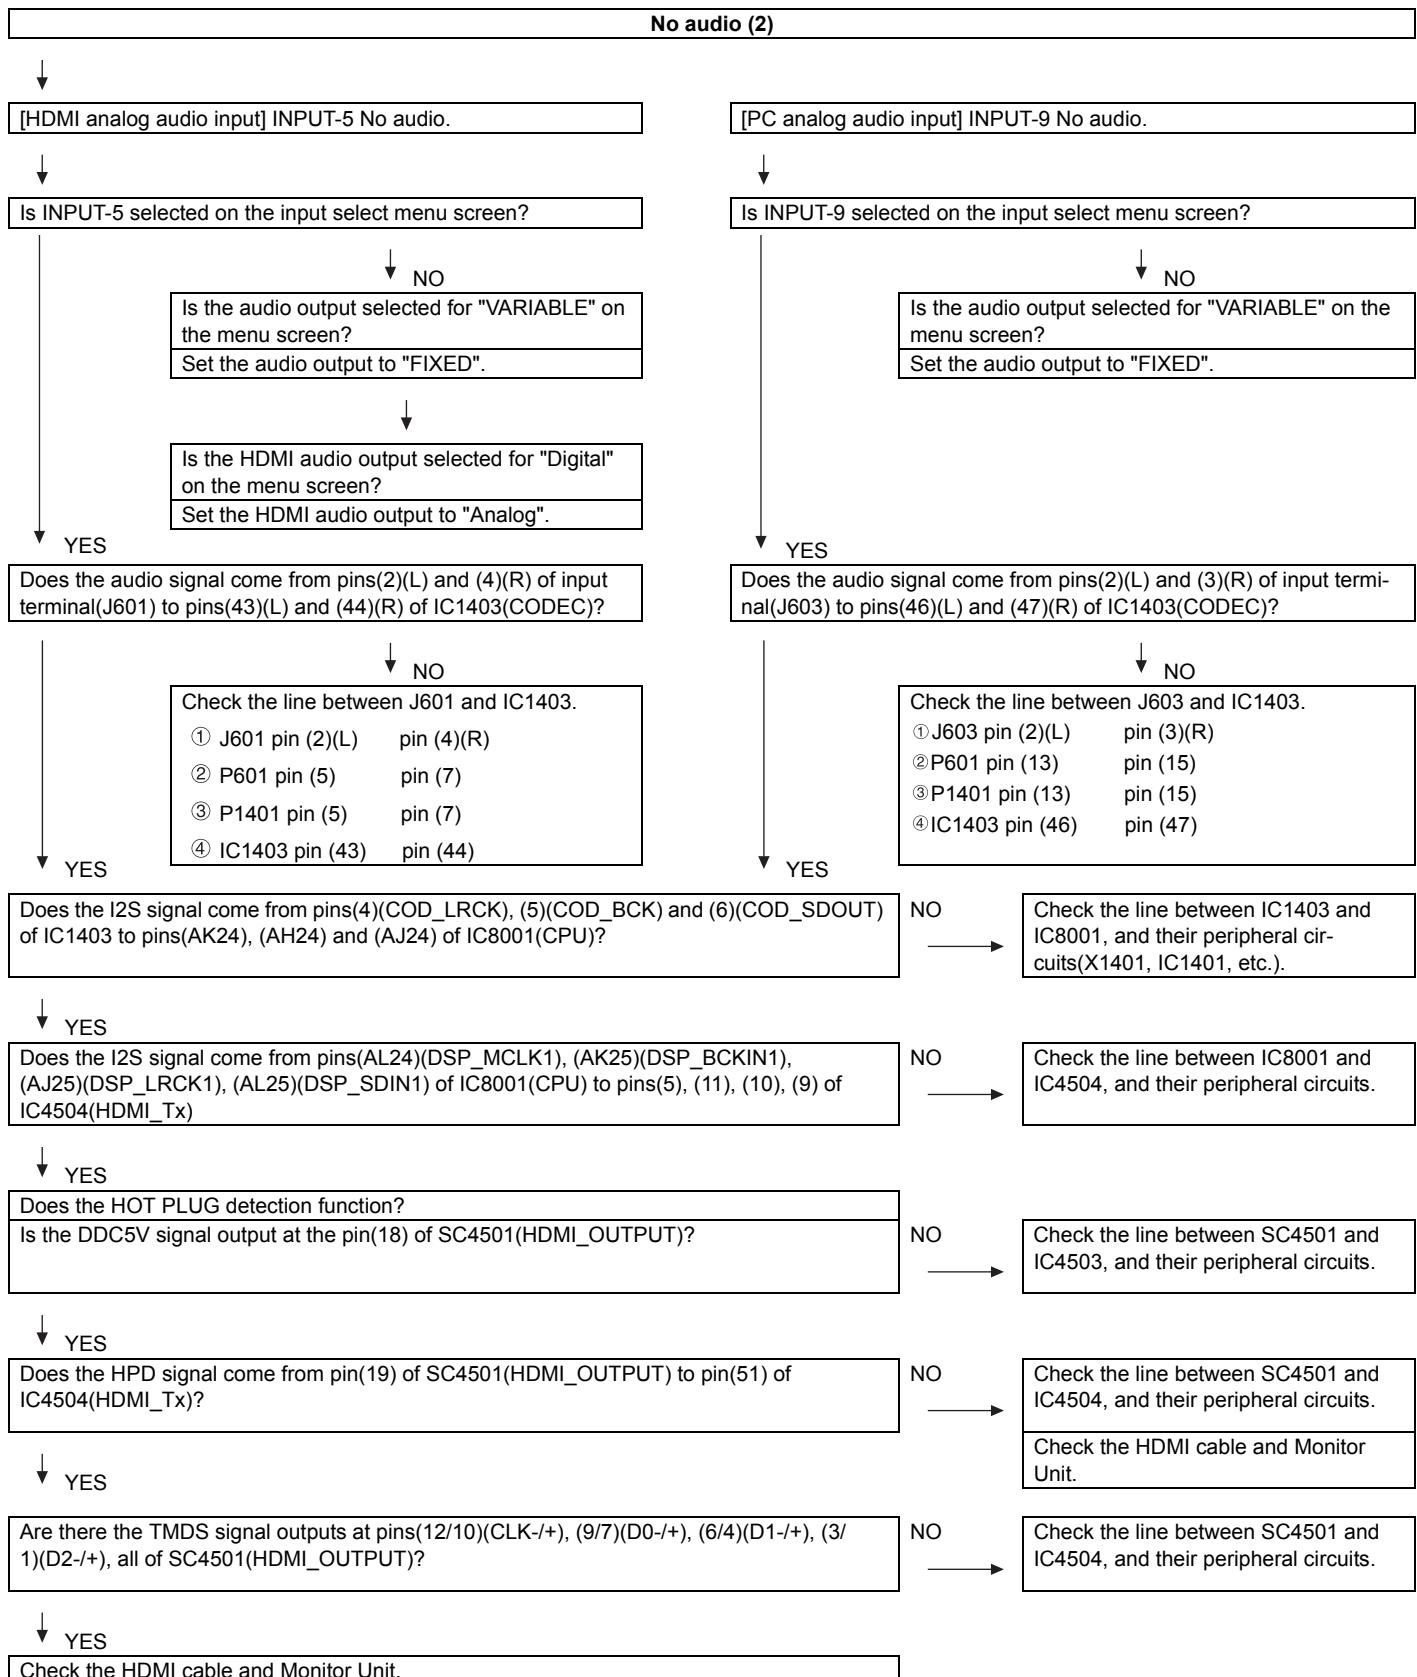

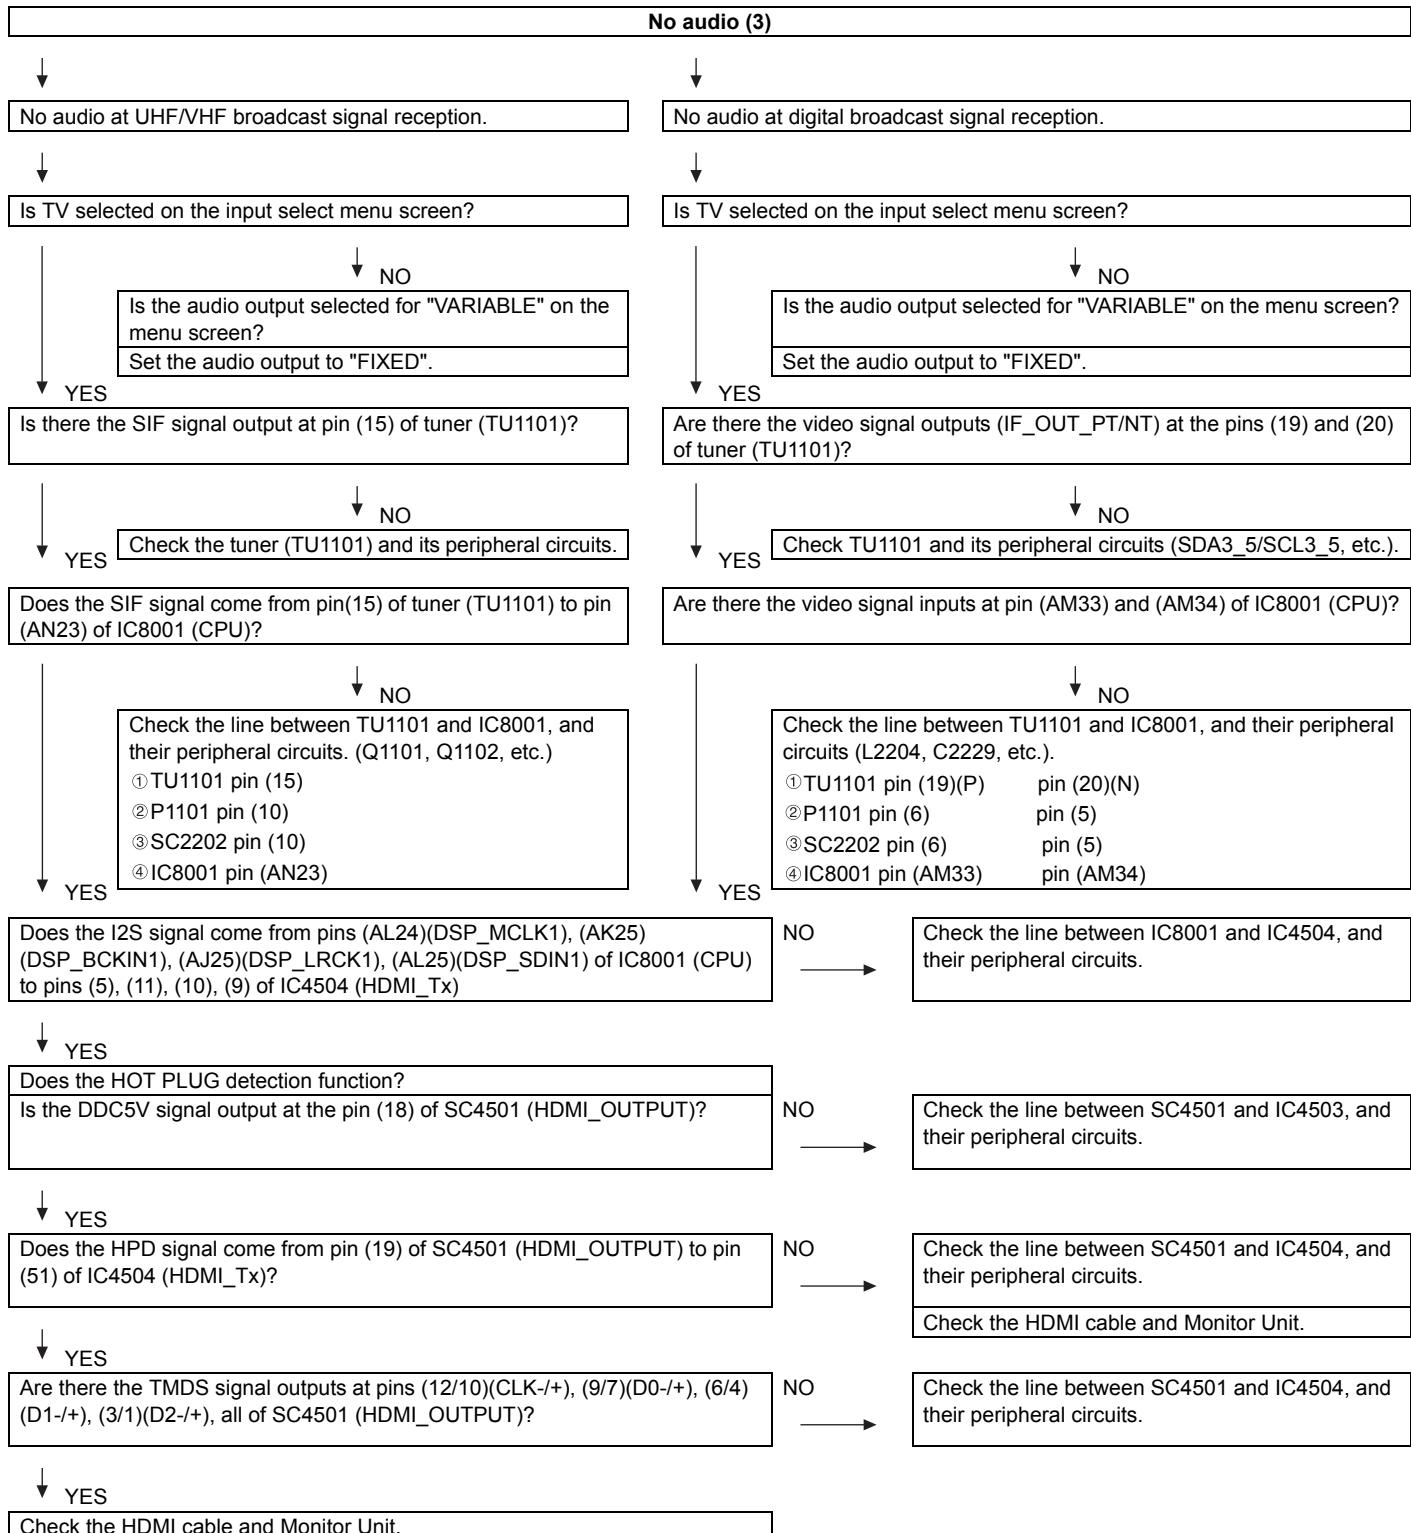

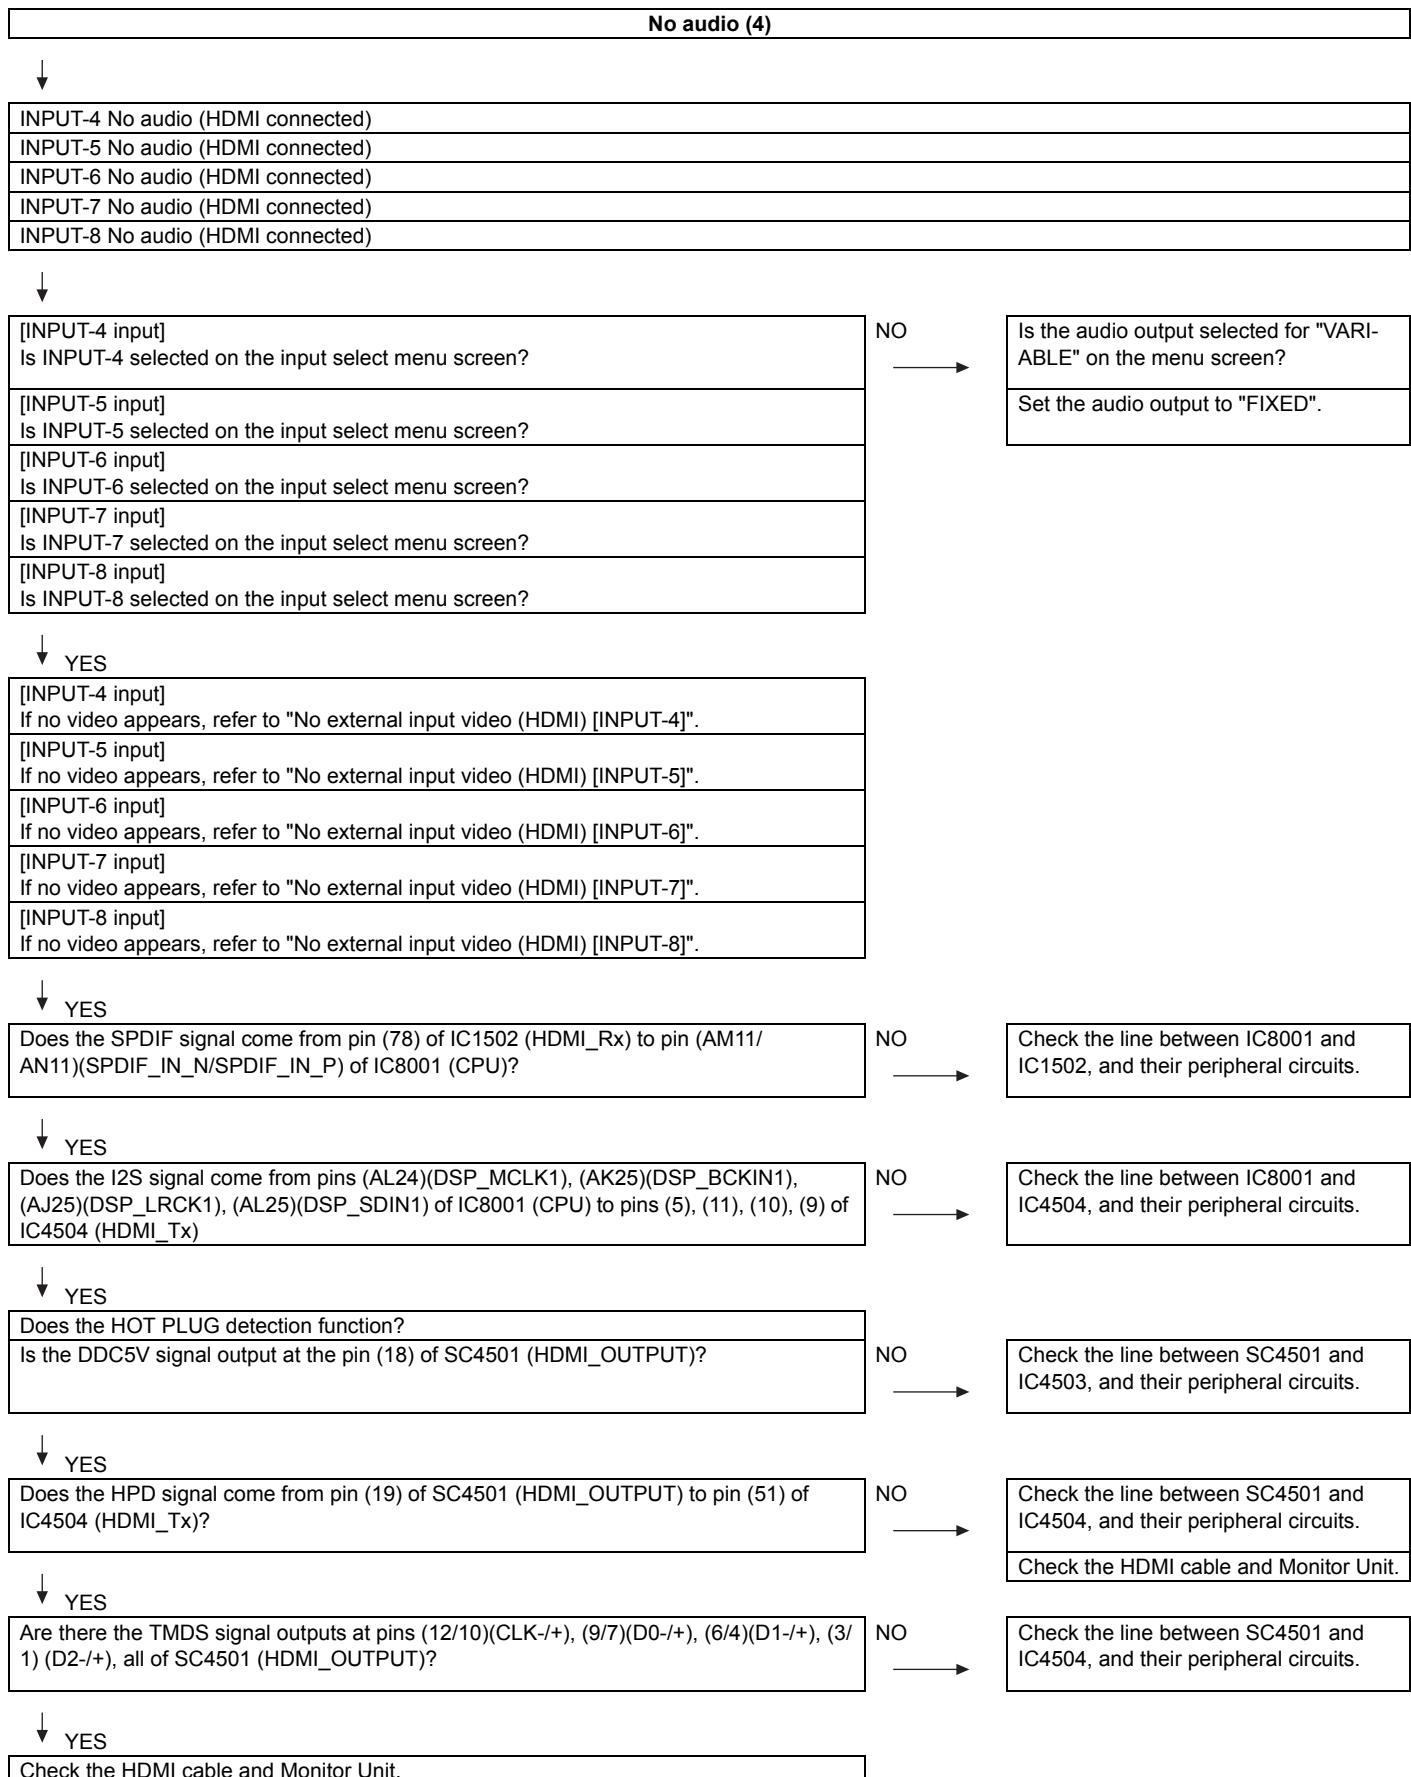

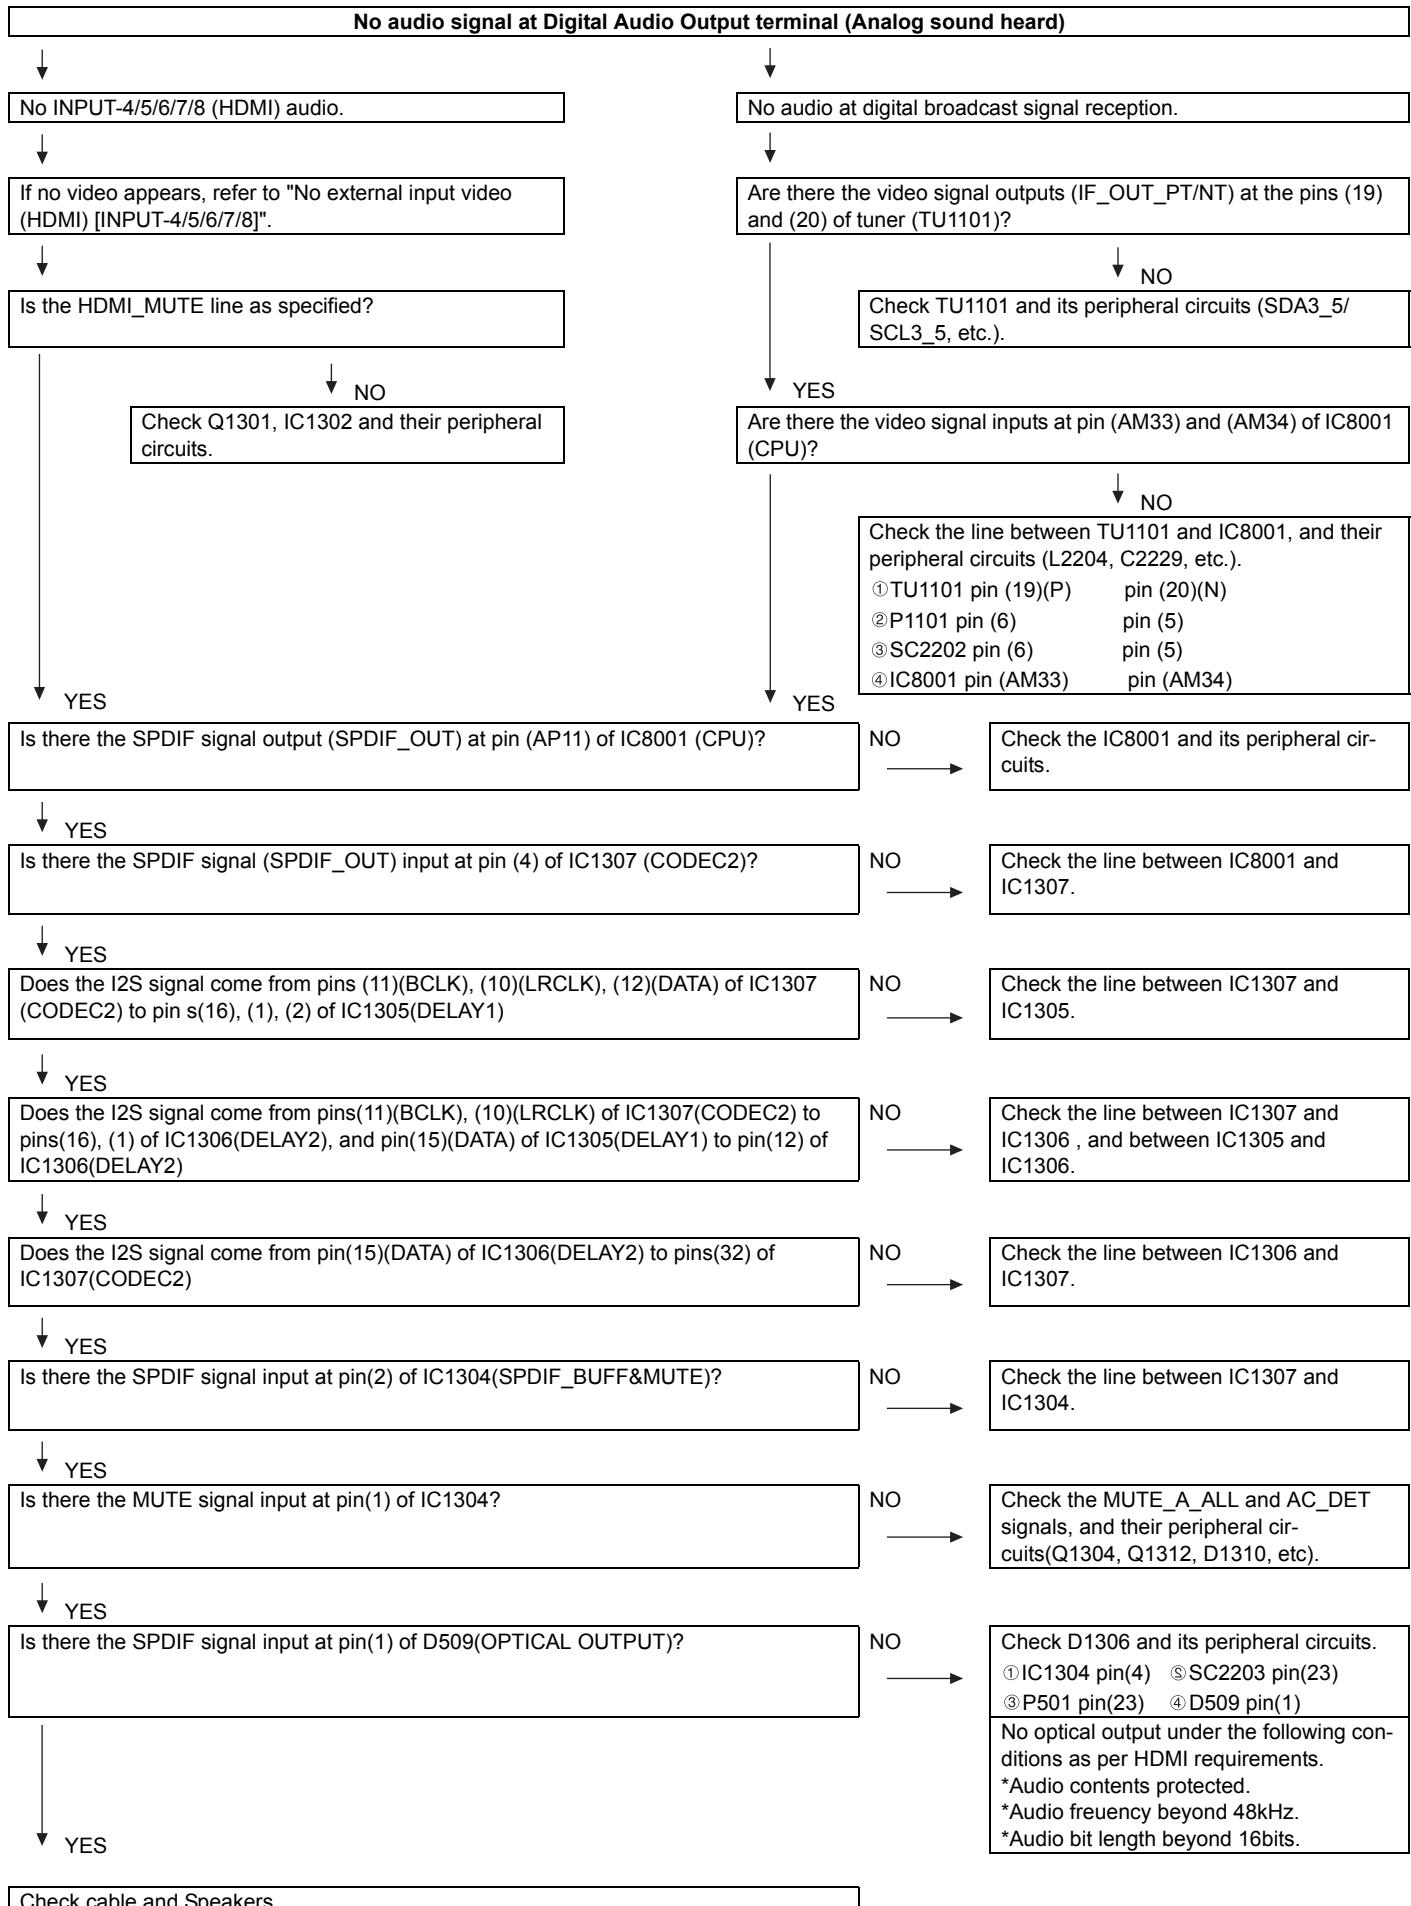

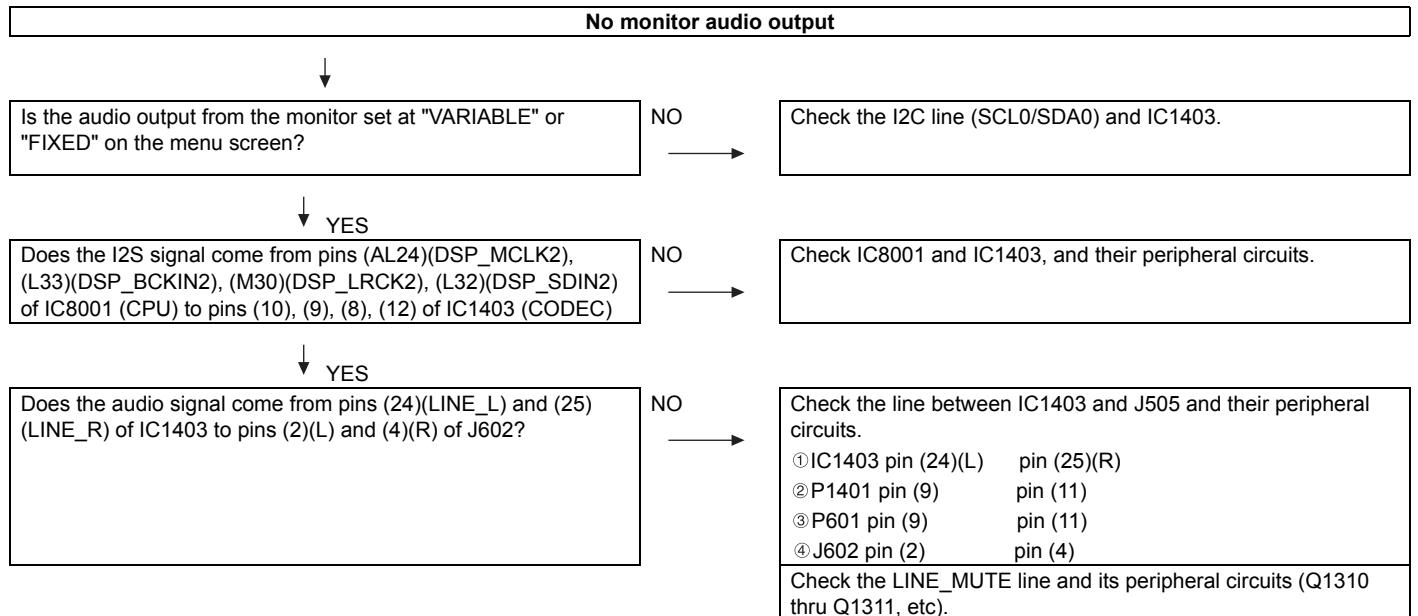

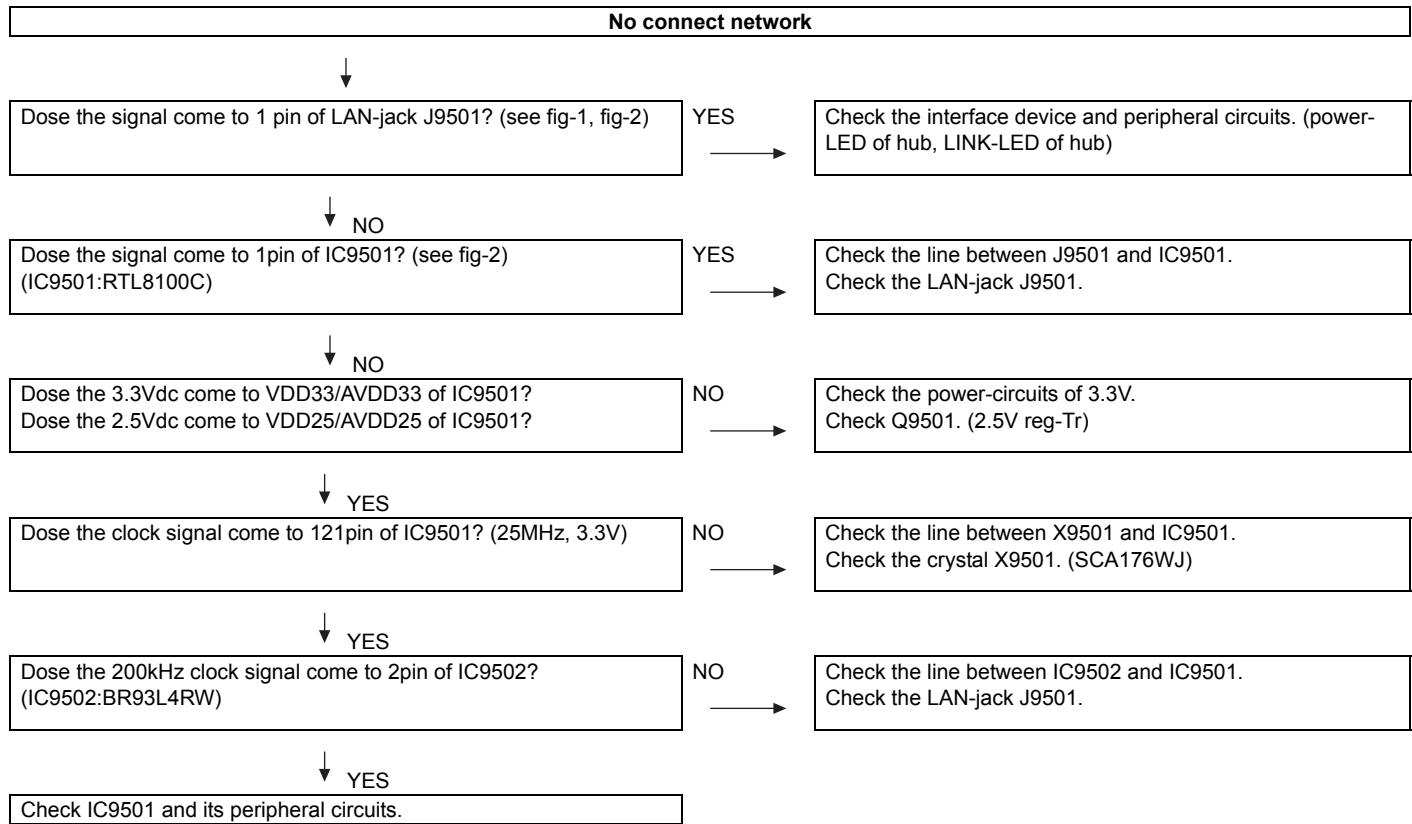

fig-1. LAN-jack J9501

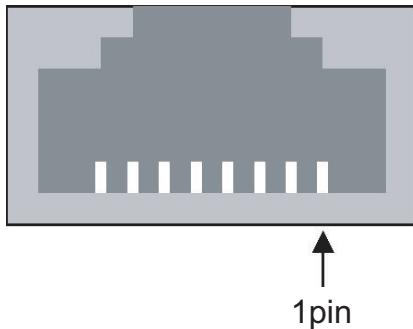

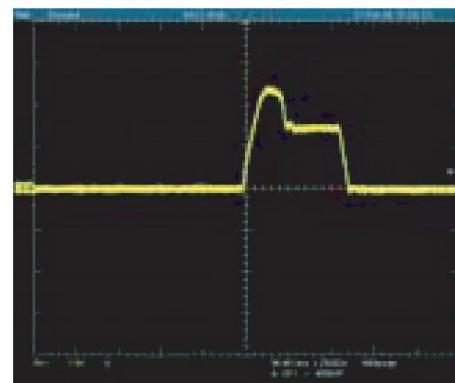

fig-2

When IC9502 is defective, it becomes a MAIN unit exchange.

CHAPTER 5. MAJOR IC INFORMATIONS

[1] MAJOR IC INFORMATIONS

IC1604 (VHiSii9185A-1Q)

This IC is TMDS switch device supporting Revision 1.3 of the HDMI Specification with three HDMI inputs and a signal output. This IC is used to select a single set of HDMI/DVI signals from three HDMI/DVI receiver-ports and to generate a fully compliant HDMI/DVI stream as an output. This includes DDC switching, Individual HPD control, and 5V sense. The HDMI output signal is sent to IC1502(HDMI receiver).

IC1701 (VHiSii9185A-1Q)

Please refer to the above sentence. This IC is used to select a single set of HDMI/DVI signals from two HDMI/DVI receiver-ports. The HDMI output signal is sent to IC1604(TMDS switch).

IC1502(VHiSii9135A-1Q)

This IC is HDMI 1.3 receiver. This is used to select either the signal from IC 1604 or the HDMI signal from Input1. In addition, this IC is used to convert TMDS into 30-bit digital signal (RGB/YCbCr) and outputs them to IC 8001.

IC1307 (VHiAK4683EQ-1Q)

This IC is used for OPT output. S/PDIF signal from IC8001 is converted into I2S signal by this IC. I2S signal is sent to IC1305,IC1306 (I2S delay IC) to adjust time difference between video and audio and the return-signal is converted into S/PDIF again by IC1307. Finally, IC1307 sends the signal to OPT connector.

IC1403 (VHiAK4682AE-1Y)

This IC provides for 2-channel A/D and 4-channel D/A (192-kHz sampling). The analog audio signal from each input (INPUT1,2,3 (analog audio for Composite, component, S-terminal) or INPUT-6 (HDMI-analog audio) or INPUT-7 (RGB-analog audio)) is fed into this IC for selection. The selected signal is converted into digital signal (I2S) and flows into the video signal processing circuit IC8001 (RH-iXC552WJQZQ). I2S signal which is processed by DSP included in IC8001 is sent to IC4504 for HDMI output or returns to IC1403 for analog-audio output.

IC4601 (RH-iXC423WJQZQ)

This IC is FPGAs and is designed to have the function to convert LVDS which IC 8001 outputs into 30bit digital signal (RGB, YCbCr). These signals are sent to IC4504 (HDMI_Tx).

IC4504 (VHiSii9134+-1Q)

This IC is HDMI Transmitter supporting the DHMI 1.3. This IC receives 30bit digital signals which IC8001 outputs and outputs TMDS to HDMI connector (SC4501). This IC comes pre-programmed with HDCP keys and provides the highest level of HDCP key security available. This IC is capable of supporting the resolutions of up to 1080p.

IC2002 (RH-iXC331WJN1Q)

The monitor microprocessor is intended to communicate with the main microprocessor and to operate the system. It also controls power of the entire system.

IC8001 (RH-iXC552WJQZQ)

This LSI is FULL HIGH-DEFINITION 1080P DIGITAL TV SYSTEM-ON-A-CHIP. It combines a cable/terrestrial 4/1024-QAM and 8/16-VSB receiver, a transport processor, a digital audio processor, a high definition (HD) MPEG video decoder, 2D graphics processing, digital processing of analog video and audio, analog video digitizer and DAC functions, stereo high-fidelity audio DACs, two HDMI receivers for 1080p60 inputs, a 330-MHz millions of instructions per second (MIPS) processor, and a peripheral control unit providing a variety of television control functions. The cable/terrestrial receiver directly samples a tuner output with an analog-to-digital (ADC) converter. The LSI digitally resamples and demodulates the signal with recovered clock and carrier timing, filters and equalizes the data, and passes soft decisions to an ATSC A/53 and ITU-T J.83 Annex A/B/C-compatible decoder. It has an MPEG-2 Digital Video Broadcasting (DVB)-compliant transport processor with advanced section filtering capability, DVB descrambler, and an MPEG-2 (MP@HL profile) video decoder. Audio support includes a BTSC and a Dolby AC3/MPEG-2 Layer 1, 2, audio decoder. The LSI provides analog and digital audio/video outputs. A SPDIF output and a pair of analog outputs (L-R) are provided via the integrated audio DACs. The NTSC analog video decoder is supported by its own motion adaptive deinterlacing and 3D comb filtering, including 1080i deinterlacing. The LSI includes advanced 2D graphics processing. Two transport stream inputs are included. The LSI incorporates a complete MIPS32(r)-based microprocessor sub-system including caches with bridging to memory and a local bus, where external peripherals can be attached. Integrated peripherals include two USB 2.0, three UARTs, counter/timers and GPIO controllers.

IC8151,IC8152,IC8153,IC8154(RH-iXC187WJQZQ)

These ICs are 512Mb DDR. These have the function to store the temporary data IC8001 handles.

TU-X1U

IC8452 (RH-iXC418WJQZQ)

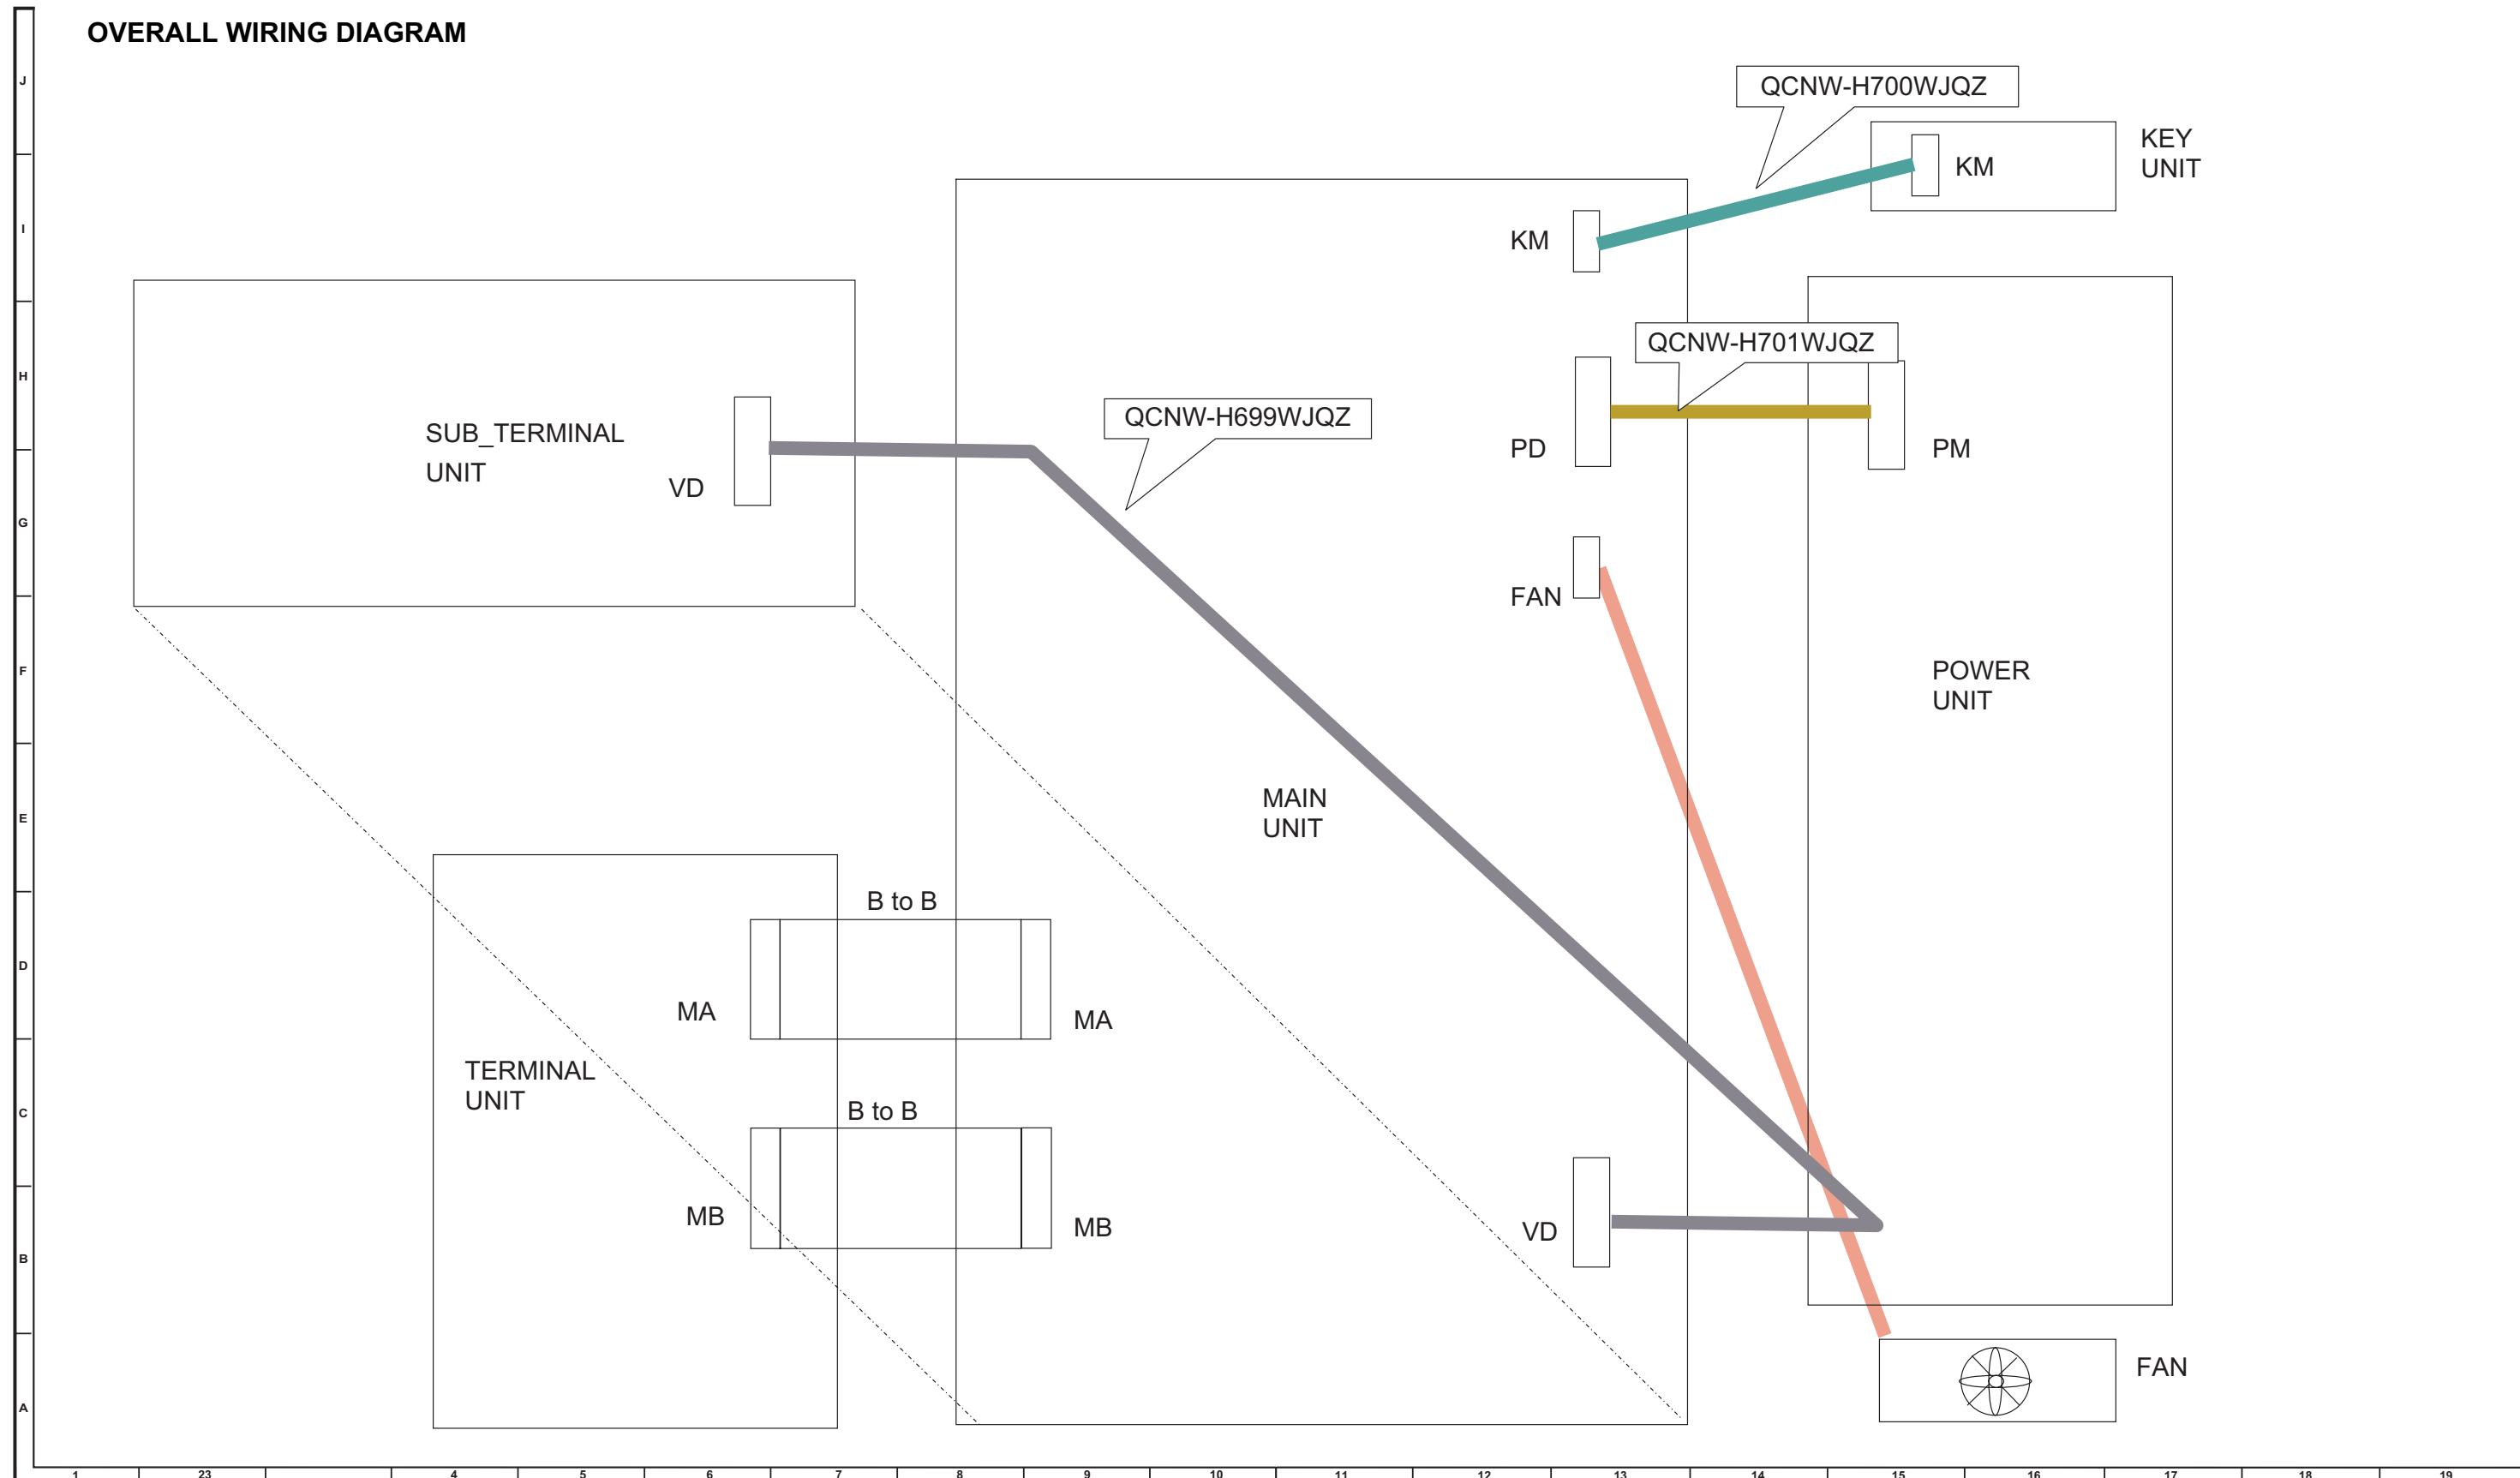

The 256-Mbit page mode flash memory device stores the main CPU program.

IC9501 (VHiRTL8100C-1Q)

This IC is Ethernet controller that provides 32-bit performance, PCI bus master capability, and full compliance with IEEE 802.3u 100Base-T specifications and IEEE 802.3x Full Duplex Flow Control. It also supports the ACPI.

CHAPTER 8. SCHEMATIC DIAGRAM

[1] DESCRIPTION OF SCHEMATIC DIAGRAM

1. VOLTAGE MEASUREMENT CONDITION:

- 1) The voltages at test points are measured on exclusive AC adaptor and the stable supply voltage of AC 120V. Signals are fed by a color bar signal generator for servicing purpose and the above voltages are measured with a 20k ohm/V tester.

2. INDICATION OF RESISTOR & CAPACITOR:

RESISTOR

- 1) The unit of resistance " Ω " is omitted.
(K=k Ω =1000 Ω , M=M Ω).
- 2) All resistors are $\pm 5\%$, unless otherwise noted.
(K= $\pm 10\%$, F= $\pm 1\%$, D= $\pm 0.5\%$)
- 3) All resistors are 1/16W, unless otherwise noted.

CAPACITOR

- 1) All capacitors are μF , unless otherwise noted.
(P=pF= $\mu\mu\text{F}$).
- 2) All capacitors are 50V, unless otherwise noted.

CAUTION:

This circuit diagram is original one, therefore there may be a slight difference from yours.

SAFETY NOTES:

- 1) DISCONNECT THE AC PLUG FROM THE AC OUTLET BEFORE REPLACING PARTS.
- 2) SEMICONDUCTOR HEAT SINKS SHOULD BE REGARDED AS POTENTIAL SHOCK HAZARDS WHEN THE CHASSIS IS OPERATING.

IMPORTANT SAFETY NOTICE:

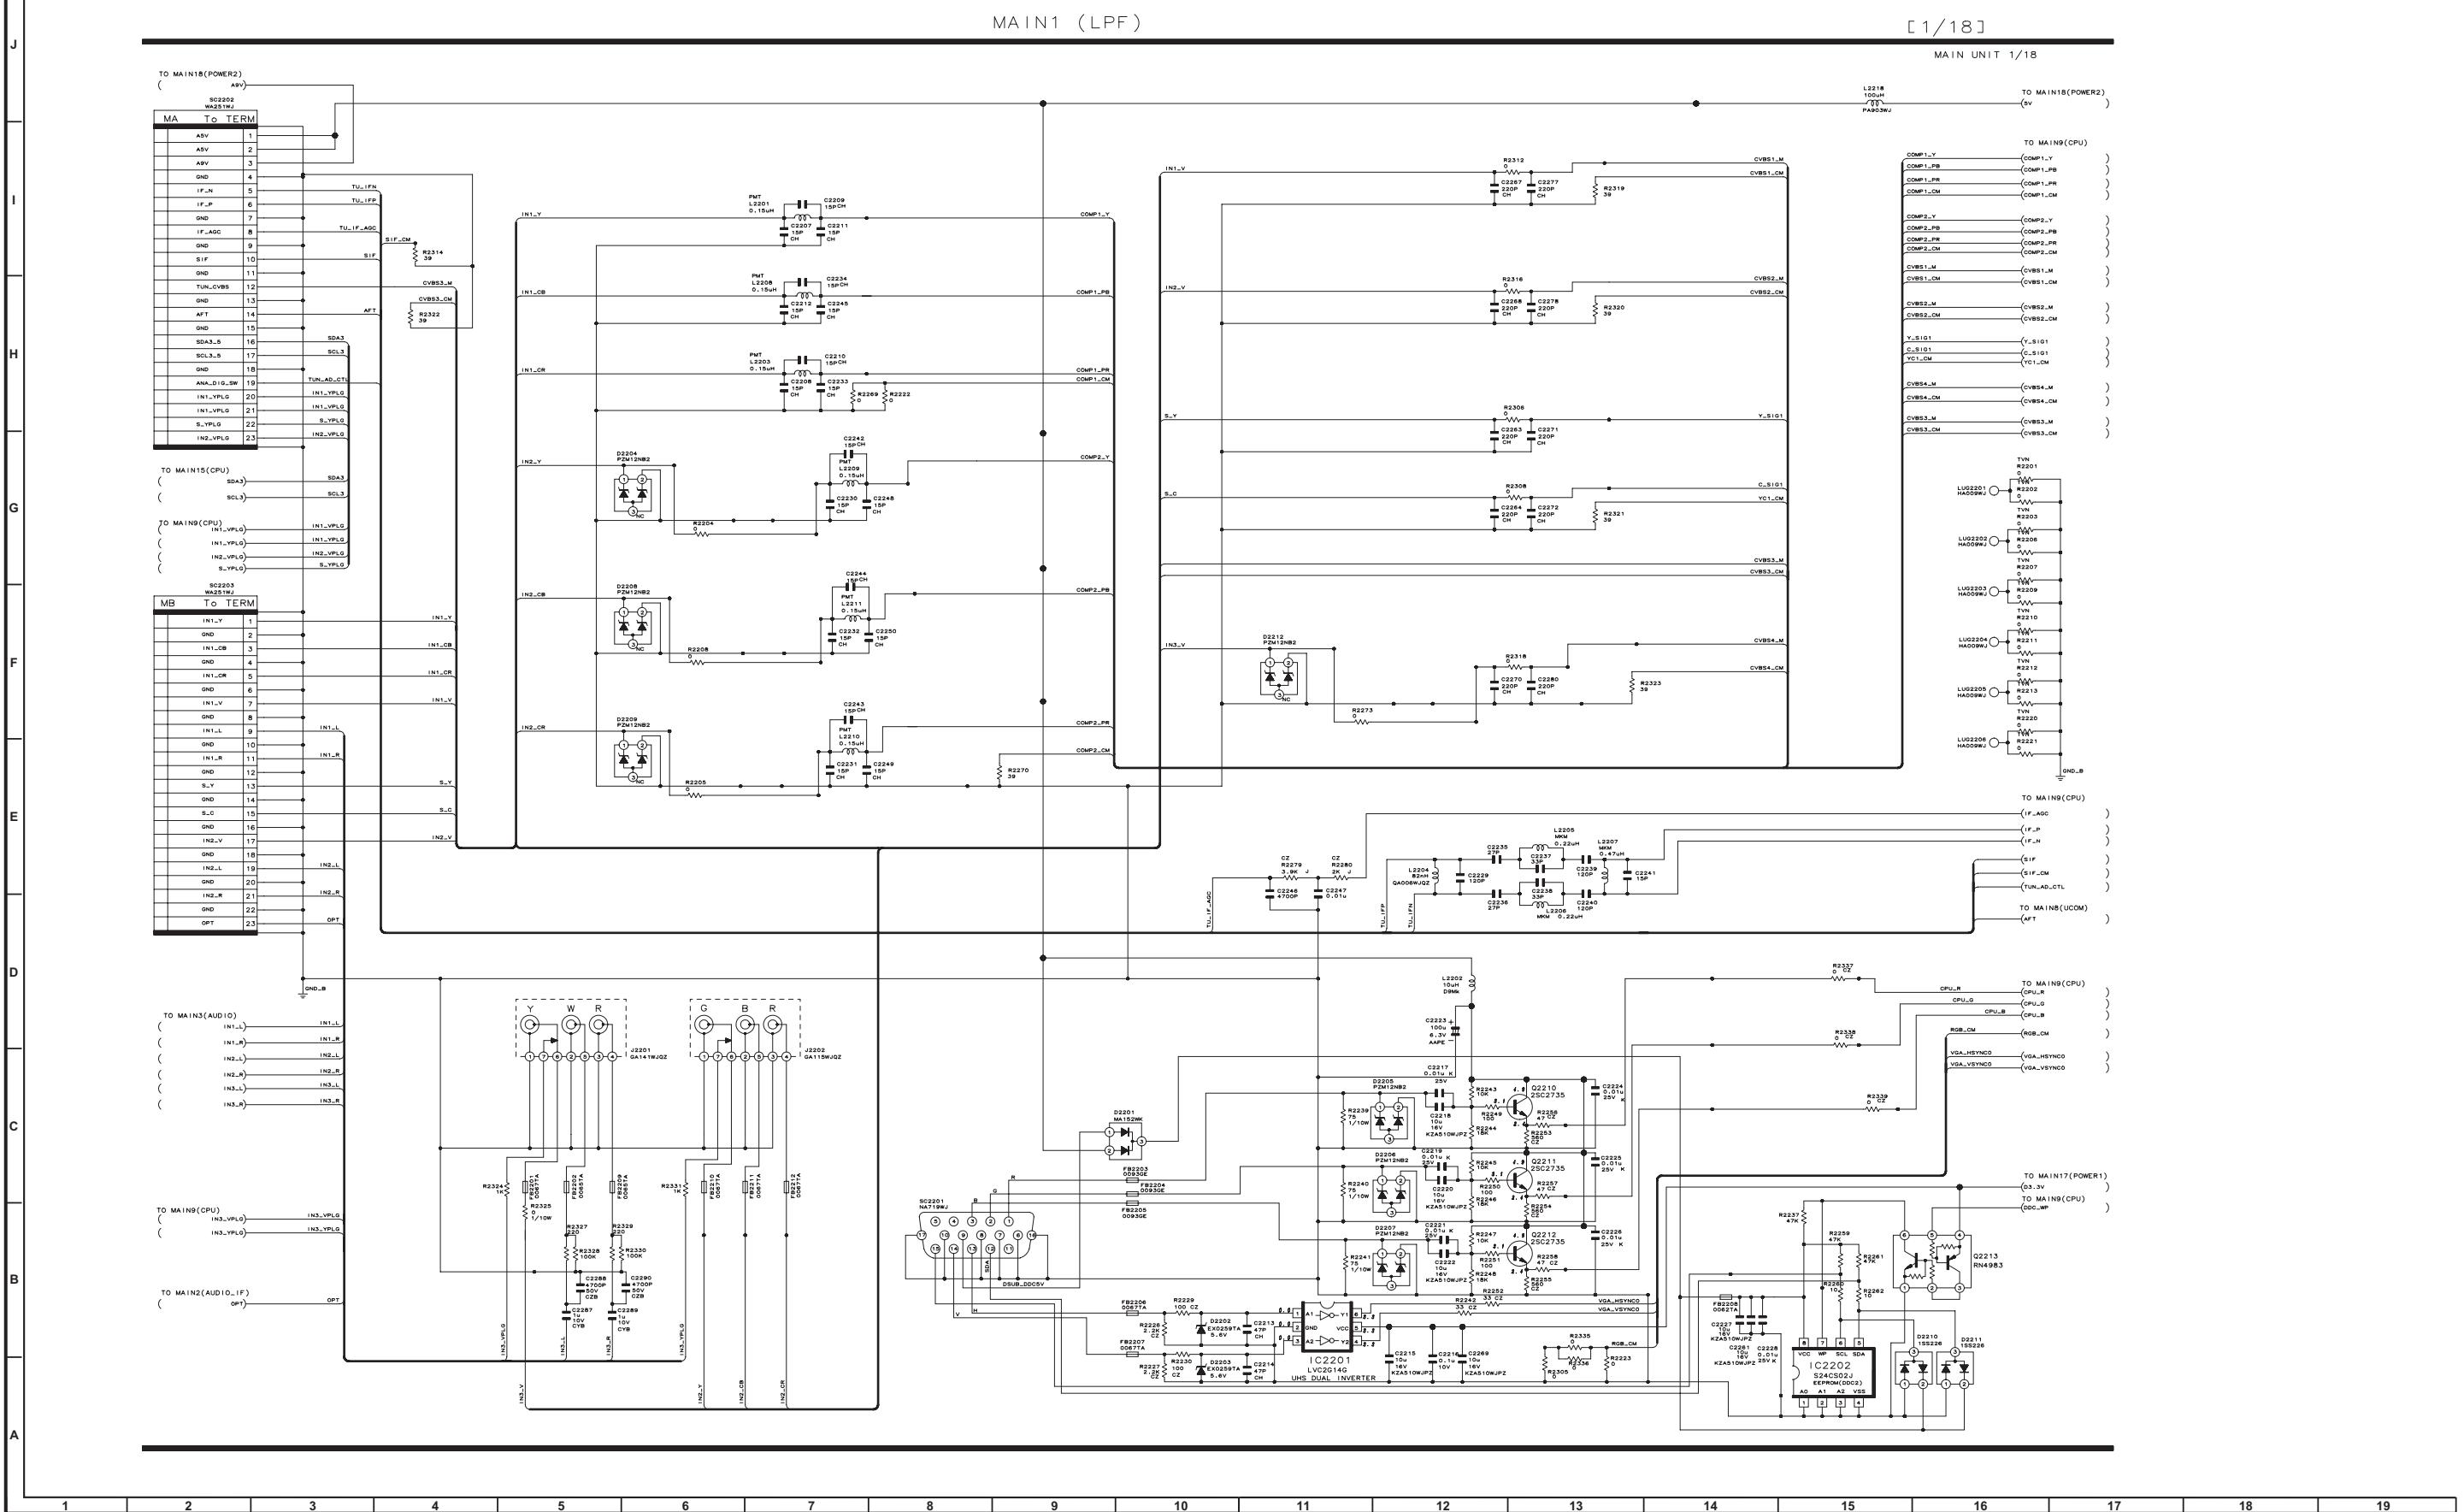

PARTS MARKED WITH "▲" () ARE IMPORTANT FOR MAINTAINING THE SAFETY OF THE SET. BE SURE TO REPLACE THESE PARTS WITH SPECIFIED ONES FOR MAINTAINING THE SAFETY AND PERFORMANCE OF THE SET.

AVIS DE SECURITE IMPORTANT:

LES PIECES MARQUEES "▲" () SONT IMPORTANTES POUR MAINTENIR LA SECURITE DE L'APPAREIL. NE REMPLACER CES PIECES QUE PAR DES PIECES DONT LE NUMERO EST SPECIFIÉ POUR MAINTENIR LA SECURITE ET PROTEGER LE BON FONCTIONNEMENT DE L'APPAREIL.
